1.0 EXECUTIVE SUMMARY

Phoenix Development (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 363 Bond Street, Brooklyn, NY. The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the subject site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

The subject property is a parcel located at 363 Bond Street (Block 452, Lot 1). The site is located in the in the borough of Brooklyn in the county of Kings. The subject property measures approximately 0.68 acres in size and is improved with a two story 32,000 square foot, commercial building. The site is utilized as a distributor for children's clothing.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule) and PWGC's proposal for services.

Potential recognized environmental conditions identified at the subject property were evaluated to determine whether items initially suspected to be recognized environmental conditions are in fact recognized environmental conditions. Evaluation of potential recognized environmental conditions (REC) are as follows:

Onsite

- The property has an extensive industrial history. Industrial uses have the potential to impact the sites soils and groundwater by means of improper handling of industrial chemicals and wastes. Historic industrial uses are typical more of a concern due to historically lax concerns for the environment and waste disposal. Based upon properties past use, which included automotive uses and a garage, this concern is a REC.
- Gasoline tanks were historically present at the property. Potential vent pipes to additional tanks were noted. Underground storage tanks (USTs) have the potential to impact the subsurface soils and groundwater as a result of leaks, spills or equipment failure, therefore the tanks represent a REC.
- A fuel oil AST is present in the basement of the building. Spills from ASTs can impact the subsurface soils and groundwater from the ground surface or through holes / voids in an impermeable surface (such as a concrete floor). Since the condition of the tank and surrounding area could not be assessed, the fuel AST represents a REC at this time.
- The property has an active spill / free phase petroleum is present at the water table. The presence of free phase petroleum is an obvious indicator that soil and groundwater impacts have occurred at the property. Environmental remediation will be required to remove the product and close the active spill issue with the NYSDEC. Given the active nature of this spill, it represent a REC. In addition, the presence

of site impacts can potential pose a sub-slab vapor / indoor air concern.

- Historic fill is present beneath the property. Historic fill typically contains elevated levels of petroleum products and metals. Historic fill material typically doesn't require remediation, however fill material which is removed during any site work is not suitable for re-use and will require proper disposal, and therefore this concern is a REC.
- The property has an "e" designation for an air issue. "e" Designations for air issues typically stem from the presence of air emission sources in the vicinity of the property. The nature of this "e" designation should be further assessed, since an open "e" designation will impact any redevelopment plans for the property. Due to the presence of the "e" designation, future development of the property may require special design considerations such as special window and HVAC requirements.

Offsite

- The subject property is located adjacent to the Gowanus Creek, which is identified as a National Priorities List (Superfund) site. Remediation of the Gowanus Canal can potentially disrupt activities at the property activities. In addition, if the subject property is identified as a potential responsible party for the Gowanus Canal contamination, the owner of the property may be fined or required to financially contribute to the remediation. Since the property adjoins the canal, shore upgrades (such as new a bulkhead) may be required by the USEPA as part of the remediation of the canal. Based upon these concerns, the NPL status of the Gowanus Creek is a REC.
- The property has an "e" designation for an air issue. "e" Designations for air issues typically stem from the presence of air emission sources in the vicinity of the property. The nature of this "e" designation should be further assessed, since an open "e" designation will impact any redevelopment plans for the property. Due to the presence of the "e" designation, future development of the property may require special design considerations such as special window and HVAC requirements.

As the property has been previously investigated and a known spill condition exists, PWGC recommends the following investigative activities:

- A geophysical survey should be conducted to located and assess if any USTs are present at the property. This investigation should focus on the historic gasoline tanks in the front of the building and the potential vents noted towards the rear of the building.
- The basement should be accessed so the fuel oil tank in the basement can be assessed.
- Soil / groundwater borings should be conducted in the vicinity of any tanks identified during the geophysical survey.
- Additional investigation to further determine the extent of petroleum impact.
- Subsurface / sub-slab samples should be collected to assess for potential soil gas issues and to properly design a vapor barrier for any future development of the property.

Though outside the scope of a typical Phase I, PWGC identified the following concerns which should the property be redeveloped, the following concerns must be considered.

- Lead based paint, asbestos and PCB light ballasts are likely present in the building. Such materials will require proper abatement before the existing building is demolished.
- Due to the presence of the spill and historic fill, soils excavated for footings / foundations will require proper disposal.
- Any tanks present of the property will require removal.
- The future property design should consider the property's location within a flood zone.
- A remedial plan has been prepared for the property which calls for soil excavation / stabilization to address the active spill.
- The future building plan will need to consider vapor intrusion and include a vapor barrier / sub-slab vapor abatement system or an open floorplan on the lower floor.

2.0 INTRODUCTION

2.1 Purpose

Phoenix Development (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 363 Bond Street, Brooklyn, NY. The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the subject property. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

2.2 Scope of Services

The assessment consisted of a visual inspection of the property and surrounding areas, interviews, a review of historical information and aerial photographs, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Southport, Connecticut provided the following: a computerized database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, historical aerial photograph search and a historical telephone directory search.

PWGC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the subject property or other properties in the site vicinity. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). PWGC's review of the database has been incorporated into this report along with a copy of the EDR report.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule) and PWGC's proposal for services.

2.3 Significant Assumptions

PWGC has made the following significant assumptions in the preparation of this report:

1. Groundwater Flow Direction – Based upon the most recent regional groundwater map, regional groundwater flow direction is to the east-southeast, towards the Gowanus Canal.
2. Regulatory Records Information - PWGC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate and current.
3. Other - PWGC assumes that all information provided through interviews is complete and unbiased.

2.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the property. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the property, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon property conditions in existence at the time of the investigation, and other information obtained and reviewed by PWGC.
4. PWGC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or regulations, or policies of federal, state, or local government agencies. PWGC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.
5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, property location, and project indicated. This report is not a definitive study of contamination at the property and should not be interpreted as such.
6. This report is based, in part, on information supplied to PWGC by third-party sources. While efforts have been made to substantiate this third-party information, PWGC cannot attest to the completeness or accuracy of information provided by others.

2.5 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between Phoenix Development and PWGC.

2.6 User Reliance

This report was prepared for the exclusive use of Phoenix Development and its affiliates and their partners, investors and lenders. PWGC assumes no liability for use of this report by any person or entity other than the client for which it was prepared.

2.7 Data Gaps

Any data gaps identified herein, as defined by ASTM Practice E 1527-05 § 3.2.20, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the subject

property and do not alter the conclusions of this report.

3.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

3.1 Location and Legal Description

The subject property is a parcel located at 363 Bond Street (Block 452, Lot 1). The property is located in the in the borough of Brooklyn in the county of Kings. **Figure 1** illustrates the property location on the United States Geological Survey (USGS) 7.5-minute series topographic map for the Brooklyn, New York quadrangle. Photos of the property are included in **Appendix A**.

3.2 Site Description and Improvements

The subject property measures approximately 0.68 acres in size and is improved with a two story 32,000 square foot, commercial building. The property is utilized as a distributor for children's clothing.

3.2.1 Municipal Services and Utilities

Utility services were provided to the property as follows:

- Heating/Cooling System – The building is heated primarily by natural gas. Historically the property utilized fuel oil.
- Water Supply –The property is connected to the NYCDEP water mains.
- Sanitary System –The property utilizes the NYCDEP municipal sewers.
- Electric – The property has electric service distributed by Con Edison.
- Emergency Electrical Power – Emergency power is not present.

3.3 Physical Setting

The topography of the property and surrounding area was reviewed from the USGS 7.5-minute series topographic map for the Brooklyn, New York quadrangle. The property has an elevation of less than 10 feet above the National Geodetic Vertical Datum (NGVD). In general, the property and surrounding slope area gently towards the Gowanus Canal. Regional physiographic conditions are summarized below.

3.3.1 Regional Geology / Hydrogeology

The geologic setting of Long Island is well documented and consists of crystalline bedrock composed of schist and gneiss overlain by layers of unconsolidated deposits. Immediately overlying the bedrock is the Raritan Formation, consisting of the Lloyd sand confined by the Raritan Clay Member. The Lloyd sand is an aquifer and consists of discontinuous layers of gravel, sand, sandy and silty clay, and solid clay. The Raritan Clay is a solid and silty clay with: few lenses of sand and gravel; abundant lignite and pyrite; and gray, red or white in color.

Above the Raritan Clay lies the Magothy Formation. The Magothy Aquifer consists of layers of fine to coarse sand and of moderate to high permeability, with inter-bedded lenses of silt and clay of low permeability resulting in areas of preferential horizontal flow. Therefore, this aquifer generally becomes more confined with depth. The Magothy Aquifer is overlain by the Upper Glacial Aquifer. The Upper Glacial Aquifer is the water table aquifer at this location and is comprised of medium to coarse sand and gravel with occasional thin lenses of fine sand and brown clay. This aquifer extends from the land surface to the top of the Magothy and, therefore, is hydraulically

connected to the Magothy Aquifer.

3.3.2 Local Hydrogeology

Based upon groundwater wells at the property, the depth to groundwater is approximately three feet below grade. Groundwater flow is estimated to be east-southeast, toward the Gowanus Canal. Based upon information contained within the EDR report, there are no public water supply wells located within a one-mile radius of the subject property.

3.3.3 Flood Potential

PWGC reviewed the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) to determine if the subject property is located within the 100-year or 500-year flood zones. The FIRM showing the property (3604970211-F) indicates that the entire property is located within Zone AE. Zone AE is identified as a high risk area and is a flood zone where base flood elevations are provided. The base flood elevation for the property is estimated at 10 feet. The presence of this property in the flood zone indicates that there is a potential risk of flooding at the subject property, therefore the need for flood insurance is required. FIRM data is incorporated in the EDR Radius Map Report included as **Appendix G**.

3.3.4 Direction and Distance to Nearest Surface Water

The nearest surface water body is the Gowanus Canal which is directly adjacent to the subject property.

4.0 PROPERTY USAGE

4.1 Current Property Usage

The property is currently occupied by a two story commercial building. The building is currently occupied by a distributor of children's clothing. No manufacturing occurs at the property.

4.2 Current Usage of Adjoining/Surrounding Properties

The surrounding area is predominantly commercial / residential. A summary of the surrounding properties is as follows:

Table 4-1 - Surrounding Property Usage

Direction	Property Description
North	400 Carol Street – residential / art studio. 347 Bond Street – City EMS station.
South	1 st Street with 365 Bond Street (commercial property) further south.
East	Gowanus Canal
West	Bond Street with multi-family residential buildings further west.

4.3 Historical Usage of Subject Property and Surrounding Properties

Historical sources researched to determine past usage of the subject property and surrounding properties are as follows:

Sanborn Fire Insurance Maps - Environmental Data Resources (EDR) was retained to provide historical Sanborn fire insurance maps of the subject and adjacent properties. Historical Sanborn maps for the subject property and surrounding area were reviewed for the years 1886, 1904, 1915, 1922, 1928, 1938, 1950, 1969, 1977, 1979, 1980, 1981, 1982, 1986, 1987, 1988, 1991, 1992, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006 and 2007. Copies of the historical Sanborn maps are included in **Appendix B**.

Historical Topographic Maps - Historical topographic maps for the subject property and surrounding area were reviewed for the years available between 1900, 1947, 1956, 1967, 1979 and 1995. The review of the maps is summarized in Table 4-2, however the topographic maps provided no additional data over the Sanborn maps which were available from the same time period. Copies of historical topographic maps are included as **Appendix C**.

Historical Aerial Photographs - PWGC performed a review of readily available aerial photographs showing the subject property and surrounding area. Photographs were reviewed for the years available between 1943, 1953

1966, 1975, 1984, 1994, 1995 and 2006. The review of the photos is summarized in Table 4-2 however the topographic maps provided no additional data over the Sanborn maps which were available from the same time period. A copy of the aerial photograph search is included in **Appendix D**.

City Directory Abstract - EDR was retained to provide a directory of historical telephone listings at the subject property and surrounding properties. The city directory dates back to 1928 and did not identify the subject property.

Table 4-2 - Subject Property Historical Usage

Date(s)	Source	Issues Noted	Description
1886-1904	SB	Yes	Several small structures are present on the central portion of the property. The property is identified as being a portion of an asphalt, cement, and building material yard.
1915-1928	SB	Yes	The front portion of the property is developed with a large building and the property use is identified as a paint manufacturer.
1938	SB	Yes	The property appears entirely developed with numerous buildings, similar to the current configuration. Gasoline tanks are present in the building on the Bond Street side of the property. The western portion of the building is identified as a garage and auto repair.
1950	SB	Yes	The property is identified as a radio parts manufacturer. Portions of the property are identified as plating and painting. Gasoline tanks no longer shown.
1969-2007	SB	Yes	Property identified as being a grocery. Central room is identified as plating in only the 1980 map. Likely a mistake from earlier maps as plating is inconsistent with the described property use at that time.
Sources: SB – Sanborn Map; TM – Historical Topographic Map; AP – Aerial Photograph; CD – City Directory			

Review of historical information for the subject property indicates that the property has been developed since at least 1886, and included environmental uses with environmental concerns up until at least 1950.

Table 4-2 – Surrounding Area Historical Usage

Date(s)	Source	Issues Noted	Description
1886-1915	SB	Yes	Gowanus Canal present east of the subject property. Remainder of block north of property is an asphalt/ concrete / construction material storage yard. Oil storage facility south of the property across First Street.
1922-1950	SB	Yes	Similar to previous, eastern portion of adjacent property to north now identified as Oil storage. Western portion identified as a garage from 1938 on.
1969	SB	Yes	Property to south across first street identified as electrical wire and cable manufacturer.
1977 -1988	SB	Yes	Property to north identified as oil service and vehicle salvage in addition to the large oil storage tanks which are still shown. Property to south is identified as a warehouse.
1991 - 2007	SB/AP	Yes	Property to north identified as Auto repair and storage. Tanks no longer depicted on Sanborn, however tanks still visible on aerial. Property to south identified as being warehouses.
Sources: SB – Sanborn Map; TM – Historical Topographic Map; AP – Aerial Photograph; CD – City Directory			

Review of historical information reviewed for the properties surrounding the subject property indicate that the area has been used primarily for commercial/industrial/manufacturing since at least 1886. These uses include bulk oil facilities and automotive uses.

5.0 USER PROVIDED INFORMATION

5.1 User Requirements

The user of a Phase I report, as per the EPA AAI Rule and ASTM E1527-05 has certain responsibilities which include providing the following information, if available, to PWGC to be included within the Phase I Report. Additionally, PWGC provided the user of the report a User Questionnaire form. The completed form was not returned to PWGC. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identify if recognized environmental conditions are present at the subject property. A sample User Questionnaire and any provided documents are included in **Appendix F**.

5.2 Title Records

Title records for the property may contain information about past owners and uses of the subject property. The title report may also contain property information such as restrictive declarations which are limitations on property uses based upon known environmental conditions. As of the date of this report the user has not provided PWGC with a property search nor has indicated to PWGC that one should be performed.

5.3 Environmental Liens

An environmental lien is a charge, security or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws.

The user has not made PWGC aware of any environmental liens against the subject property. PWGC gave the user the option of having PWGC perform an environmental lien search, but PWGC was not instructed to perform such search.

5.4 Specialized Knowledge

No specialized knowledge about the property was provided to PWGC.

5.5 Commonly Known or Reasonably Ascertainable Information

There is no commonly known information about the subject property.

5.6 Valuation Reduction for Environmental Issues

To the best of PWGC's knowledge, there have been no adjustments to the subject parcels value due to environmental issues.

5.7 Owner, Property Manager and Occupant Information

The property is currently owned by 363 Bond Street Corp and is currently occupied by a children clothing distributor.

5.8 Reason for Performing Phase I ESA

The Phase I ESA was performed at the request of the Phoenix Development as part of its due diligence relating to

a potential purchase of the subject property.

6.0 RECORDS REVIEW

6.1 Standard Environmental Record Sources

Environmental Data Resources (EDR) of Southport, Connecticut was retained to provide a computerized database search of the project area within an ASTM-standard radius of the subject property. A list of the databases searched and the search radius is shown on the summary table below. PWGC reviewed the database output to determine if the property appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix G**). A summary of standard environmental record sources researched is as follows:

6.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Table 6-1 - Federal Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance
USEPA	National Priority List	NPL	1.0 mile
USEPA	National Priority List Deletions	Delisted NPL	0.5 mile
USEPA	Comprehensive Environmental Response Compensation and Liability Act Registry	CERCLIS	0.5 mile
USEPA	CERCLIS No Further Remedial Action Planned	CERCLIS-NFRAP	0.5 mile
USEPA	Resource Conservation and Recovery Act Corrective Action Activity	CORRACTS	1.0 mile
USEPA	Resource Conservation and Recovery Act Treatment/Storage/Disposal Facilities	RCRA TSD	0.5 mile
USEPA	Resource Conservation and Recovery Act Small/Large Quantity Hazardous Waste Generators	RCRA SQG/LQG	Subject Property and Adjoining
USEPA	Federal Institutional/Engineering Control registries	US INST/ENG Controls	Subject Property
USEPA	Emergency Response Notification System	ERNS	Subject Property
USEPA	Superfund (CERCLA) Consent Decrees	CONSENT	1.0 mile
USEPA	Records of Decision	ROD	1.0 mile
USEPA	Mines Master Index	MINES	0.25 mile

National Priority List - The National Priority List (NPL) is the Environmental Protection Agency (EPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the federal Superfund Program.

The subject property was not identified as a NPL site.

One NPL site, Gowanus Canal, was identified within the search radius. The Gowanus Canal is located adjacent to the subject property. The Gowanus Canal has been severely impacted by the 100 plus years of commercial and industrial operations which have occurred adjacent to the canal. The canal contains upwards of 350 ppm of PCBs and coal tar residue up to 23% by weight. Numerous investigations have been conducted in the vicinity of the Gowanus Canal in order to identify potential responsible parties. The subject property has not been identified as a potential contributor, however due to the industrial history of the property, the potential for the property to be identified as a potential source cannot be ruled out. The adjacent property to the north, 400 Carroll Street has been identified as a potential contributor.

National Priority List Deletions - National Priority List Deletions are sites that have been removed from the National Priorities List. Sites are deleted where the EPA has determined that no further response is appropriate.

Neither the subject property nor any sites within the search radius were identified as a delisted NPL site.

CERCLIS - The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances.

Neither the subject property nor any sites within the search radius were identified as a CERCLIS site.

CERCLIS-NFRAP - No Further Remedial Action Planned (NFRAP) sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL).

The subject property is not identified as a CERCLIS-NFRAP site. Three sites (Vidan Auto Salvage, Brooklyn Union Gas – Citizens Gate Station and Brooklyn Union Gas – Metropolitan Works) within the search radius were identified as CERCLIS-NFRAP sites. One of the identified CERCLIS-NFRAP sites, Vidan Auto Salvage, is located hydraulically cross-gradient of the subject property (0.099 miles to the north-northeast) with respect to groundwater flow, and is unlikely to have impacted the subject property. The other two CERCLIS-NFRAP sites are located on the opposite side of the Gowanus Canal. The canal is likely acting as a hydraulic barrier and therefore, it is unlikely these sites have impacted the subject property.

RCRA CORRACTS - The RCRA Corrective Actions (CORRACTS) database is the EPA's list of hazardous waste treatment, storage or disposal facilities subject to corrective action under RCRA.

The subject property was not identified as a RCRA CORRACTS site. Two sites within the search radius were identified as RCRA CORRACTS sites. One of the identified RCRA CORRACTS sites (Debevoise Co) is located on the opposite side of the Gowanus Canal and is therefore unlikely to have impacted the subject property. The other

RCRA-CORRACTS site (Patterson Chemical Company), a general warehousing and storage facility, is located less than 1/8-mile west-southwest of the subject property in the hydraulically up-gradient direction. This site was given a low corrective action priority. Due to its proximity to the subject property and the location in the hydraulically up-gradient direction, the potential exists for this RCRA-CORRACTS site to have impacted the subject property.

RCRA Treatment, Storage and Disposal - The EPA Resource Conservation and Recovery Act (RCRA) program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Treatment, Storage and Disposal (TSD) database is a compilation of reporting facilities that treat, store or dispose of hazardous waste.

Neither the subject property nor any sites within the search radius were identified as a RCRA TSD site.

RCRA Generators - The RCRA Generators database is a compilation of reporting facilities that generate hazardous waste. A Small Quantity Generator (SQG) is a site which generate more than 100 and less than 1000 kg of hazardous waste during any one calendar month and accumulates less than 6000 kg of hazardous waste at any time; or a site which generates less than 100 kg of hazardous waste during any one calendar month and accumulates less than 1000 kg of hazardous waste at any time. Large Quantity Generators (LQG) generate more than 1000 kg of hazardous waste per month. A Conditionally Exempt SQG (CESQG) generates less than 100 kg of waste a month. A RCRA non generator (RCRA Non-Gen) no longer produces hazardous waste.

The subject property is not identified as a RCRA site.

Five RCRA SQG, four RCRA CESQG, and 31 RCRA Non-Gen sites were identified within the search radius. Two of the RCRA non-generator sites, Two Dans Enterprises and Vidan Auto Salvage, are located on neighboring properties. A review of these properties indicated that there are no outstanding violations. Based upon the lack of violations for these sites, it is unlikely they have impacted the subject property.

Several of the other RCRA sites are located in the hydraulically up-gradient direction to the subject property. The presence of chemical uses at a site does not necessarily indicate that spills have occurred. Sites with spills will be discussed in the appropriate section.

Federal Institutional/Engineering Controls - Federal Institutional/Engineering Controls databases list sites with institutional/engineering controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

The subject property is not identified in the Federal Institutional/Engineering Controls databases.

Emergency Response Notification System - The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil or hazardous substances.

The subject property is not identified in the ERNS databases.

Superfund Consent Decrees - The Superfund Consent Decrees (CONSENT) list identifies major legal settlements that establish responsibility and standards for cleanup at NPL sites.

Neither the subject property nor any sites within the search radius were identified as a CONSENT site.

Records of Decision - Record of Decision (ROD) documents mandate a permanent remedy at an NPL site containing technical and health information to aid in the cleanup.

Neither the subject property nor any sites within the search radius were identified as a ROD site.

Master Mines Index - The Master Mines Index (MINES) file contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Neither the subject property nor any sites within the search radius were identified in the MINES database.

6.1.2 New York State Databases

The table below summarizes the State databases that were searched.

Table 6-2 - New York State Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance
NYSDEC	Inactive Hazardous Waste Disposal Sites in New York State	SHWS	1.0 mile
NYSDEC	Hazardous Substance Waste Disposal Site Study	HSWDS	0.5 mile
NYSDEC	Solid Waste Facility Register	SWF	0.5 mile
NYSDEC	Registered Recycling Facilities	SWRCY	0.5 mile
NYSDEC	Registered Waste Tire Storage Facilities	SWTIRE	0.5 mile
NYSDEC	Leaking Underground Storage Tank Sites	LTANKS	0.5 mile
NYSDEC	Petroleum Bulk Storage (PBS)	UST/AST	Subject Property and Adjoining
NYSDEC	Chemical Bulk Storage (CBS)	CBS AST/UST	Subject Property and Adjoining
NYSDEC	Institutional/Engineering Control registries	INST/ENG Controls	Subject Property

Agency	Listing Name or database Searched	Abbreviation	Search Distance
NYSDEC	Voluntary Cleanup Agreements	VCP	0.5 mile
NYSDEC	Brownfield sites	Brownfields	0.5 mile
NYSDEC	Major Oil Storage Facilities	MOSF	0.5 mile
NYSDEC	New York State Spills	NYSPIILLS	0.125 mile
NYSDEC	Dry Cleaner Site	Drycleaners	0.25 mile

New York State Inactive Hazardous Waste Disposal Sites - The New York State Department of Environmental Conservation (NYSDEC) maintains a state priority list of Inactive Hazardous Waste Disposal Sites (SHWS) considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites.

The subject property is not identified in the SHWS database.

Two properties within the search radius were identified in the SHWS database. Each of these SHWS are located south of the subject property in close proximity to the Gowanus Canal at a distance greater than ¼ mile. Due to their proximity to the Gowanus Canal, these sites have a local groundwater flow direction towards the canal and are therefore unlikely to have impacted the subject property.

Hazardous Substance Waste Disposal Site Study - The Hazardous Substance Waste Disposal Site Study (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the SHWS registry and non-registry sites that EPA Preliminary Assessment reports or Site Investigation reports were prepared.

The subject property is not identified as a HSWDS site.

One property, BUG Metropolitan Works, is identified within the search radius as a HSWDS site. This property is located south of the subject property in close proximity to and across the Gowanus Canal. Due to the location of this property across the canal, it is unlikely to affect the subject property.

Solid Waste Facility Register - The NYSDEC Solid Waste Facility Register (SWF) records contain an inventory of solid waste disposal facilities or landfills in New York State.

The subject property is not listed as a SWF site.

Eleven SWF sites are located within the search radius. One SWF site, Carroll Street Transfer Station is located on a neighboring property in the hydraulically down-gradient direction. This site is listed as an inactive transfer station.

No other information regarding the activities at this property are available in the EDR database search. Based upon the location of this site compare to the subject site, the neighborings sites SWF status may have represented a historic REC. Based upon their distance from the subject site, the 10 remaining sites are unlikely to impact the subject the property.

Registered Recycling Facilities - The Registered Recycling Facilities List (SWRCY) is a NYSDEC list of recycling facilities.

The subject property is not listed as a SWRCY site.

Two SWRCY sites are located within the search radius. Each site is located on the opposite side of the canal and are therefore unlikely to impact the subject property.

Registered Waste Tire Storage Facilities - The Registered Recycling Facilities List (SWTIRE) is a NYSDEC list of Registered Waste Tire Storage & Facility List.

Neither the subject property nor any sites within the search radius were identified in the SWTIRE database.

Leaking Underground Storage Tank Sites - The Leaking Underground Storage Tank Sites (LTANKS) database contains a NYSDEC inventory of reported leaking storage tank incidents. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

The subject property was not identified as an LTANK site. Forty-six LTANK sites were identified within the search radius. None of the LTANK sites are located on adjoining parcels. Forty-one of the forty-six identified sites have been issued a no further action letter by the NYSDEC. Based upon their closed status, they are unlikely to pose a concern to the subject property.

None of the five open LTANK site are located in the hydraulically up-gradient direction. Based upon their location from the subject property with respect to groundwater flow, they are unlikely to have impacted the subject property.

Petroleum Bulk Storage - The NYSDEC Petroleum Bulk Storage - Underground Tanks (UST) database lists facilities with a petroleum storage capacity of more than 1,100 gallons and less than 400,000 gallons. The NYSDEC Petroleum Bulk Storage - Aboveground Tanks (AST) database lists facilities with registered above ground storage tanks.

The subject property is not identified as a UST/AST site.

Thirty-seven sites within the search radius are identified in the UST/AST databases. None of these sites are located on neighboring properties. The presence of tanks alone does not represent an environmental concern. Sites with spills will be addressed in the appropriate section.

Chemical Bulk Storage - The Chemical Bulk Storage (CBS) database is a NYSDEC list of facilities that store regulated hazardous substances in aboveground tanks (AST) with capacities of 185 gallons or greater or underground tanks (UST) of any size.

The subject property has not been identified as a CBS site. One CBS site, Wesley Lacquer Corp, is identified between 1/8 and 1/4 of a mile of the site in the hydraulically cross-gradient direct. Based upon the location of the site in a cross-gradient direction, it is unlikely that this CBS site has impacted the subject property.

Institutional/Engineering Controls – NYSDEC list of Environmental Remediation sites with Institutional or Engineering Controls in place.

Neither the subject property nor any sites within the search radius were identified in the IC/EC database.

Voluntary Cleanup Agreements - The NYSDEC Voluntary Cleanup Program (VCP) database identifies brownfield sites undergoing private sector cleanup as part of redevelopment.

The subject property is not identified in the VCP database. One property within the search radius was identified in the VCP database. The identified VCP site is located across the Gowanus Canal. Therefore it is unlikely to have impacted the subject property.

Brownfields - A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant.

The subject property is not identified in the Brownfields database. One property within the search radius was identified in the Brownfields database. The identified Brownfields site is located across the Gowanus Canal. Therefore it is unlikely to have impacted the subject property.

Major Oil Storage Facilities - The NYSDEC Major Oil Storage Facilities (MOSF) database lists facilities or vessels with a petroleum storage capacity of more than 400,000 gallons.

The subject property is not identified as a MOSF site. Two MOSF sites, Bayside Fuel Oil Depot Corp and Bayside Fuel (Former Cibro Terminals) were identified in the EDR report. Each of these sites is located in the cross-gradient direction from the subject site and are therefore unlikely to affect the subject property.

New York State Spills - The New York State Spills Information Database (NYSPIILLS) contains data collected on

chemical and petroleum spill incidents reported to NYSDEC since April 1, 1986.

The subject property was identified as a NYSPILL site (NYSDEC Spill# 05-01697). On May 11, 2005, during an environmental investigation of the property, impacted soil and groundwater were identified. The impact was identified as weathered petroleum, however, the type of petroleum was unknown. No remedial activities have been performed on the property to date. Additional investigation may be required to determine the full extent of petroleum impact.

Thirty-one properties within the search radius were identified in the NYSPILLS database. Two of the thirty-one sites remain open. One of the sites is on the neighboring property to the north. This site, known as Toll Brooklyn at 400 Carroll Street is listed due to a failure of a 6,000 gallon fuel oil UST. This site also has two closed spills (97-05145 and 96-05780) associated with the property. Spill number 96-05780 was closed on February 28, 2003 and Spill number 97-05145 was closed on July, 29, 1997, the same day it was opened. Due to the proximity of this site to the subject property, the potential exists to have impacted the subject property.

The remaining open spill is located on the opposite side of the Gowanus Canal and therefore is unlikely to pose a concern to the subject property.

Based upon the closed status of the remaining NYSPILL sites, they are also unlikely to pose a concern to the subject property.

Historical Drycleaners – The NYSDEC maintains registry of Registered Drycleaner (RDC) sites that were available to EDR researchers.

The subject property is not identified as a RDC site.

Four RDC sites were identified within the search radius of the report. Each of these sites are located in the cross-gradient direction with regards to groundwater flow. Neither of these sites are on neighboring properties. Based upon this information, it is unlikely they have affected the subject property.

6.1.3 EDR Databases

The table below summarizes the EDR databases that were searched.

Table 6-3 - Additional Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance
EDR	Manufactured Gas Plants	CGS	1.0 mile

Manufactured Gas Plants - The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas plants (MGP) were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar, sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

The subject property has not been identified as a MGP site, however, five MGP sites were identified. Each of the MGP sites are located on the opposite side of the Gowanus Canal and therefore are unlikely to pose a threat to the subject property.

6.1.4 Orphan Sites

Orphan sites are properties, that due to an inadequate or incomplete address in government databases or in base map files, are not able to be geographically located (i.e. mapped or geocoded). This can occur for several reasons; no street number or street name in address given; the street address is given only as a P.O. Box; or when inconsistencies exist in the address (street number does not exist in the city / zip code given).

Nine hundred forty-four orphan sites were identified in the EDR report. PWGC performed a cursory review of the addresses listed. Neither the subject property, nor any adjoining parcels appear to be identified in the orphan listings.

6.2 Additional Environmental Record Sources

6.2.1 Freedom of Information Act Requests

Freedom of Information Act (FOIA) requests were sent to the United States Environmental Protection Agency, Region II (USEPA), the New York State Department of Environmental Conservation, Region I (NYSDEC), New York City Department of Environmental Protection (NYCDEP), New York City Office of Environmental Restoration (OER), and the United States Environmental Protection Agency (USEPA). Copies of FOIA requests are included in **Appendix H**.

As of the date of this report, no responses to FOIA requests have been received.

PWGC also performed a review of available online databases. These include the NYC Department of Buildings, and the NYC SPEED Database.

Information obtained from these sources includes:

- The current building was constructed in 1931;
- The property has an 'e' designation for Air.

Sites with 'e' designations may require investigation prior to construction, environmental remediation during construction, and mitigation measures to be integrated into the building design.

SITE RECONNAISSANCE

6.3 Methodology and Limiting Conditions

Mr. Bryan Devaux and Zeb Youngman of PWGC performed the site inspection on Monday December 19, 2011. Weather conditions during the inspection were overcast with a temperature of approximately 55° Fahrenheit.

The site inspection consisted of an inspection of the exterior and interior portions of the property. .

6.4 Aboveground Storage Tanks (AST)

The property is reported to have a fuel oil AST in the small basement area under the north-western portion of the building. The basement was inaccessible at the time of the inspection.

6.5 Underground Storage Tanks (UST)

The historic Sanborn maps depicted gasoline tanks beneath the western portion of the building. The tanks current status is unknown. A vent pipe was observed on the roof which is likely attributable to a historic gasoline tank(s). Potential vent pipes were also observed on the north side of the eastern portion of the building.

6.6 Hazardous and Non-Hazardous Chemical Storage

PWGC did observe small quantities of various cleaning chemicals around the property.

6.7 Waste Generation, Storage, and Disposal

WASTE GENERATION, STORAGE, AND DISPOSAL			
Classification	Type of Waste / Generation Process	Type of Storage / Location	Disposal Method / Contractor
Non-Regulated Solid Waste	Municipal Solid Waste / Routine Site Operations	In 5 yard dumpster.	Private waste hauler
Non-Regulated Liquid Waste	Sanitary Sewage / Routine Site Operations	Discharged to NYCDEP sewers.	N/A
Regulated Solid / Liquid Waste	None Identified	N/A	N/A
Biomedical Waste	None Identified	N/A	N/A

6.8 Polychlorinated Biphenyls (PCBs)

At the time of the inspection, PWGC did not observe any PCB containing equipment such as transformers or hydraulic equipment. Fluorescent light ballasts present at the property may contain PCB and would require disposal as universal waste, if present.

6.9 Additional Site Conditions

The following is a summary of visual and/or physical observations made by PWGC at the subject property on the day of the inspection. Photographs of pertinent observations are included in **Appendix A**.

Table 7-1 - Additional Site Conditions

Condition	Identified
Interior drains, trenches or sumps.	Yes
Interior stains or corrosion	No
Unusual odors	No
Interior pools of liquid	No
Stained Soils or Pavement	No
Stressed Vegetation	No
Indications of solid waste disposal	No
Exterior ponds, pits, or lagoons	No
Wastewater or storm water discharge / disposal	No
Oil water separators / clarifiers	No
Septic Systems / Cesspools	No
Wells (Drinking water, monitoring wells, agricultural / irrigation wells, or process water wells)	Yes
Petroleum or natural gas pipelines or easements	No
Other	No

Drains were present in the loading dock. The drains appeared to discharge to a sump pit. A pump within the pit appears to discharge to the sewer system.

Five monitoring wells were observed on the property. PWGC gauged the wells and two of the wells contained free floating oil.

7.0 INTERVIEWS

7.1 Owner

During the property inspection, site personnel were available for questioning. Any questions answered by site personnel were included in the relevant section of the report. PWGC also provided an Owner Questionnaire to assist with the completion of this Phase I ESA. To date, a copy of the completed form has not been returned. A copy of the questionnaire form is included in **Appendix F**.

7.2 Occupants

The owner and operator is the same entity at this property. A copy of the operator questionnaire form was provided to the operator. To date, a copy of the completed form has not been returned. A copy of the questionnaire form is included in **Appendix F**.

7.2.1 Historic Environmental Report Review

PWGC was provided the following documents to assist in preparing this report:

- May 2005 ELM Phase II Investigation Report – This Phase II was performed based upon the 100 year industrial history of the property. Investigation included 10 soil borings and the installation of 5 monitoring wells. Site investigation identified the presence of historic fill material at the site to a depth of 10-17 feet below grade. The fill material is underlain by a clay layer. Evidence of petroleum staining was present in all 10 borings. Free product was encountered in 2 of the 5 monitoring wells. Soil samples revealed elevated concentrations of VOCs, SVOCs, metals, and pesticides. These site conditions were report to the NYSDEC and Spill 05-01697 was assigned to the property.
- February 2009 ELM Remedial Action Plan – The remedial plan was based upon the data collected during the 2005 Phase II. The report identified two “hotspot areas”(SB-1 and MW-5) based upon the presence of free product at those locations.

The Remedial Action Plan called for the following remedial activities:

- Soil excavation and disposal in “hotspot areas”
- In situ soil stabilization or chemical treatment in areas where VOC and SVOC impacts are present and not attributable to urban fill. A area west of the hotspot identified above met this criteria
- Installation of a vapor barrier and passive sub-slab depressurization system.
- Capping of any portion of the property not covered by buildings, concrete or asphalt.

Copies of the above reports / figures are included in **Appendix F**.

7.3 Local Government Officials

Freedom of Information Act (FOIA) requests were sent to the United States Environmental Protection Agency, Region II (USEPA), the New York State Department of Environmental Conservation, Region II (NYSDEC), the New York City Office of Environmental Restoration (NYCOER), and the New York City Department of Environmental Protection (NYCDEP). FOIA requests and responses are addressed in Section 5.2. Based upon the site history, interviews with government officials to obtain additional information are not warranted at this time.

8.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM 1527-05

Though outside the scope of ASTM E1527-05 and PWGC's contracted scope, PWGC did perform a cursory scope of the following issues which could pose a concern at the property.

8.1 Wetland Delineation

A review of the EDR database search, which includes State and Federal wetlands, identified wetlands associated with the Gowanus Canal. . The nearest wetlands are located due east of the property on the eastern bank of the Gowanus Canal.

8.2 Radon Risk Evaluation

Radon is a colorless, radioactive; inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's "Map of Radon Zones for New York State", September 1993 indicates that Kings County is not a radon risk area. The EDR report provides information from the New York State Department of Health radon survey which indicates that 100% of those sites tested in Kings County were below the United States Environmental Protection Agency (USEPA) radon action level of 4 Pico curies per liter (pCi/L) in the living area.

8.3 Asbestos

PWGC observed vinyl floor tiles which could potentially contain asbestos, in various portions of the building. The tiles appeared in good condition. Based upon the age of the building, asbestos containing materials are likely present.

8.4 Lead-Based Paint (LBP)

PWGC observed evidence of peeling paint within the building. Due to the age of the structure, it is likely that lead-based paint is present.

8.5 Mold

PWGC did not observe any evidence of mold growth within the building.

9.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, the following potential recognized environmental conditions have been identified:

- The property has an extensive industrial history.
- Gasoline tanks were historically present at the property. Potential vent pipes to additional tanks were noted.
- A fuel oil AST is present in the basement of the building.
- The property has an active spill and free phase petroleum is present at the water table.
- Historic fill is present beneath the property.
- The subject property is located adjacent to the Gowanus Creek, which is identified as a National Priorities List (Superfund) site.
- The property has an "e" designation for an air issue.

Potential recognized environmental conditions identified at the subject property were evaluated to determine whether items initially suspected to be recognized environmental conditions are in fact recognized environmental conditions. Evaluation of potential recognized environmental conditions (REC) are as follows:

Onsite

- The property has an extensive industrial history. Industrial uses have the potential to impact the sites soils and groundwater by means of improper handling of industrial chemicals and wastes. Historic industrial uses are typical more of a concern due to historically lax concerns for the environment and waste disposal. Based upon properties past use, which included automotive uses and a garage, this concern is a REC.
- Gasoline tanks were historically present at the property. Potential vent pipes to additional tanks were noted. Underground storage tanks (USTs) have the potential to impact the subsurface soils and groundwater as a result of leaks, spills or equipment failure, therefore the tanks represent a REC.
- A fuel oil AST is present in the basement of the building. Spills from ASTs can impact the subsurface soils and groundwater from the ground surface or through holes / voids in an impermeable surface (such as a concrete floor). Since the condition of the tank and surrounding area could not be assessed, the fuel AST represents a REC at this time.
- The property has an active spill / free phase petroleum is present at the water table. The presence of free phase petroleum is an obvious indicator that soil and groundwater impacts have occurred at the property. Environmental remediation will be required to remove the product and close the active spill issue with the NYSDEC. Given the active nature of this spill, it represent a REC. In addition, the presence of site impacts can potential pose a sub-slab vapor / indoor air concern.
- Historic fill is present beneath the property. Historic fill typically contains elevated levels of petroleum products and metals. Historic fill material typically doesn't require remediation, however fill material

which is removed during any site work is not suitable for re-use and will require proper disposal, and therefore this concern is a REC.

- The property has an "e" designation for an air issue. "e" Designations for air issues typically stem from the presence of air emission sources in the vicinity of the property. The nature of this "e" designation should be further assessed, since an open "e" designation will impact any redevelopment plans for the property. Due to the presence of the "e" designation, future development of the property may require special design considerations such as special window and HVAC requirements.

Offsite

- The subject property is located adjacent to the Gowanus Creek, which is identified as a National Priorities List (Superfund) site. Remediation of the Gowanus Canal can potentially disrupt activities at the property activities. In addition, if the subject property is identified as a potential responsible party for the Gowanus Canal contamination, the owner of the property may be fined or required to financially contribute to the remediation. Since the property adjoins the canal, shore upgrades (such as new a bulkhead) may be required by the USEPA as part of the remediation of the canal. Based upon these concerns, the NPL status of the Gowanus Creek is a REC.
- The property has an "e" designation for an air issue. "e" Designations for air issues typically stem from the presence of air emission sources in the vicinity of the property. The nature of this "e" designation should be further assessed, since an open "e" designation will impact any redevelopment plans for the property. Due to the presence of the "e" designation, future development of the property may require special design considerations such as special window and HVAC requirements.

PWGC identified the following conditions outside of ASTM 1527-05 were identified in connection with the subject property:

- Due to the age of the building, asbestos and lead based paint containing materials may still be present in the remaining building materials (such as siding and roofing materials). Special care should be taken to assess the potential for these materials during any construction or demolition activities which may disturb the building.
- PCB light ballasts may be present. Such material will require proper disposal if present.
- The subject property is located within a flood zone. The property may require special insurance due to its location within a flood zone. The property's location within a flood zone should be considered during any future site development.

10.0 CONCLUSIONS AND RECOMMENDATIONS

Based upon evaluation of recognized environmental conditions (see Section 12), PWGC recommends that a Phase II ESA be performed at the property.

As the property has been previously investigated and a known spill condition exists, PWGC recommends the following investigative activities:

- A geophysical survey should be conducted to located and assess if any USTs are present at the property. This investigation should focus on the historic gasoline tanks in the front of the building and the potential vents noted towards the rear of the building.
- The basement should be accessed so the fuel oil tank in the basement can be assessed.
- Soil / groundwater borings should be conducted in the vicinity of any tanks identified during the geophysical survey.
- Additional investigation to further determine the extent of petroleum impact.
- Subsurface / sub-slab samples should be collected to assess for potential soil gas issues and to properly design a vapor barrier for any future development of the property.

Should the property be redeveloped, the following property concerns must be considered.

- Lead based paint, asbestos and PCB light ballasts are likely present in the building. Such materials will require proper abatement before the existing building is demolished.
- Due to the presence of the spill and historic fill, soils excavated for footings / foundations will require proper disposal.
- Any tanks present of the property will require removal.
- The future property design should consider the property's location within a flood zone.
- A remedial plan has been prepared for the property which calls for soil excavation / stabilization to address the active spill.
- The future building plan will need to consider vapor intrusion and include a vapor barrier / sub-slab vapor abatement system or an open floorplan on the lower floor.

11.0 DEVIATIONS

This Phase I ESA was conducted in accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) and 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding additional services outlined in Section 11.0, there were no deviations or deletions from this practice.

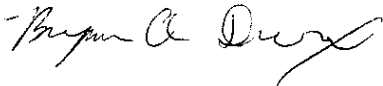

12.0 REFERENCES

Standard practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Standard E 1527-05

All Appropriate Inquiry, Final Rule, 40 CFR Part 312.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Bryan A Devaux
Senior Project Manager

Report Completion Date: December 22, 2011

RESUMEE OF ENVIRONMENTAL PROFESSIONAL

Bryan A. Devaux, Senior Project Manager

Professional Experience

PWGC: 11 years

Prior: 4 years

Education

BS, Environmental Geology (Minor: Biology), SUNY Stony Brook, NY

Areas of Expertise

- Phase I & II Management, QA/QC
- Soil/Groundwater Investigations
- Remedial Design & Systems (Scheduling, Administration, Investigation, Compliance, Reporting)
- Bioremediation (including Hydrology & Geochemistry)

Professional Certification/Training

- ASTM Phase I ESA Practices for Commercial Real Estate: Transaction Screen & Phase I Site Assessment
- DOT Hazardous Materials Training
- OSHA Health & Safety 40-hr Training
- BNL Radiological Worker I & III
- Confined Space Entry (29CFR1910.146)
- Emergency Medical Technician (EMT)
- Mold Remediation Manager (Future Environmental Designs Training Center)

Professional Affiliation

- Long Island Geologists Association
- National Groundwater Association

PROFILE

Mr. Devaux has extensive experience in managing groundwater monitoring and remedial system projects. He coordinates field activities, subcontractors, and personnel to satisfy clients' overall and regulatory agencies' project objectives. His multi-media sampling programs of PWGC clients' project sites have served in a number of soil and groundwater investigations. Mr. Devaux prepares field reports, laboratory analysis summaries, and provides recommendations to integrate his findings into client's environmental strategies and business goals. He has solid conceptual and invaluable hands-on experience in:

- Conducting Phase I / Phase II Assessments
- Project Administration & Oversight (Sampling/Boring, Logs, Chain of Custody, Multimedia Documentation, Reporting)
- Subcontractor Administration & Field Sample Collection and Data Evaluation QA/QC Management
- Outsourced Geophysical Task Management
- Sampling Protocols/QA Levels (USEPA – Contract Laboratory Protocol, NYSDEC – Analytical Services Protocol Category B)
- Soil/Ground Water Sampling (Geoprobe®, Hollow Stem Auger, Mud Rotary Techniques)
- Sediment/Surface Water Sampling (Manual, Geoprobe® Techniques, Sampling Pumps, Applied Methods)
- Field Screening Instruments (PID, OVA, OVM, Four-Gas Meters, Particulate Monitoring)

SELECTED PROJECTS

Baumann Bus, Gabreski Airport - Westhampton, NY

UIC Investigation/Remediation

Mr. Devaux completed the investigation/remediation for Grabreski Airport which consists of approximately 58 acres owned by Suffolk County. The property was previously owned by the United States Air Force when the airport operated as a military air base. Following a 2004 site investigation, an onsite manhole was identified as containing elevated levels of semi-volatile organic compounds (SVOCs). A remedial workplan prepared for the site recommended the closure of unused sanitary structures. Mr. Devaux was able to rapidly identify and inventory site structures through combination of file review and site inspections. He worked in conjunction with SCHDS to prepare evaluation criteria to assess which structures would require sampling. The revised sampling criteria allowed PWGC to target sampling to structures of concern and to control costs. Mr. Devaux prepared an inventory sheet of the UIC structures present for the site, which did not previously exist. He thoroughly addressed site UIC issues so that structures which will not be required following site redevelopment may be properly closed without further need for assessment/ remediation.

Phipps Houses Group - New York, NY

Phase II East 100th Street and East 102nd Street - As part of the proposed renovation of these properties, Mr. Devaux has reviewed historic Environmental reports to determine if any environmental concerns are present. From the review, it was determined that historic fill is present and that there is evidence of the site having been impacted from an off-site source. Based on these findings, PWGC prepared an investigation work plan to assess the soil, groundwater and sub-slab vapor at the site.

Arverne Development, LLC, Arverne Urban Renewal Area Rockaway, NY

Arverne East Phase I Investigation - As part of a proposed redevelopment project, Mr. Devaux was retained to conduct a Phase I investigation over an approximately 110 acre parcel identified as the "Arverne East" and Central Park / Dune Preserve" portion of the Arverne Urban Renewal Area. Currently the property is largely vacant and owned by the city of New York. Our client hired PWGC to assess the property for environmental concerns as part of the redevelopment process. All development plans must undergo New York City Department of Environmental Protection (NYCDEP) review, to ensure that future occupants will not be affected by environmental concerns. Future uses for the property are to include single and multi family residential homes, commercial shopping areas, and park, recreation and habitat protection areas.

Based on the Phase I findings, Mr. Devaux recommended Geophysical surveys of former tank areas, Freedom of information act (FOIA) file reviews of NYS Department of Environmental Conservation (NYSDEC) spill files at offsite locations which may impact the subject site, and subsurface soil and groundwater investigation at locations where potential impacts may have occurred. PWGC anticipates the client's approval to proceed with the Phase II portion of the project.

Rechler Equity Partners - Melville, NY

Phase I & Phase II, Former NWIRP, Calverton NY - For the proposed development of an industrial park, Mr. Devaux was retained to conduct a Phase I investigation of an approximately 300 acre parcel located within the former Naval Weapon Industrial Reserve Plant (NWIRP). The historically vacant parcel is surrounded by property with a significant environmental history. Mr. Devaux conducted an

Bryan A. Devaux, Senior Project Manager

extensive review of US Navy-provided public documents to determine potential offsite impacts on the subject parcel.

Based on his findings, Mr. Devaux recommended the assessment of two potential monitoring wells observed at the property and sampling of a stormwater outfall. To address the client's key concerns, he oversaw upgradient groundwater sampling to assess the groundwater quality at the site. The subsequent Phase II investigation results did not call for recommendations with regards to environmental issues.

Commercial Retail Redevelopment ESA - Mount Sinai, NY Mr. Devaux conducted the 31-Acre property survey in accordance with ASTM E1527-00 standard and additional requirements unique to the project, such as coordinated investigations of endangered species habitats, wetlands, and historic buildings. He utilized Global Positioning Satellite (GPS) coordinates to provide the client with a highly accurate survey for a property this size.

Property Transfer Phase I ESA, Best Building & Supply Lumber - Speonik, NY - Mr. Devaux completed the Phase I ESA for a 5-Acre parcel, which presented unique challenges, as it was adjacent to and on the same lot as a NYS Inactive Hazardous Waste Site. Coordinating with the NYSDEC, he conducted a thorough file search on the property and determined that impacted stormwater from the former lumber treatment area has impacted the parcel in question. He recommended an appropriate sampling program to quantify the impact, and to consult an environmental attorney for the potential purchase, since the subject site might be included as part of the NYS Inactive Hazardous Waste site listing.

Commercial/Residential Phase II Investigations - Tristate-Area

PWGC Property Transaction Services - Mr. Devaux formulates the scope of work, and oversees Phase I & II Environmental Investigations. He addresses PWGC clients concerns typically raised in a Phase I Environmental Site Assessment. He manages the investigations, which involves coordinating PWGC staff and subcontractors. Subsequent, he evaluates data and makes recommendations for appropriate further action.

Benjamin Beechwood, Arverne Urban Renewal Area (URA) - Far Rockaway, NY

Phase II Site Assessment Oversight - Mr. Devaux coordinated the assessment at a 42-city blocks large portion of the major redevelopment area. He coordinated 15 geophysical surveys and discovered 16 tanks and 2 hydraulic lifts. In addition to overseeing the tanks and lifts' removal and coordinating subcontractors, Mr. Devaux serves as liaison to NYSDEC, NYC Housing Authority, and the NYC DEP to finish on an accelerated time schedule.

Phase II ESA/Remediation - Rockaway Beach Boulevard (Block # 16112) Oversight & Coordination - Mr. Devaux coordinated the investigation of a former Drycleaner Site as part of the redevelopment of the Arverne URA. Investigation activities included soil borings, groundwater borings, sub-surface vapor screening, as well as the installation of permanent groundwater wells.

Sive, Paget & Riesel, Carnegie Hill, NY

10,000-gallon UST Removal - Oversaw the removal of a No. 6 fuel oil UST, which included visual/written documentation and sampling from the vicinity of the tank. Since the tank was the focus of a lawsuit with the neighboring property, he collected product samples from various on and off site locations for forensic product analysis. Following the tank removal, he prepared a tank removal report for the client and NYSDEC. Mr. Devaux's visual & written documentation and report helped the client substantially in the on-going litigation regarding the spill.

Former Computer Circuits Facility - Hauppauge, NY

USEPA NPL Superfund Investigation - As project field manager, Mr. Devaux oversaw sub-contractors, field sampling crews, and the on-site field lab. Based on that lab's findings, he determined where to perform additional borings to delineate the PCE, TCE, and TCA contamination at the site. Throughout the project, he met with the USEPA case manager to discuss the progress of the investigation. Following the investigation's completion, he prepared portions of the RI/FS report.

Minmilt Realty - East Farmingdale, NY

O&M NYSDEC Inactive Hazardous Waste Site - Provides professional services to meet client's environmental engineering management needs. His regularly corresponds with the NYSDEC to report system status, monthly well water measurements, monthly influent and effluent sampling and analysis, monthly air sampling and analysis, quarterly groundwater sampling and analysis and routine O&M activities.

Brookhaven National Laboratory - Upton, NY

Environmental Directorate Project Support - Mr. Devaux worked on several environmental projects at BNL. At designated sites, he monitored well installation & operation and provided oversight for soil excavation, temporary well construction, air monitoring, soil & water sampling.

Shurgard Storage - Syosset, NY

Remediation Oversight & UIC Closure Plan - As part of the property transaction and prior to the storage's development, the client was required to clean out a drywell. Mr. Devaux prepared the UIC Closure Plan and coordinated remedial activities. Correlating remedial tasks with the Nassau County Health Department throughout the project, Mr. Devaux effectively addressed the agency's concerns leading to the successful closure of the site's environmental issues.

NYSDEC Investigations, Gasoline Stations NY Metro Area

Project Management - Mr. Devaux handled nearly 50 investigations, managing environmental issues at each of the sites. During UST removals and upgrades, he performed oversight of subsurface investigations, remedial system design pilots, construction, and maintenance. His involvement in the oversight of more than 20 tank removals/ upgrade projects put Mr. Devaux in daily contact with the NYSDEC in order to coordinate field activities and to satisfy their requirements at each site.

APPENDIX A SITE PHOTOGRAPHS

Photo 1 – View of the south side of the building.

Photo 2 – View inside the building showing clothing racks.

Photo 3 – Vinyl floor tiles in building (potential asbestos concern)

Photo 4 – Monitoring well located in the building.

Photo 5 – Tank vent on the roof.

Photo 6 – Fuel oil vent pipe located in the front of the building.
Photo 9 – View in the boiler room.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2005. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

EXECUTIVE SUMMARY

In spring 2005, Toll Brothers, Inc. (Toll Brothers) retained Environmental Liability Management of New York, LLC (ELM) to conduct a Phase II Soil and Ground Water Investigation at the 363 Bond Street property, Brooklyn, Kings County, New York (the project site or site). The legal definition of the project site is Tax Block 452, Lot 1. This report presents the findings of Phase II Investigation activities completed at the subject property. A summary of soil and ground water sampling activities, analytical results and a discussion of findings are summarized below.

The Phase II Investigation activities were initiated based on the 100-year industrial and manufacturing history of the site and the surrounding area. Historical uses of the site included an asphalt/cement works circa 1904, a paint manufacturer circa 1915, a garage with two 550-gallon buried gasoline tanks and auto repair shop circa 1939, and a radio parts manufacturer and an auto spray paint booth circa 1950. Since circa 1969, the northern portion of the site (closest to Bond Street) has been used as a wholesale grocery warehouse. A portion of the site was labeled “storage” on the 1979 Sanborn map, “plating” on the 1980 map and “storage” again on the 1981 map. The site is currently occupied by a clothing warehousing business. The objective of the Phase II Investigation was to identify whether soil and/or ground water have been impacted by current and/or historical uses on the project site and/or in the surrounding area, by historical fill material, and by releases from any chemicals currently or formerly stored on the project site.

On April 15, April 20 and 21 and on April 28, 2005, ELM conducted the Phase II Investigation activities, which consisted of the advancement of ten (10) soil borings, five (5) of which were completed as ground water monitoring wells. The borings and wells were located on the Bond Street sidewalk and inside the structure that occupies the entirety of the project site. A total of twenty (20) soil samples and four (4) ground water samples were collected during the Phase II Investigation activities. Monitoring well MW-3 was not sampled because approximately 6 inches of product were noted on the surface of the ground water table. Soil and ground water samples were analyzed for target compound list (TCL) volatile and

semivolatile organic compounds (VOCs and SVOCs) by EPA Methods 8260 and 8270, respectively; pesticides by EPA Method 8081; polychlorinated biphenyls (PCBs) by EPA Method 8082; and target analyte list (TAL) metals by EPA 6000/7000 Series.

The site geology includes an approximately 10- to 17-foot thick layer of fill underlain by a layer of clay. Based on field observations, evidence of petroleum contamination appeared limited to the overburden, as odors, staining and PID readings appeared to decrease in soil intervals in the clay layer. The clay layer appears to act as a barrier, restricting vertical migration of contaminants.

Evidence of petroleum contamination (odors, staining or elevated photoionization detector [PID] readings) was noted in all ten soil borings/ground water monitoring wells installed during this investigation. Soil was noted to be saturated with product in two boring locations: MW-5 and SB-1. Additionally, free product was encountered in two monitoring wells: MW-3 and MW-5; however, no free product was noted in the soil samples collected from MW-3.

Elevated concentrations of VOCs, above New York State Department of Environmental Conservation [NYS DEC] Technical and Administrative Guidance Memorandum 4046 [TAGM 4046] Recommended Soil Cleanup Objectives [RSCOs]) were noted in soil in five sampling locations: MW-3, MW-5, SB-1, SB-3 and SB-4. Free product was noted in the two borings/monitoring wells where elevated VOC concentrations were noted in soil: MW-3 and MW-5. Ground water in MW-3 was not sampled. Ground water in MW-5 was sampled, and five VOCs were detected above Class GA Standards: benzene, toluene, ethylbenzene and xylene (collectively referred to as 'BTEX') and vinyl chloride. The only other well where elevated VOCs were detected in ground water was MW-4; benzene was detected at an estimated concentration of 1J ppb in MW-4, which exceeds the Class GA Standard of 0.7 ppb.

SVOCs were detected in soil at concentrations atypical of urban fill material in 6 boring locations: MW-2, MW-5, SB-1, SB-3, SB-4 and SB-5. One or more soil samples collected from each of these boring locations contained concentrations of total SVOCs above 100,000

ppb. Samples from two of the locations, MW-5 and SB-1, contained concentrations of total SVOCs above 500,000 ppb, which is the TAGM 4046 RSCO for total SVOCs. The individual and total concentrations of SVOCs in deep soil samples were significantly lower than respective concentrations in shallow samples in all six locations with at least one sample with a total SVOC concentration greater than 100,000 ppb. Individual SVOCs were detected in ground water at concentrations above Class GA Standards in monitoring wells MW-2 and MW-5.

No PCBs were detected above applicable regulatory criteria in any of the 20 soil samples collected. PCBs were not detected in any of the 4 ground water samples collected.

Pesticides were detected in soil above TAGM 4046 RSCOs in two boring locations: MW-2 and MW-5. Pesticides were also detected in ground water above Class GA Standards in MW-5.

Metals were detected in soil above TAGM 4046 RSCOs in all 20 soil samples collected. With the exception of mercury and lead, metals were generally detected at concentrations typical of urban fill material. Mercury was detected at concentrations one order of magnitude greater than the TAGM 4046 RSCO of 0.1 ppm in soil collected from five boring locations: MW-2, MW-4, MW-5, SB-1 and SB-5. The maximum detected concentration was 19.5 ppm in soil sample MW-5/7.5-9.5. Additionally, although there is not a quantified RSCO for lead, the average background levels in metropolitan and suburban areas or near highways typically range from 200 to 500 ppm. Lead was detected in soil at concentrations exceeding the upper limit of the average background level in metropolitan areas in one or more samples collected from five boring locations: MW-2, MW-4, MW-5, SB-2 and SB-5. Lead was detected at concentrations ranging from 582 ppm to 1,450 ppm in these soil samples. Metals were detected in ground water at concentrations above Class GA Standards in all four ground water samples. The parameters and concentrations detected are typical of those detected in urban waterways, with the exception of arsenic and lead. Arsenic and lead were detected at concentrations above their respective Class GA concentrations in ground water collected from

monitoring well MW-5. These parameters were not detected above Class GA Standards in ground water collected from any other monitoring wells.

SUMMARY

Based on field observations, evidence of petroleum-contamination in soil was observed across the site. Soil was noted to be saturated with product in two boring locations, MW-5 and SB-1, and free product was encountered in two monitoring wells, MW-3 and MW-5. VOCs, primarily related to petroleum, were noted in soil collected from five boring locations at concentrations exceeding applicable regulatory criteria: SM-3, MW-5, SB-1, SB-3 and SB-4. Semivolatile organic compounds were detected in soil at total concentrations atypical of urban fill material in six boring locations: MW-2, MW-5, SB-1, SB-3, SB-4 and SB-5. Pesticides were detected in soil above applicable regulatory criteria in two boring locations: MW-2 and MW-5. Metals, primarily mercury and/or lead, were detected in soil at concentrations atypical of urban fill material in six sample locations: MW-2, MW-4, MW-5, SB-1, SB-2 and SB-5. Ground water appeared to have been impacted by VOCs in monitoring wells MW-4 and MW-5 and by SVOCs in monitoring wells MW-2 and MW-5. Monitoring well MW-5 appeared to have been additionally impacted by pesticides, arsenic and lead.

The industrial and manufacturing site history is varied and likely contributed to the soil and ground water contamination noted above. Current and former aboveground and underground storage tanks may have also contributed to this contamination. The site geology includes an approximately 10- to 17-foot thick layer of fill underlain by a layer of clay, which appears to act as a barrier, restricting vertical migration of contaminants.

DISCLAIMER

Environmental Liability Management of New York, LLC (ELM) has prepared this report based upon a review of information provided by the client as well as information collected and/or developed as part of the specific scope of work under this project. The report was prepared for the exclusive use of the client of record for the stated objectives relative to the subject property. No other warranty, express or implied, is made.

ELM does not purport to give legal advice. Any reference to legal issues or terms is provided as part of the general environmental risk assessment and is not a substitute for the advice of competent legal counsel.

1.0 INTRODUCTION

In the spring of 2005, Toll Brothers, Inc. (Toll Brothers) retained Environmental Liability Management of New York, LLC (ELM) to conduct a Phase II Soil and Ground Water Investigation at the 363 Bond Street property, Brooklyn, Kings County, New York (the “project site” or “site”). The legal definition of the project site is Tax Block 452, Lot 1. Please see Figure 1 for the Project Site Location. The Phase II Investigation activities were initiated based on the 100-year industrial and manufacturing history of the site and the surrounding area. The purpose of the Phase II investigation was to confirm the absence or presence of contaminants at concentrations above regulatory concern in soil and ground water on the subject property and evaluate whether any remedial action is required pursuant to federal, state, and local environmental laws and regulations. This report presents the findings of the Phase II Investigation activities completed at the subject property. A summary of the environmental history of the site, soil and ground water sampling activities, analytical results and a discussion of findings is presented below.

2.0 PREVIOUS STUDIES

Although no Phase I was performed on the project site, a Phase I Environmental Site Assessment (ESA) and a Phase II subsurface investigation were performed by ELM for the property located at 365 Bond Street, southwest-adjacent to the project site, across 1st Street. Additionally, a Phase II subsurface investigation was performed on the property located at 400 Carroll Street, northeast-adjacent to the project site, on the subject block. The Phase I ESA for the 365 Bond Street site revealed on- and off-site environmental conditions that warranted further investigation, including an on-site historical oil terminal (with large-volume aboveground storage tanks) and additional former industrial and manufacturing uses both on- and off-site. The 400 Carroll Street site was also a historical oil terminal with large-volume aboveground oil tanks and had other historical industrial uses that may have impacted soil and/or ground water. To determine if the properties were impacted by their historical uses, ELM performed Phase II subsurface investigations on the 400 Carroll Street and 365 Bond

Street properties. The Phase II investigations revealed evidence of petroleum contamination in soil and ground water beneath both properties.

The project 363 Bond Street site was studied as an ‘adjacent property’ to the 365 Bond Street Site in the Phase I ESA. Historical Sanborn Maps were reviewed for the 363 Bond Street site for the years 1904, 1915, 1939, 1950, 1969, 1977, 1980, 1981, and 1996. These maps indicated that the project site has over a 100-year history of manufacturing and industrial uses. Historical uses of the site included an asphalt/cement works circa 1904, a paint manufacturer circa 1915, a garage with two 550-gallon buried gasoline tanks and auto repair shop circa 1939, and a radio parts manufacturer and an auto spray paint booth circa 1950. Since circa 1969, the northern portion of the site (closest to Bond Street) has been used as a wholesale grocery warehouse. A portion of the site was labeled “storage” on the 1979 Sanborn map, “plating” on the 1980 map and “storage” again on the 1981 map. The site is currently occupied by a clothing warehousing business.

3.0 PHASE II INVESTIGATION ACTIVITIES

On April 15, April 20 and 21 and on April 28, 2005, ELM conducted the Phase II Investigation activities, which consisted of the advancement of ten (10) soil borings, five (5) of which were completed as ground water monitoring wells. The borings that were not converted to wells were labeled SB-1 through SB-5 and the borings that were converted to wells were labeled MW-1 through MW-5. A total of twenty (20) soil samples and four (4) ground water samples were collected during the Phase II Investigation activities. Monitoring well MW-3 was not sampled because approximately 6 inches of product was noted on the surface of the ground water table. Soil and ground water samples were analyzed for target compound list (TCL) volatile and semivolatile organic compounds (VOCs and SVOCs) by EPA Methods 8260 and 8270, respectively; pesticides by EPA Method 8081; polychlorinated biphenyls (PCBs) by EPA Method 8082; and target analyte list (TAL) metals by EPA 6000/7000 Series.

3.1. Sample Location Rationale

The borings and wells were located on the Bond Street sidewalk and inside the structure that occupies the entirety of the project site. The main objective of the placement of soil borings and ground water monitoring wells was to determine general site-wide soil and ground water conditions, including upgradient and downgradient ground water conditions with respect to ground water flow direction. However, several borings and wells were placed according to specific areas of concern as discussed below. The project site was occupied by a clothing warehousing operation; stored materials limited the locations where borings and ground water monitoring wells could be installed.

As discussed in Section 2.0 above, environmental concerns primarily relate to historical site manufacturing and industrial uses, similar uses in the surrounding area, historical fill material and historical chemical storage. During the recent site inspection, no stored chemicals were observed. A partial cellar was inspected in the northeastern portion of the site and a boiler was observed. A vent pipe and fill cap were observed in the sidewalk directly outside the garage; these items are likely associated with a former aboveground storage tank that was associated with the boiler in the cellar. Additionally, a historical Sanborn Map from 1939 indicated gasoline tanks west of the basement, in the north central portion of the site. Boring SB-5 and monitoring well MW-3 was located west-adjacent to the basement, in the vicinity of the gasoline tanks.

Soil and ground water conditions over the entire site area may have been impacted by historical on- and off-site manufacturing and industrial uses. Additionally, historical fill material of unknown origin is present across much of the project site. Soil and ground water conditions in the vicinity of the gasoline tanks may have been impacted by releases from these containers or from the mismanagement of chemicals that were stored in these vessels or used in historical manufacturing or industrial operations.

3.2. Methodology

At each of the ten boring locations, a hollow-stem auger rotary rig or Geoprobe rig with direct-push technology was used to core through any existing asphalt or concrete surface. Soil samples were collected either by driving a split spoon sampler into the subsurface at two-foot intervals or by driving a two-inch internal diameter probe with a Teflon liner into the subsurface at four-foot intervals until ground water was reached. Sampling continued until the clay layer was encountered; the clay layer was present at between 10 and 17 feet below grade at each boring/monitoring well location.

Recovered soil was transferred from either the split spoons or the Teflon liners into a sealable plastic bag. Soil gas was screened by placing the probe of a PID inside the plastic bag. Soil samples were classified using a modified Burmeister Soil Classification System by ELM field personnel. Please see Attachment A for Boring Logs.

Two soil samples were collected from each boring location based on field observations. If no field contamination (staining, odors or PID readings above background) was apparent, a sample from the two-foot interval immediately beneath the original ground surface (excluding any overlying asphalt or concrete) and a sample from the ground water interface were collected. If evidence of contamination was noted in any interval, one or both of the samples was (were) collected from the interval(s) exhibiting contamination or from the terminus of the boring. Soil samples were transferred from the sealable plastic bag to sample jars using dedicated decontaminated sampling spoons or latex/nitrile gloves.

The soil samples were containerized in accordance with EPA analytical protocols. Each sample was labeled, sealed, and placed in a chilled cooler for shipment to the laboratory. Soil samples were analyzed for volatile organic compounds (VOCs) (EPA Method 8260), semivolatile organic compounds (SVOCs) (EPA Methods 8270), polychlorinated biphenyls (PCBs) (EPA Method 8081), pesticides (EPA Method 8082) and target analyte list (TAL) metals (EPA Method 6010). Sufficient sample material was collected from each boring to

analyze for all parameters for each sample. Category A Deliverables were requested for this data set.

After the borings were completed, the borings were backfilled with soil cuttings and plugged with concrete. Any cuttings that were not replaced into the borings were drummed for off-site disposal.

Ground water monitoring wells were completed at five of the boring locations using the auger rig or Geoprobe. The monitoring wells were advanced using 4-1/4 inch hollow-stem augers and consisted of two-inch internal diameter PVC casing. A ten- to fifteen-foot slotted PVC screen was installed in the approximate top ten feet of ground water. A sand filter pack was placed in the annular space around the screen and extended approximately one foot above the screen or to one foot below the surface, whichever was deeper. The annular space around the well casing was sealed with bentonite for an interval of approximately one to two feet. A grout, consisting of a cement and bentonite mixture or an anti-shrink mixture, extended from the bentonite seal to a level of approximately two feet below ground level. The remaining annular space was sealed with a concrete cap and well apron (expanding cement). A locking well cap and a flush-mounted well cover were installed upon completion of the well. Drill cuttings were drummed for off-site disposal. Please see Attachment A for Boring Logs, which contain well construction information specific to each well.

Wells were developed on April 21, 2005, six days after monitoring wells MW-1, MW-2 and MW-3 were installed, and one day after monitoring wells MW-4 and MW-5 were installed. Prior to sampling, an electronic interface meter was used to measure water levels and product thickness, if any, in wells. The wells were developed using a Geotech Geopump 2 peristaltic pump and dedicated polyethylene tubing for each well. Turbidity was measured using a nephelometer, and wells were developed until the reading was 50 Nephelometric Turbidity Units (NTU) or less, or until at least 10 well volumes were evacuated. If fines were still visible in the well water after purging 10 well volumes, purging continued until the well water

was clear of visible fines or until 55 gallons were purged from the well. Development water was drummed for off-site disposal. Please see Attachment A for Well Development Logs.

In accordance with EPA protocol, the installed wells were sampled on April 28, 2005, seven days after development. Prior to sampling, an electronic interface meter was used to measure water levels and product thickness, if any, in wells. The wells were purged using a Geotech Geopump 2 peristaltic pump. Ground water quality parameters were measured using a QED, which measured pH, specific conductivity, temperature, dissolved oxygen and turbidity. The wells were purged until at least five well volumes were removed from the well. Turbidity was at or below 40 NTU in all wells at the time of sampling. Purge water was drummed for off-site disposal.

Ground water samples were collected using the Geotech Geopump 2 peristaltic pump. During sampling, water flow was maintained at approximately 150 milliliters per minute to minimize water disturbance and potential volatilization of certain chemicals. The ground water samples were containerized in accordance with EPA analytical protocols. Each sample was labeled, sealed, and placed in a chilled cooler for shipment to the laboratory. Ground water samples were analyzed for VOCs (EPA Method 8260), SVOCs (EPA Method 8270), PCBs (EPA Method 8081), pesticides (EPA Method 8082) and TAL metals (both filtered and unfiltered samples). Sufficient sample material was collected from all wells to analyze for all parameters. Category A Deliverables were requested for this data set. Please see Attachment A for the Well Sampling Logs.

During well development, approximately 6.36 inches of orange-brown light non-aqueous phase liquid (L-NAPL) was noted in monitoring well MW-3. This well was developed successfully from below the L-NAPL. After well development, approximately 3 inches of L-NAPL was removed from the well to determine whether the well would recharge between development and well sampling. During well sampling approximately 3.12 inches of orange-brown L-NAPL were encountered floating on top of the water in MW-3. A ground water sample was not collected from MW-3; however a sample of the product was collected for

holding at the laboratory for future analysis, if needed. Additionally, during well sampling, approximately 1.08 inches of brown L-NAPL were encountered floating on top of water in MW-5. This L-NAPL was pumped from the well and a water sample was collected after approximately 5 gallons of water were purged from the well.

3.3. Quality Assurance / Quality Control

3.3.1. Decontamination

Sampling equipment was dedicated or disposed after use to avoid contamination and cross-contamination of samples. During installation of MW-1, MW-2 and MW-3, augers were scrubbed with detergent and pressure cleaned between borings/wells locations. The remainder of wells and soil borings were installed by a Geoprobe utilizing disposable Teflon liners.

3.3.2. Sample Nomenclature

Soil samples were given two part names that included the boring or well name and the depth interval below grade from which the soil sample was collected. For example, soil sample SB-5/4.5-6.5 was collected from boring SB-5 from a depth of 4.5 to 6.5 feet below grade.

Ground water samples were named for the well from which the sample was extracted. For example, ground water sample MW-3 was collected from well MW-3.

3.3.3. Chain of Custody

To ensure the integrity of samples taken, a strict chain-of-custody record was maintained on each sample. This began during sampling with the entry in the sampler's field log of the sampling details:

- a) Date and time of sampling;
- b) Sample location (as specific as possible);
- c) The unique sample number;

- d) Sample description;
- e) Weather conditions (if applicable); and
- f) Any additional comments.

The chain-of-custody form was kept as a record of the sample's progress from the field to the laboratory where it was analyzed. The form included:

- a) The sample number;
- b) The sampler's name;
- c) Date of sampling;
- d) Location where the sample was taken;
- e) Signatures of people involved in the chain of possession; and
- f) Inclusive dates of possession of each person in the chain.

The chain-of-custody form accompanied the samples throughout the trip to the laboratory.

Included in the chain-of-custody record was a request to the laboratory for sample receipt and analysis information, including:

- a) Name of person receiving the sample;
- b) Laboratory sample number;
- c) Date of sample receipt;

- d) Sample allocation; and
- e) Analyses to be performed.

Upon arrival of samples at the laboratory, the sample custodian entered pertinent information for each sample in the laboratory's sample log book. The chain-of-custody is kept on file at the laboratory.

3.3.4. Laboratory Testing

Severn Trent Connecticut performed all analytical work for the Supplemental Subsurface (Phase II) Investigation. Severn Trent Connecticut's office in Shelton, Connecticut, is ELAP-certified (NYS DOH Certificate No. 10602 by the New York State Department of Health [NYSDOH]). The laboratory operates a Quality Assurance/Quality Control (QA/QC) program that consisted of proper laboratory practices (including the required chain-of-custody), an internal quality control program, and external quality control audits by New York State. Category A deliverables were produced for soil and ground water sampling results for this project. No trip blanks, field blanks, or blind duplicates were collected during this investigation.

4.0 RESULTS

Please see Tables 1 through 5 for a summary of soil sample results. Please see Tables 6 through 10 for a summary of ground water sampling results.

4.1. Field Observations

Borings and wells were advanced to between approximately 11 and 17 feet below grade. Ground water was detected at between approximately 1.25 and 6 feet below grade, depending on the location. A 10- to 17-foot thick layer of miscellaneous fill material was noted directly beneath the concrete or asphalt surface, and a clay layer was noted immediately below the miscellaneous fill material in each boring/well location. Borings terminated in the clay layer at all ten sample locations.

Evidence of petroleum contamination was noted in each boring/well location, including staining, odors, product and/or elevated PID readings. The highest PID reading, 745 parts per million, was noted in boring/well MW-5 in the soil interval 7.5 to 8 feet below grade. L-NAPL was noted in boring SB-1 and monitoring wells MW-3 and MW-5. In all ten boring/well locations, evidence of petroleum contamination diminished in the clay layer.

During well development, approximately 6.36 inches of orange-brown light non-aqueous phase liquid (L-NAPL) was noted in monitoring well MW-3. This well was developed successfully from below the L-NAPL. After well development, approximately 3 inches of L-NAPL were removed from the well to determine whether the well would recharge between development and well sampling. During well sampling, approximately 3.12 inches of orange-brown L-NAPL were encountered floating on top of the water in MW-3. A ground water sample was not collected from MW-3; however a sample of the product was collected for holding at the laboratory for future analysis, if needed. Additionally, during well sampling, approximately 1.08 inches of brown L-NAPL were encountered floating on top of water in MW-5. This L-NAPL was pumped from the well and a water sample was collected after approximately 5 gallons of water were purged from the well.

4.2. Soil Results

Please see Tables 1 through 5 for a summary of soil sample results. Soil sample results were compared to the New York State Department of Environmental Conservation's (NYS DEC's) Technical and Administrative Guidance Manual (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs). Metals results were additionally compared to Eastern United States Background Levels.

4.2.1. Volatile Organic Compounds

A summary of laboratory analysis of VOCs in soil samples is included in Table 1.

Ten volatile organic compounds (acetone, benzene, 2-butanone, cis-1,2-dichloroethene, ethylbenzene, methylene chloride, toluene, trichloroethene, vinyl chloride and xylenes) were

detected in one or more of the twenty soil samples that were collected and analyzed as part of this investigation. Four compounds were detected above TAGM 4046 RSCOs in one or more of the twenty samples:

- Benzene was detected in soil samples MW-5/7.5-9.5 and SB-3/6-8 at concentrations of 980J ppb and 3,100J ppb, respectively. The 'J' flag indicates that the actual concentration of benzene present in each sample was below the method detection limit and, therefore, the concentration was estimated. These estimated concentrations exceed the TAGM 4046 RSCO for benzene of 60 ppb.
- 2-Butanone was detected at a concentration of 8,000B ppb in soil sample MW-3/4-6; the TAGM 4046 RSCO for 2-butanone is 300 ppb. The 'B' flag indicates that 2-butanone was also detected in the laboratory blank.
- Toluene was detected at a concentration of 2,700J in soil sample SB-3/6-8. The 'J' flag indicates that the actual concentration of toluene present in the sample was below the method detection limit and, therefore, the concentration was estimated. This estimated concentration exceeds the TAGM 4046 RSCO for toluene of 1,500 ppb.
- Xylenes (total) were detected at concentrations exceeding the TAGM 4046 RSCO of 1,200 ppb in four soil samples: MW-5/7.5-9.5 (detected at an estimated concentration of 2,400J ppb), SB-1/4-6 (detected at a concentration of 3,700 ppb), SB-3/6-8 (detected at a concentration of 3,900 ppb), and SB-4/9-10.5 (detected at a concentration of 5,700 ppb). The 'J' flag indicates that the actual concentration of xylenes present in sample MW-5/7.5-9.5 was below the method detection limit and, therefore, the concentration was estimated. This estimated concentration and the other three concentrations exceed the TAGM 4046 RSCO for xylenes (total) of 1,200 ppb.

It should be noted that the laboratory analyzed five of the samples at dilutions ranging from 4 to 10. This caused method detection limits to increase, often to concentrations above TAGM 4046 RSCOs.

4.2.2. *Semivolatile Organic Compounds*

A summary of laboratory analysis of SVOCs in soil samples is included in Table 2.

SVOCs were detected above TAGM 4046 RSCOs in 15 of the 20 soil samples collected and analyzed. Total SVOCs were detected above the TAGM 4046 RSCO of 500,000 ppb in two soil samples: MW-5/7.5-9.5 (total SVOCs were detected at a concentration of 6,400,000 ppb) and SB-1/4-6 (total SVOCs were detected at a concentration of 991,100 ppb). The total concentrations of SVOCs in five other soil samples ranged from 100,000 ppb to 409,100 ppb. No SVOCs were detected above regulatory criteria in the two soil samples collected from MW-1: MW-1/3-4 and MW-1/9-10. In seven of the other nine sampling locations, total concentrations of concentrations of SVOCs were higher in the shallow sample than in the deep sample.

The seven polycyclic aromatic hydrocarbons (PAHs) that are carcinogens exceeded regulatory criteria in almost every soil sample where exceedances were noted: benzo(a)anthracene, benzo(a)pyrene, chrysene, dibenzo(a,h)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, and indeno(1,2,3-c,d)pyrene. Because the detected PAHs listed above are considered carcinogenic, they have very low TAGM RSCOs, which are almost always exceeded in urban fill material containing coal, coal ash, asphalt and combustion byproducts deposited from the air.

Eight other SVOCs exceed regulatory criteria in one or more of the fifteen soil samples where exceedances were noted: acenaphthene, anthracene, benzo(g,h,i)perylene, dibenzofuran, fluoranthene, fluorine, isophorone, 2-methylnaphthalene, naphthalene, phenanthrene and pyrene.

4.2.3. *PCBs*

A summary of laboratory analysis of PCBs in soil samples is included in Table 3. PCBs were detected in soil samples MW-4/12-14, SB-4/9-10.5 and SB-5/7-8 at total concentrations ranging from 8J ppb to 880 ppb. The 'J' flag indicates that the actual concentration of PCBs present in the soil sample was below the method detection limit and, therefore, the concentration was estimated. None of these detected total concentrations exceeds the TAGM RSCO of 1,000 ppb total for surface samples and 10,000 ppb total for subsurface samples.

4.2.4. *Pesticides*

A summary of laboratory analysis of pesticides in soil samples is included in Table 4. Pesticides were detected in 14 of the 20 soil samples collected. Two pesticides were detected above their respective TAGM 4046 RSCOs in soil samples:

- Dieldrin was detected at a concentration of 53 ppb in soil sample MW-2/1-3. This detected concentration exceeds the TAGM 4046 RSCO for dieldrin of 44 ppb.
- Heptachlor epoxide was detected at a concentration of 450 ppb in soil sample MW-5/7.5-9.5 and at a concentration of 32 ppb in soil sample MW-5/13-15. These concentrations exceed the TAGM 4046 RSCO for heptachlor epoxide of 20 ppb. It should be noted that both of these samples were collected from the same boring and the concentration of heptachlor epoxide decreased significantly from the shallow sample to the deep sample.

No other pesticides were detected above their respective TAGM 4046 RSCOs in any other soil samples.

4.2.5. *Metals*

A summary of laboratory analysis of target analyte list metals in soil samples is included in Table 5. Thirteen metals (arsenic, barium, cadmium, calcium, chromium, copper, iron, mercury, nickel, selenium and zinc) were detected above TAGM 4046 RSCOs in one or more

soil samples. TAGM RSCOs for metals are based on background concentrations in naturally occurring, native soil. Five of the metals that were detected in excess of their respective RSCOs (calcium, chromium, iron, magnesium and manganese) did not exceed the upper limit of their respective Eastern U.S. Background ranges in any soil sample. Neither the TAGM RSCOs nor the Eastern U.S. Background ranges are risk-based cleanup levels.

Mercury was detected at concentrations one order of magnitude greater than the TAGM 4046 RSCO (0.1 ppm) in five soil samples: 9.9 ppm in MW-2/1-3, 1.6 ppm in MW-4/6-8, 19.5 ppm in MW-5/7.5-9.5, 1.5 ppm in SB-1/4-6, and 2.4 ppm in SB-5/7-8.

Although there is not an RSCO for lead, the average background levels in metropolitan and suburban areas or near highways typically range from 200 to 500 ppm. The detected concentration of lead in six soil samples (MW-2/1-3, MW-2/9-10, MW-4/6-8, MW-5/7.5-9.5, SB-2/10-12 and SB-5/7-8) exceeded the upper limit of the average background level in metropolitan areas. Lead was detected at concentrations ranging from 582 ppm to 1,450 ppm in these soil samples.

4.3. Ground Water Results

Please see Tables 6 through 11 for a summary of ground water sampling results. Ground water sample results were compared to NYS DEC's Technical and Operational Guidance Series (TOGS) 1998 Class GA (drinking water) Standards and Guidance Values.

4.3.1. Volatile Organic Compounds

A summary of laboratory analysis of VOCs in ground water samples is included in Table 6. Five VOC were detected in one or more ground water samples: benzene, toluene, ethylbenzene, xylenes (total) and vinyl chloride.

- Benzene was detected at a concentration of 1J ppb in monitoring well MW-4. The 'J' flag indicates that the actual concentration of benzene present in the ground water sample was below the method detection limit and, therefore, the concentration was

estimated. This estimated concentration exceeds the Class GA Ground Water Standard of 0.7 ppb.

- Benzene, toluene, ethylbenzene, xylenes (total) and vinyl chloride were all detected at concentrations exceeding Class GA Ground Water Standards in monitoring well MW-5. Benzene was detected at a concentration of 59 ppb, which exceeds the Class GA Standard of 0.7 ppb. Vinyl chloride was detected at a concentration of 320 ppb, which exceeds the Class GA Standard of 2 ppb. Ethylbenzene was detected at an estimated concentration of 19J, toluene was detected at a concentration of 38 ppb and xylenes (total) were detected at a concentration of 94 ppb. The Class GA Standards for ethylbenzene, toluene and xylenes (total) are each 5 ppb. It should be noted that L-NAPL was detected in monitoring well MW-5 prior to sampling.

No other volatile organic compounds were detected in any of the ground water samples.

4.3.2. *Semivolatile Organic Compounds*

A summary of laboratory analysis of SVOCs in ground water samples is included in Table 7. SVOCs were detected above Class GA Ground Water Standards in two ground water samples: MW-2 and MW-5.

- Naphthalene was detected at a concentration of 23 ppb in monitoring well MW-2. This concentration exceeds the Class GA Standard of 10 ppb.
- Eleven SVOCs were detected at concentrations or estimated concentrations exceeding their respective Class GA Standards in monitoring well MW-5: acenaphthene, benzo(a)anthracene, benzo(a)pyrene, chrysene, dibenzofuran, fluorine, 2-methylnaphthalene, 2-methylphenol, naphthalene, phenanthrene and phenol. It should be noted that L-NAPL was detected in monitoring well MW-5 prior to sampling.

No other SVOCs exceeded Class GA Standards in any other ground water samples.

4.3.3. *PCBs*

A summary of laboratory analysis of PCBs in ground water samples is included in Table 8. No PCBs were detected in any ground water samples.

4.3.4. *Pesticides*

A summary of laboratory analysis of pesticides in ground water samples is included in Table 9. Pesticides were not detected in three of the four ground water samples collected: MW-1, MW-2 and MW-4. Five pesticides were detected in MW-5, two of which exceeded their respective Class GA Standards: 4,4'-DDE was detected at a concentration of 0.22 ppb and Heptachlor epoxide was detected at a concentration of 0.58 ppb. The Class GA Standards for these two parameters are both 0.01 ppb. The other three pesticides that were detected below Class GA Standards in MW-5 are Aldrin, beta-BHC and Endosulfan II.

4.3.5. *Metals*

A summary of laboratory analysis of total and dissolved target analyte list metals in ground water samples is included in Tables 10 and 11, respectively. The laboratory filtered the ground water samples for metals analysis and analyzed both filtered and unfiltered samples. The filtered sample is more representative of actual ground water conditions. Six metals were detected above Class GA Ground Water Standards in one or more filtered and unfiltered ground water samples: arsenic, cadmium, iron, lead, manganese and sodium. Arsenic was detected at a total estimated concentration of 35.7J ppb and a dissolved estimated concentration of 30.5J in monitoring well MW-5; both values exceed the Class GA Standard of 25 ppb. Lead was detected at a total concentration of 227 ppb and a dissolved concentration of 135 ppb in monitoring well MW-5; both values exceed the Class GA Standard of 25 ppb. Arsenic and lead were not detected in any other ground water sample. Cadmium was detected at a total concentration of 16.4 ppb and at a dissolved concentration of 15.3 ppb in monitoring well MW-4; both values exceed the Class GA Standard of 1.1 ppb. Cadmium was not detected in any other ground water sample.

Iron, manganese and sodium were detected in concentrations above Class GA Ground water Standards in most filtered and unfiltered samples. These four elements are earth minerals commonly found in ground water. Additionally, sodium is likely present in ground water because the Gowanus Canal is a tidally influenced saline water body. No other metals were detected above the Class GA Ground Water Standards in any of the ground water samples.

5.0 CONCLUSIONS

A total of 20 soil samples and 4 ground water samples were collected and analyzed for VOCs, SVOCs, PCBs, pesticides and metals. The site has a 100-year industrial history including use as an asphalt/cement works, a paint manufacturer, a garage with buried gasoline tanks, an auto repair shop, a radio parts manufacturer and an auto spray paint booth. Evidence of petroleum contamination (odors, staining or elevated photoionization detector [PID] readings) was noted in all ten soil borings/ground water monitoring wells installed during this investigation. Soil was noted to be saturated with product in two boring locations: MW-5 and SB-1. Additionally, product was encountered in two monitoring wells: MW-3 and MW-5. However, no product was noted in the soil samples collected from MW-3.

Elevated concentrations of VOCs, above New York State Department of Environmental Conservation [NYS DEC] Technical and Administrative Guidance Memorandum 4046 [TAGM 4046] Recommended Soil Cleanup Objectives [RSCOs]) were noted in soil in five sampling locations: MW-3, MW-5, SB-1, SB-3 and SB-4. Free product was noted in the two borings/monitoring wells where elevated VOC concentrations were noted in soil: MW-3 and MW-5. Ground water in MW-3 was not sampled. Ground water in MW-5 was sampled, and five VOCs were detected above Class GA Standards: benzene, toluene, ethylbenzene and xylene (collectively referred to as 'BTEX') and vinyl chloride. The only other well where elevated VOCs were detected in ground water was MW-4; benzene was detected at an estimated concentration of 1J ppb in MW-4, which exceeds the Class GA Standard of 0.7 ppb.

SVOCs were detected in soil at concentrations atypical of urban fill material in 6 boring locations: MW-2, MW-5, SB-1, SB-3, SB-4 and SB-5. One or more soil samples collected

from each of these boring locations contained concentrations of total SVOCs above 100,000 ppb. Samples from two of the locations, MW-5 and SB-1, contained concentrations of total SVOCs above 500,000 ppb, which is the TAGM 4046 RSCO for total SVOCs. The individual and total concentrations of SVOCs in deep soil samples were significantly lower than respective concentrations in shallow samples in all six locations with at least one sample with a total SVOC concentration greater than 100,000 ppb. Individual SVOCs were detected in ground water at concentrations above Class GA Standards in monitoring wells MW-2 and MW-5.

No PCBs were detected above applicable regulatory criteria in any of the 20 soil samples collected. PCBs were not detected in any of the 4 groundwater samples collected.

Pesticides were detected in soil above TAGM 4046 RSCOs in two boring locations: MW-2 and MW-5. Pesticides were also detected in ground water above Class GA Standards in MW-5.

Metals were detected in soil above TAGM 4046 RSCOs in all 20 soil samples collected. With the exception of mercury and lead, metals were generally detected at concentrations typical of urban fill material. Mercury was detected at concentrations one order of magnitude greater than the TAGM 4046 RSCO of 0.1 ppm in soil collected from five boring locations: MW-2, MW-4, MW-5, SB-1 and SB-5. The maximum detected concentration was 19.5 ppm in soil sample MW-5/7.5-9.5. Additionally, although there is not a quantified RSCO for lead, the average background levels in metropolitan and suburban areas or near highways typically range from 200 to 500 ppm. Lead was detected in soil at concentrations exceeding the upper limit of the average background level in metropolitan areas in one or more samples collected from five boring locations: MW-2, MW-4, MW-5, SB-2 and SB-5. Lead was detected at concentrations ranging from 582 ppm to 1,450 ppm in these soil samples. Metals were detected in ground water at concentrations above Class GA Standards in all four ground water samples. The parameters and concentrations detected are typical of those detected in urban waterways, with the exception of arsenic and lead. Arsenic and lead were detected at

concentrations above their respective Class GA concentrations in ground water collected from monitoring well MW-5. These parameters were not detected above Class GA Standards in ground water collected from any other monitoring wells.

SUMMARY

Based on field observations, evidence of petroleum-contamination in soil was observed across the site. Soil was noted to be saturated with product in two boring locations, MW-5 and SB-1, and free product was encountered in two monitoring wells, MW-3 and MW-5. VOCs, primarily related to petroleum, were noted in soil collected from five boring locations at concentrations exceeding applicable regulatory criteria: SM-3, MW-5, SB-1, SB-3 and SB-4. Semivolatile organic compounds were detected in soil at total concentrations atypical of urban fill material in six boring locations: MW-2, MW-5, SB-1, SB-3, SB-4 and SB-5. Pesticides were detected in soil above applicable regulatory criteria in two boring locations: MW-2 and MW-5. Metals, primarily mercury and/or lead, were detected in soil at concentrations atypical of urban fill material in six sample locations: MW-2, MW-4, MW-5, SB-1, SB-2 and SB-5. Ground water appeared to have been impacted by VOCs in monitoring wells MW-4 and MW-5 and by SVOCs in monitoring wells MW-2 and MW-5. Monitoring well MW-5 appeared to have been additionally impacted by pesticides, arsenic and lead.

The industrial and manufacturing site history is varied and likely contributed to the soil and ground water contamination noted above. Current and former aboveground and underground storage tanks may have also contributed this contamination. The site geology includes an approximately 10- to 17-foot thick layer of fill underlain by a layer of clay, which appears to act as a barrier, restricting vertical migration of contaminants.

FLUORENE RESULT IN ug/kg (RSCO = 50000 ug/kg)
INDENO(1,2,3-cd)PYRENE RESULT IN ug/kg (RSCO = 36400 ug/kg)
2-METHYLNAPHTHALENE RESULT IN ug/kg (RSCO = 13000 ug/kg)
NAPHTHALENE RESULT IN ug/kg (RSCO = 50000 ug/kg)
PHENANTHRENE RESULT IN ug/kg (RSCO = 50000 ug/kg)
PYRENE RESULT IN ug/kg (RSCO = 50000 ug/kg)
SVOC TICS RESULT IN ug/kg (RSCO = 500000 ug/kg)
DIELDRIN RESULT IN ug/kg (RSCO = 44 ug/kg)
HEPTACHLOR EPOXIDE RESULT IN ug/kg (RSCO = 20 ug/kg)

NOTES:

- 1) ALL RESULTS ARE IN ug/kg.
2) ONLY COMPOUNDS OF CONCERN ARE SHOWN.
3) **BOLD RESULTS EXCEED APPLICABLE NYDEC RESIDENTIAL SOIL CLEANUP OBJECTIVES (RSCO).**

Soil Boring Logs and Well Sampling Logs

Soil Boring Log

Boring No: SB-1			Job Number: 205045		Client: Toll Brothers, Inc.		Sheet 1 of 1			
			Location: 363 Bond Street - Brooklyn, NY		Weather: Sunny - 70		Drilling			
			Drilling Method: Geoprobe		Driller: Zebra		Start	Finish		
			Sampling Method: Teflon Liner		Logged By: Peter Malik/ELM		Date 4/20/2005	Date 4/20/2005		
			Depth to Water: 3.5'				Time 9:30	Time 10:30		
Recovery	Blow Count	Depth	Surface Conditions: Concrete		PID	Moisture	NAPL	Odor	Sample No.	Comments
			Soil Description							
3'	N/A	1'	0'-2' CONCRETE		0					
		2'								
		3'	2'-4' Black fine SANDY SILT with black staining.		82	Wet at 3.5'	Sheen	Slight petro-like		
		4'								
4'		5'	4'-6' Black fine SANDY SILT; saturated with product from 4'-4.5'.		727	Wet	YES	Strong petro-like	SB-1/4-6	Sample collected from 4'-6' interval at 10:30
		6'								
		7'	6'-8' Black fine SANDY SILT, some Gravel and Organics (wood).		643	Wet	Sheen	Strong petro-like		
		8'								
4'		9'	8'-10' Black fine SANDY SILT, some Gravel and Organics (wood), very wet.		0	Wet				
		10'								
		11'	10'-12' Black fine SANDY SILT, some Gravel and Organics (wood). CLAY and PEAT (meadowmat) encountered at 11.5'. END OF BORING.		10	Wet			SB-1/10-12	Sample collected from 10'-12' interval at 10:30
		12'								
		13'								
		14'								
		15'								
		16'								

Comments:

Ground water encountered at approximately 3.5' below grade. Top of clay layer encountered at approximately 11.5' below grade.

Soil Boring Log

Boring No: SB-2			Job Number: 205045		Client: Toll Brothers, Inc.		Sheet 1 of 1

	Drilling Method: Geoprobe	Driller: Zebra	Start
	Depth to Water: 6'	Logged By: Peter Malik/ELM	Finish
			Date 4/20/2005
			Date 4/20/2005
			Time 14:00
			Time 16:00
Depth	Surface Conditions:	Well Construction	Depth
	Soil Description	PID	
1	0'-2' CONCRETE.	0	1
2			2
3	2'-4' Brown SAND with some Gravel, Cobbles, and Brick.	0	3
4			4
5			5
6	4'-7' Light brown-gray SILT with some fine Sand.	8	6
7			7
8	7'-7.5' WOOD saturated with product. Petroleum-like odor.		8
	7.5'-8' Black medium to coarse SAND and GRAVEL.	745	
9			9
10	8'-12' Black medium to coarse SAND and GRAVEL. Strong petroleum-like odor; saturated with product.	110	10
11			11
12			12
13		13	13
14	12'-15' Black medium to coarse SAND and GRAVEL.	23	14
15			15
16	15'-16' CLAY (meadow mat).	49	16
17	END OF BORING.		17
18			18
19			19
20			20

Comments: Ground water encountered at approximately 6' below grade. Top of clay layer encountered at approximately 15' below grade. Samples collected from 7.5'-9.5' and 13'-15' intervals: MW-5/7.5-9.5 and MW-5/13-15.

Laboratory Deliverable Packages for Soil and Ground Water Sampling Events (Provided on CD):

Volume 1 of 2: May 6, 2005 – Soil Data – STL CT Job No. 209324

Volume 2 of 2: May 12, 2005 – Ground Water Data – STL CT Job No. 209387

ANALYTICAL REPORT

JOB NUMBER: 209324

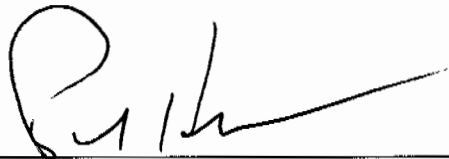

Prepared For:

Environmental Liability Management
250 West 57th Street
Suite 1029
New York, NY 10107

Project: CARROLL GARDENS

Attention: Sarah Lopas

Date: 05/06/2005

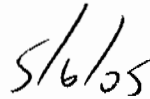

Signature

Name: Paul T. Hobart

Title: Project Manager

E-Mail: phobart@stl-inc.com

Date

STL Connecticut
128 Long Hill Cross Road
Shelton, CT 06484

This Report Contains (200) Pages

STL Report : 209324
ELM, INC.**Case Narrative**

Sample Receipt – All samples were received in good condition and at the proper temperature.

Organic Extraction - Samples were extracted according to method 3541/3550B. Samples for 8082 analysis were cleaned-up using procedures outlined in methods 3665A and 3660B (acid and sulfur clean-up). The following samples went to an elevated final volume for semi-volatile analysis:

2mL

MW-2-1	MW-2-9	MW-5-7.5	MW-5-13	SB-1-4
SB-2-6	SB-2-10	SB3 @ 6-8	SB4 @ 9-10.5	Sb5 @ 7-8

No other problems were encountered.

Semi-Volatile Organics - Semi-volatile organic samples were analyzed by capillary GC/MS according to NYSDEC Protocols using guidance provided in Method 8270C. The instrumentation used was a Hewlett-Packard Gas Chromatograph interfaced with a Mass Selective Detector.

There was no spike recovery for the compound, 2,4-dinitrophenol, and low recovery for 4,6-dinitro-2-methylphenol in 47708-2LCS and 47708-3LCD. It has been determined that the glass wool is the source of the problem and the laboratory is working to remedy the situation.

The following samples were analyzed at dilutions for target compounds:

MW-2-1	1:10
MW-3-4	1:20
MW-3-13	1:4
MW-4-6	1:2
MW-5-7.5	1:100
MW-5-13	1:5
SB-1-4	1:20
SB3 W6-8	1:10
SB4 WP-10.5	1:8
SB5 W7-8	1:4

Metals – ICAP metals were determined using a TJA61E trace ICAP; mercury was determined by cold vapor technique using a Perkin Elmer mercury analyzer; following guidance provided in SW846 according to methods: ICAP – 3050B/6010B; mercury-7471A.

No problems occurred during analysis. All appropriate protocols were employed. All data appears to be consistent.

Volatile Organics – Volatile organics were determined by purge and trap GC/MS using guidance provided in Method 5030B/8260B.

The spike compound percent recoveries were within the laboratory generated guidelines in the independent source quality control samples except for acetone in 47833-2LCS and chloromethane in 47797-2LCS.

The following samples were analyzed as medium level soils for high targets and/or high chromatography:

Sample ID	Dilution
MW-3-4	1:10
MW-5-7.5	1:4
SB-1-4	1:4
SB3 W6-8	1:5
SB4 W9-10.5	1:5

The following samples were analyzed twice due to results having surrogate recoveries outside QC limits and/or results exhibiting internal standard area suppression: MW-1-9, MW-2-1, MW-2-9, MW-3-13, MW-4-6, MW-4-12 and SB-2-10. One set of data was reported since matrix interference was proven.

Pesticides - Pesticide samples were analyzed by GC/ECD using guidance provided in Method 8081A. The instrumentation used was a Hewlett-Packard Gas Chromatograph equipped with an Electron Capture Detector (Ni63).

Surrogates were diluted out of sample MW-5-7.5.

The recovery of the surrogate, Decachlorobiphenyl, was outside of QC limits in samples MW-2-9, MW-3-13, MW-4-6, and SB4 W14-16 on both columns.

The surrogate, Decachlorobiphenyl, was diluted out of samples MW-2-1, MW-5-13, SB-1-4, SB3 W6-8, and SB4 W9-10.5 on the RTX-35 column.

The surrogate, Decachlorobiphenyl, was outside of QC limits in sample SB-2-6, SB5 W5-7, SB5 W5-7 MS, and SB5 W5-7 MSD on the RTX-35 column.

The following samples required dilutions for target compounds:

MW-2-1	1:5
MW-4-12	1:10
MW-5-7.5	1:50
MW-5-13	1:5
SB-1-4	1:5
SB3 W6-8	1:5
SB4 W9-10.5	1:5
SB5 W7-8	1:5

The laboratory routinely reports the higher result between the two columns of analysis. If the % RPD between the two columns was greater than 40%, the lower result was reported.

Polychlorinated Biphenyls (PCB's) - PCB samples were analyzed by GC/ECD using guidance provided in Method 8082. The instrumentation used was a Hewlett-Packard Gas Chromatograph equipped with an Electron Capture Detector (Ni63).

Samples SB-1-10, SB-2-10, SB3 W6-8, SB3 W10-12, SB4 W14-16, SB5 W7-8, and 47902-4SBLK required acid and sulfur cleanup prior to analysis.

The recovery of the surrogate, Decachlorobiphenyl, was outside of QC limits in samples MW-2-1, MW-5-7.5, and SB-1-4 on the RTX-CLPesticidesII column.

The recovery of the surrogate, Decachlorobiphenyl, was above QC limits in sample MW-4-12, SB4 W9-10.5, and SB5 W7-8 on the RTX-CLPesticides column.

The recovery of the surrogate, Tetrachlorometaxylene, was above QC limits in sample SB5 W5-7 on the RTX-CLPesticidesII column.

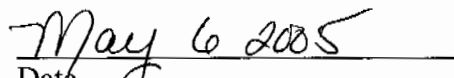

Sample SB4 W9-10.5 required a 1:5 dilution for target compounds.

The laboratory routinely reports the higher result between the two columns of analysis. If the % RPD between the two columns was greater than 40%, the lower result was reported.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

STL-Connecticut **Certification Summary (as of October 2004)**

The laboratory identification numbers for the STL-Connecticut laboratory are provided in the following table. Many states certify laboratories for specific parameters or tests within a category (i.e. method 325.2 for wastewater). The information in the following table indicates the lab is certified in a general category of testing such as drinking water or wastewater analysis. The laboratory should be contacted directly if parameter-specific certification information is required.

State	Responsible Agency	Certification	Expiration Date	Lab Number
Connecticut	Department of Health Services	Drinking Water, Wastewater	12/31/04	PH-0497
Maine	Department of Health and Environmental Services	Drinking Water, Wastewater/Solid, Hazardous Waste	04/18/06	CT023
Massachusetts	Department of Environmental Protection	Potable/Non-Potable Water	06/30/05	CT023
New Hampshire	Department of Environmental Services	Drinking Water, Wastewater	08/29/05	2528
New Jersey	Department of Environmental Protection	Drinking Water, Wastewater	06/30/05	46410
New York	Department of Health	CLP, Drinking Water, Wastewater, Solid/ Hazardous Waste NELAC	04/01/05	10602
Rhode Island	Department of Health	Chemistry...Non-Potable Water and Wastewater	12/30/04	A43
Utah	Department of Health	RCRA	05/31/05	2032614458

STL Report : 209387
ELM, INC.

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature.

A portion of the sample volume provided for the BNA analysis was filtered and preserved for the filtered metals analysis.

Organic Extraction - Samples were extracted according to method 3510C. No problems were encountered.

Semi-Volatile Organics - Semi-volatile organic samples were analyzed by capillary GC/MS according to NYSDEC Protocols using guidance provided in Method 8270C. The instrumentation used was a Hewlett-Packard Gas Chromatograph interfaced with a Mass Selective Detector.

The spike recovery for the compound, benzo(b)fluoranthene, was above QC limits in 47905-2LCS.

Sample MW-5 was analyzed at a 1:10 dilution for target compounds.

Volatile Organics – Volatile organics were determined by purge and trap GC/MS using guidance provided in Method 5030B/8260B.

The spike compound percent recoveries were within the laboratory generated guidelines in the independent source quality control sample.

Sample MW-5 was analyzed at a 1:5 dilution for high targets.

Pesticides - Pesticide samples were analyzed by GC/ECD using guidance provided in Method 8081A. The instrumentation used was a Hewlett-Packard Gas Chromatograph equipped with an Electron Capture Detector (Ni63).

The recovery of the surrogate, Tetrachlorometaxylene, was above QC limits in sample MW-5 on the RTX-1701 column.

The spike compounds, Endosulfan sulfate and Methoxychlor, coelute on the RTX-1701 column in 47904-2LCS, and were reported from the RTX-35 column.

The spike compounds, alpha Chlordane and EndosulfanI, coelute on the RTX-35 column in 47904-2LCS, and were reported from the RTX-1701 column.

The laboratory routinely reports the higher result between the two columns of analysis. If the % RPD between the two columns was greater than 40%, the lower result was reported.

Polychlorinated Biphenyls (PCB's) - PCB samples were analyzed by GC/ECD using guidance provided in Method 8082. The instrumentation used was a Hewlett-Packard Gas Chromatograph equipped with an Electron Capture Detector (Ni63).

The recovery of the surrogate, Decachlorobiphenyl, was slightly below QC limits in sample MW-5.

Metals – ICAP metals were determined using a TJA61E trace ICAP; mercury was determined by cold vapor technique using a Perkin Elmer mercury analyzer; following guidance provided in SW846 according to methods: ICAP – 3010A/6010B; mercury-7470A.

Sodium was outside the linear range of the calibration for all samples except MW-4 (total and filtered). No other problems occurred during analysis. All appropriate protocols were employed. All data appears to be consistent.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Director or his designee, as verified by the following signature.

REFERENCES AND NOTES

Report Date: 05/12/2005

REPORT COMMENTS

- 1) All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.
- 2) Soil, sediment and sludge sample results are reported on a "dry weight" basis except when analyzed for landfill disposal or incineration parameters. All other solid matrix samples are reported on an "as received" basis unless noted differently.
- 3) Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.
- 4) The test results for the noted analytical method(s) meet the requirements of NELAC. Lab Cert. ID# 10604
- 5) According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH Field) they were not analyzed immediately, but as soon as possible on laboratory receipt.

Glossary of flags, qualifiers and abbreviation

Inorganic Qualifiers (Q-Column)

- U Analyte was not detected at or above the reporting limit.
- < Not detected at or above the reporting limit.
- J Result is less than the RL, but greater than or equal to the method detection limit.
- B Result is less than the CRDL/RL, but greater than or equal to the IDL/MDL.
- S Result was determined by the Method of Standard Additions.

Inorganic Flags (Flag Column)

- ICV,CCV,ICB,CCB,ISA,ISB,CRI,CRA,MRL: Instrument related QC exceed the upper or lower control limits.
- * LCS, LCD, MD: Batch QC exceeds the upper or lower control limits.
- + MSA correlation coefficient is less than 0.995.
- 4 MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
- E SD: Serial dilution exceeds the control limits.
- H MB, EB: Batch QC is greater than reporting limit or had a negative instrument reading lower than the absolute value of the reporting limit.
- N MS, MSD: Spike recovery exceeds the upper or lower control limits.
- W PS: Post-digestion spike was outside 85-115% control limits.

Organic Qualifiers (Q - Column)

- U Analyte was not detected at or above the reporting limit.
- ND Compound not detected.
- J Result is an estimated value below the reporting limit or a tentatively identified compound (TIC).
- Q Result was qualitatively confirmed, but not quantified.
- C Pesticide identification was confirmed by GC/MS.
- Y The chromatographic response resembles a typical fuel pattern.
- Z The chromatographic response does not resemble a typical fuel pattern.
- E Result exceeded calibration range, secondary dilution required.

Organic Flags (Flags Column)

- MB,EB, MLE: Batch QC is greater than reporting limit.
- * LCS, LCD, CCV, MS, MSD, Surrogate, RS:Batch QC exceeds the upper or lower control limits.
- A Concentration exceeds the instrument calibration range or below the reporting limit.
- B Compound was found in the blank.
- D Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution will be flagged with a D.
- H Alternate peak selection upon analytical review
- I Indicates the presence of an interference, recovery is not calculated.
- M Manually integrated compound.
- P The lower of the two values is reported when the % difference between the results of two GC columns is greater than 25%.

QUALITY ASSURANCE METHODS

REFERENCES AND NOTES

Report Date: 05/12/2005

Abbreviations

Batch	Designation given to identify a specific extraction, digestion, preparation set, or analysis set
CAP	Capillary Column
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CF	Confirmation Analysis
CRA	Low Level Standard Check - GFAA; Mercury
CRI	Low Level Standard Check - ICP
Dil Fac	Dilution Factor
DL	Secondary dilution and analysis
DLFac	Detection Limit Factor
DSH	Distilled Standard - High Level
DSL	Distilled Standard - Low Level
DSM	Distilled Standard - Medium Level
EB	Extraction Blank
ICB	Initial Calibration Blank
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
ISA	Interference Check Sample A
ISB	Interference Check Sample B
Job No.	The first six digits of the sample ID which refers to a specific client, project and sample group
Lab ID	An 8 number unique laboratory identification
LCD	Laboratory Control Standard Duplicate
LCS	Laboratory Control Standard with reagent grade water or a matrix free from the analyte of interest
MB	Method Blank or (PB) Preparation Blank
MD	Method Duplicate
MDL	Method Detection Limit
MLE	Medium Level Extraction Blank
MRL	Method Reporting Limit Standard
MSA	Method of Standard Additions
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not Detected
PACK	Packed Column
PREPF	Preparation factor used by the Laboratory's Information Management System (LIMS)
PS	Post Spike
PSD	Post Spike Duplicate
RA	Re-analysis
RE	Re-extraction and analysis
RL	Reporting Limit
RPD	Relative Percent Difference of duplicate (unrounded) analyses
RRF	Relative Response Factor
RS	Reference Standard
RT	Retention Time
RTW	Retention Time Window
SampleID	A 9 digit number unique for each sample, the first six digits are referred as the job number
SCB	Seeded Control Blank
SD	Serial Dilution
UCB	Unseeded Control Blank

One or a combination of these data qualifiers and abbreviations may appear in the analytical report.

STL-Connecticut Certification Summary (as of May 2005)

The laboratory identification numbers for the STL-Connecticut laboratory are provided in the following table. Many states certify laboratories for specific parameters or tests within a category (i.e. method 325.2 for wastewater). The information in the following table indicates the lab is certified in a general category of testing such as drinking water or wastewater analysis. The laboratory should be contacted directly if parameter-specific certification information is required.

State	Responsible Agency	Certification	Expiration Date	Lab Number
Connecticut	Department of Health Services	Drinking Water, Wastewater	12/31/06	PH-0497
Maine	Department of Health and Environmental Services	Drinking Water, Wastewater/Solid, Hazardous Waste	04/18/06	CT023
Massachusetts	Department of Environmental Protection	Potable/Non-Potable Water	06/30/05	CT023
New Hampshire	Department of Environmental Services	Drinking Water, Wastewater	08/29/05	2528
New Jersey	Department of Environmental Protection	Drinking Water, Wastewater	06/30/05	CT410
New York	Department of Health	CLP, Drinking Water, Wastewater, Solid/ Hazardous Waste NELAC	04/01/06	10602
Rhode Island	Department of Health	Chemistry...Non- Potable Water and Wastewater	12/30/05	A43
Utah	Department of Health	RCRA	05/31/05	2032614458

1.0 PURPOSE

Environmental Liability Management, LLC (ELM), on behalf of Toll Gowanus, LLC (Toll), is pleased to present this Remedial Action Plan (RAP) to remediate the property located at 363 Bond Street (Tax Block 452, Lot 1), 365 Bond Street (Tax Block 458, Lot 1) and 400 Carroll Street (Tax Block 452, Lot 15), Brooklyn, New York (collectively referred to as the Project Site). A site location map is presented in Figure 1, and a site plan is presented in Figure 2.

As the Project Site is currently in the City Environmental Quality Review (CEQR) process, the remedial measures presented herein are consistent with those presented in Chapter 11 – Hazardous Materials of the Draft Environmental Impact Statement for the 363-365 Bond Street Site (the Project Site).

1.1. Summary of Environmental Conditions and Remedial Measures

The following is a summary of environmental conditions at the Project Site. The environmental conditions are discussed in detail in the previously submitted Remedial Investigation Report (RIR) [Appendix A], dated November 21, 2008 , prepared by ELM and provided in Section 2.2 of this RAP.

- Constituents detected in soil and groundwater at the Project Site included petroleum-related volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and PAHs typically associated with cinders and asphalt in urban fill material. The extent of these constituents appeared to be limited to the fill material present above the layer of organic clay, which is located at depths from 5 to 17 feet below grade. The highest concentrations of these compounds were detected on the southwestern portion of 363 Bond Street, the eastern portion of 365 Bond Street and the central portion of 400 Carroll Street.
- Free-phase petroleum product was noted beneath the southwestern portion of 363 Bond Street.

The following is a summary of the remedial measures which are presented in detail in Section 4.0 of this RAP:

- Any storage tanks discovered during excavation will be removed and disposed of in accordance with all applicable federal, state, and local regulations.

- Areas where free-phase product is encountered in soils will be excavated down to 2 feet into the water table (approximately 7 feet below grade) and the excavated soils will be disposed off-site. These areas are known to be present on the southwestern portion of the 363 Bond Street parcel. All excavated soils will be disposed of in accordance with all applicable regulations.
- After free-phase product excavation, in-place stabilization or chemical oxidation of soils will be performed in areas where elevated BTEX and SVOCs are still present at concentrations that cannot be attributed to urban fill.
- A vapor barrier will be installed beneath all building foundations. In addition to the vapor barrier, a sub-slab depressurization system will be installed beneath building foundations that will be above the groundwater table.
- Any exposed areas will be capped with two feet of clean fill.
- All remedial activities will be performed in accordance with the Construction Health and Safety Plan (CHASP), included in Appendix E.
- Soils stockpiled on-site will be covered with polyethylene sheeting.
- Dust suppression will be maintained during soil disturbance.

2.0 SITE DESCRIPTION

2.1. General Information

The Project Site encompasses approximately three acres of land (excluding streets) along the Gowanus Canal, and is currently occupied by warehouses, open vehicle storage, and vacant land and buildings. The proposed project will redevelop the Project Site with a predominantly residential development that will include market-rate and affordable housing with a community facility, commercial space and accessory parking. In addition, the proposed project will provide approximately 0.7 acres of publicly-accessible waterfront open space on the Gowanus Canal along the entire project waterfront from 2nd Street on the south to Carroll Street on the north.

The Project Site is located at approximately 10 feet above mean sea level (based on USGS maps). The property is relatively flat but slopes downwards about 5 feet toward the southeast

towards the Gowanus Canal. Depth to groundwater ranges from four to six feet below grade and is presumed to flow towards the Canal; depth to groundwater and direction of flow are expected to vary with seasonal and tidal fluctuations. The Project Site geology includes fill material (from 6 to 17 feet thick) above a layer of clay (from 8 to 15 feet thick).

2.1.1. *Project Description*

The Site is proposed to be redeveloped with a mix of residential, commercial, community facility, and open space uses, as well as accessory parking. A mix of housing types is proposed, with both market-rate and affordable units. The proposed project would include three new buildings on each block (see Appendix B). The range of building heights would be from 4 to 12 stories (up to approximately 125 feet) with three principal design elements: (1) low-rise building components of approximately 60 feet (6 stories) fronting on Bond Street; (2) low-rise “townhouse” components of approximately 43 feet (4 stories) along the midblocks of 1st and 2nd Streets; and (3) low to mid-rise building components of 5 to 12 stories (up to 125 feet maximum) facing the waterfront open space. Each block would have an enclosed accessory parking garage for the use of its residents that would be located on the ground floor of the buildings. All buildings will be constructed above grade.

2.2. *Site Environmental History*

ELM performed three Phase II Environmental Site Investigations (ESIs) on the Project Site. The Phase II ESIs were specifically targeted to investigate the recognized environmental conditions identified in a prior Phase I ESA characterized subsurface conditions. As part of these investigations, a total of 32 soil borings were advanced and sampled; a total of 16 groundwater monitoring wells were completed and sampled; and a total of 6 test pits were excavated and sampled across the Project Site. A total of 59 soil samples were collected from soil borings and/or test pits and 17 groundwater samples were collected from groundwater monitoring wells. Borings, monitoring wells and/or test pits were distributed relatively evenly across the Project Site or were targeted towards specific areas of potential environmental concern, such as in the vicinity of suspected underground storage tanks. Groundwater monitoring wells were located in both up gradient and down gradient locations on all three lots. Please see Figures 3 through 5 for boring, test pit, and monitoring well locations. Additional information regarding the investigations performed at the Subject Property is provided in the November 21, 2008 RIR, included in Appendix A.

2.3. Investigation Findings and Conclusions

2.3.1. Soil Findings

With regard to site soils, in general, evidence of urban fill (presence of miscellaneous fill materials petroleum-like odors, ash, ceramic, brick, etc. in soils) was ubiquitous above a confining clay layer and across all three parcels that comprise the Project Site. Laboratory analytical results indicated that very few primary petroleum constituents (benzene, toluene, ethylbenzene and/or toluene - BTEX) were detected in soil samples above regulatory criteria and several SVOCs (primarily polycyclic aromatic hydrocarbons – PAHs) and metals were detected above regulatory criteria.

In addition to these findings, one or more “hot spots” were identified on each of the three parcels. For the purpose of this report, a hot spot is defined as:

1. A soil boring location where petroleum-saturated soils were observed in any soil interval or a monitoring well where free product was gauged on the water table;
2. A soil boring location where primary petroleum constituents (BTEX) were detected above regulatory criteria; and/or
3. A soil boring location where SVOCs were detected at concentrations above regulatory criteria at concentrations that indicate that their presence is not due to urban fill alone (generally, boring locations where total SVOCs were detected above 100 ppm).

A parcel by parcel discussion of identified hot spots is presented in Sections 2.3.1.1 through 2.3.1.3. Please refer to Figures 3 through 8 for the locations of monitoring wells and soil borings discussed in these Sections.

It should be noted that the site geology includes an approximately 10- to 17-foot thick layer of fill underlain by a layer of clay, which appears to act as a barrier, restricting vertical migration of contaminants.

2.3.1.1. Hot Spots Identified on 363 Bond Street

Based on field observations and laboratory results, the following hot spots were identified on 363 Bond Street:

- Soil was noted to be saturated with product in two on-site boring locations, MW-5 and SB-1, and free product was encountered in one on-site monitoring well, MW-5. Additionally, free product was encountered in off-site monitoring well MW-3, which is located on 1st Street, adjacent to the southwest corner of 363 Bond Street.
- BTEX were noted in soil collected from five boring locations at concentrations exceeding applicable regulatory criteria: SM-3, MW-5, SB-1, SB-3 and SB-4.
- SVOCs were detected in soil at total concentrations above 100 ppm in six boring locations: MW-2, MW-5, SB-1, SB-3, SB-4 and SB-5. The total SVOC concentrations in SB-1 (991 ppm) and MW-5 (6,400 ppm) exceed the TAGM for total SVOCs of 500 ppm; soils from the remaining borings were detected below the TAGM total of 500 PPM.

In addition to these hot spots, pesticides were detected in soil slightly above applicable regulatory criteria in two boring locations: MW-2 and MW-5. The pesticide dieldrin was detected at a concentration of 53 ppb in soil boring MW-2, slightly above the TAGM 4046 RSCO of 44 ppb. Heptachlor epoxide was detected at concentrations of 450 ppb and 32 ppb in soil samples from boring MW-5, above the TAGM 4046 RSCO of 20 ppb.

No PCBs were detected in any soil samples above regulatory criteria. The metals detected in soil samples were consistent with those expected in urban fill materials.

Please see Figure 3 for a pictorial depiction of hot spot locations.

2.3.1.2. Hot Spots Identified on 365 Bond Street

Based on field observations and laboratory results, the following hot spots were identified on 365 Bond Street:

- BTEX were detected above applicable regulatory criteria in two sample locations: B-3 and B-5.
- SVOCs were detected in soil at total concentrations above 100 ppm in one boring location: MW-1. The total concentration in MW-1, 172.7 ppm, does not exceed the TAGM for total SVOCs of 500 ppm.

No petroleum-saturated soils were observed in any soil interval in any soil boring and no free product was gauged in any monitoring well. No PCBs or pesticides were detected in soil above applicable regulatory criteria in any soil samples. The metals detected in soil samples were consistent with those expected in urban fill materials.

Please see Figure 4 for a pictorial depiction of hot spot locations.

2.3.1.3. *Hot Spots Identified on 400 Carroll Street*

Based on field observations and laboratory results, the following hot spots were identified on 400 Carroll Street:

- BTEX were detected above applicable regulatory criteria in six sample locations: SB-1, SB-3, SB-4, SB-8, TP-5 and TP-6.
- SVOCs were detected in soil at total concentrations above 100 ppm in one boring location: SB-11. The total concentration in SB-11, 107.3 ppm, does not exceed the TAGM for total SVOCs of 500 ppm.

No petroleum-saturated soils were observed in any soil interval in any soil boring and no free product was gauged in any monitoring well. No PCBs or pesticides were detected in soil above applicable regulatory criteria in any soil samples. The metals detected in soil samples were consistent with those expected in urban fill materials.

Please see Figure 5 for a pictorial depiction of hot spot locations.

2.3.2. *Groundwater Findings*

Free-phase petroleum product was observed in monitoring well MW-5 on the 363 Bond Street parcel. Limited evidence of petroleum contamination in groundwater (BTEX detected above NYS DEC Technical and Operational Guidance Series [TOGS] Class GA Standards and Guidance Values) was noted in monitoring wells MW-4 and MW-5 on 363 Bond Street; and monitoring well MW-1 and temporary well points (collocated with soil borings) SB-2, SB-3, SB-6 and SB-11 on 400 Carroll Street. SVOCs were detected above Class GA standards in temporary well points (collocated with soil borings) SB-7 and SB-11 on 363 Bond Street; and soil borings SB-7 and SB-11 on 400 Carroll Street.

The VOC and SVOC impacts to groundwater appear to be limited to the 363 Bond Street and 400 Carroll Street parcels. Additionally, VOCs and SVOCs were detected above applicable regulatory criteria in one off-site well (PZ) located upgradient and off-site of 365 Bond Street, suggesting that the source of this contamination was located off-site.

Pesticides were detected in monitoring wells MW-4 and MW-5 on 363 Bond Street above Class GA Standards and Guidance Values. Total PCBs were detected at a concentration above the Class GA Standard of 0.1 microgram per liter ($\mu\text{g/L}$) in one groundwater sample, SB-7/TW, collected from a temporary well point collocated with soil boring SB-7 on 400 Carroll Street, where the total detected concentration for PCBs was 0.11J $\mu\text{g/L}$. The “J” flag indicates that the concentration of a compound was detected below the reporting limit and was, therefore, estimated.

Additionally, various earth metals commonly seen in groundwater (i.e. iron, manganese, magnesium, and sodium) were detected in groundwater monitoring wells throughout the Project Site at concentrations above Class GA Standards. The presence of magnesium and sodium are likely explained by the fact that the Gowanus Canal is a tidally influenced saline water body and likely has a hydraulic connection with the site groundwater.

Please see Figures 6 through 8 for a pictorial summary of groundwater results.

3.0 REMEDIAL ACTION PLAN

The proposed remedial action is consistent with Chapter 11 – Hazardous Materials of the Draft Environmental Impact Statement for the 363-365 Bond Street Site (the Project Site) and with a Remedial Action Plan prepared for NYC DEP by ELM and dated January 20, 2009.

3.1. Proposed Remedial Action

The proposed remedial action will actively remediate hot spots identified during previous subsurface testing programs and will include a series of overlapping engineering controls to avoid any effects from the limited residual contamination that will remain on-site after Project Site redevelopment. The following subsections discuss the specific parts of the remedial action.

3.1.1. *Removal of Stored Chemicals/Storage Tanks*

Chemicals stored in aboveground and underground storage tanks, drums or other containers will be removed from the Project Site prior to demolition or construction activities in accordance with all applicable federal, state and local regulations. Any tanks or drums found will be removed and registered as required by all applicable laws, rules and regulations.

3.1.2. *Soil Excavation and Disposal*

Areas where free-phase product is encountered in soils will be excavated down to 2 feet into the water table (approximately 7 feet below grade) and the excavated soils will be disposed off-site. These areas are present in two contiguous locations: in the vicinity of soil boring SB-1 and monitoring well MW-5 on the 363 Bond Street parcel. In each location, petroleum-saturated soils are presumed to extend to an area approximately 25-feet by 25-feet (625 sf). Because these borings are proximate to each other, the presumed extent of petroleum-saturation for each location overlaps with the presumed extent for the other location. Combined, these two areas are approximately 1,250 square feet in area. These two areas represent the preliminary extents of excavation for free-phase soil hot spots. The areas were roughly determined by half-way points to the next closest borings with no free-phase product in soils or the property boundaries, whichever was nearer. The excavation in these areas will commence between boring SB-1 and monitoring well MW-5, and will advance laterally in all directions until no further evidence of free-phase product remains, or the property boundary is reached, whichever is closer. Based on an excavation depth of 7 feet, the presumed excavation should yield approximately 325 cubic yards of soil. Should, upon completion of the planned excavation, free-phase petroleum product be noted attempts to remove it will be undertaken until no visible free product is present. Any deviation in this work plan will be reviewed and approved by DEC before it is undertaken.

Additionally, any soils excavated during the project will be disposed of in accordance with applicable federal, state and local regulations. If soils would be temporary stockpiled on-site, the stockpiles will be covered with protective polyethylene sheeting.

3.1.3. *In-Situ Soil Stabilization or Chemical Treatment of Residual Contamination*

Soil stabilization is a physiochemical process where additives are mixed with soil to minimize the rate of contaminant migration from the soil and to reduce the toxicity of the resulting soil

matrix. In stabilization, contaminants are fully or partially bound by the addition of supporting media and binders, such as Portland cement and bentonite clay. If the soil stabilization approach is selected, a site-specific stabilization mix will be prepared based on results of a bench-scale mixing study, and the stabilization mix will be applied in-situ through the use of conventional earth moving equipment, to a depth of 7 feet below existing grade. Post-remedial sampling of the stabilized soil mass will be performed to confirm the effectiveness of the remedy.

Chemical oxidation is a process during which an oxidizing agent is added to transform the constituents of concern. For example, an organic molecule can be converted to carbon dioxide and water or to an intermediate product that is less toxic than the original. Chemical oxidation is a well-established technology that is capable of destroying a wide range of organic molecules, including those found in petroleum products. Chemical oxidation can be performed in-situ, by mixing the soils with an oxidant/water mix or by injecting the oxidant/water mix directly into the subsurface. The preferred type of oxidant for this site is RegenOx[™]. This product maximizes in-situ performance by using a solid alkaline oxidant that employs a sodium percarbonate complex with a multi-part catalytic formula. RegenOx[™] directly oxidizes contaminants while its unique catalytic component generates a range of highly oxidizing free radicals that rapidly and effectively destroy the range of target contaminants. If the chemical oxidation alternative is selected, ELM will coordinate and oversee the RegenOx[™] application to a depth of 7 feet below existing grade and will perform the subsequent groundwater effectiveness monitoring.

In-place stabilization or chemical oxidation of soils will be performed in areas where elevated BTEX and SVOCs are present at concentration that cannot be attributed to urban fill (i.e. hot spots). The locations known to exhibit these characteristics are:

- a. On the 363 Bond Street parcel in the vicinity of soil borings SB-1, SB-3 and SB-4 and monitoring well MW-5;
- b. On the 365 Bond Street parcel in the vicinity of soil boring B-5 and monitoring well MW-3; and
- c. On the 400 Carroll Street parcel in the vicinity of soil borings SB-1, SB-3, SB-4 and SB-8, monitoring well MW-5, and test pits TP-5 and TP-6.

The proposed areas of stabilization or chemical oxidation at the above locations are as follows:

- a. 363 Bond Street: a 50-foot by 50-foot area (2,500 sf) on the western portion and a 50-foot by 20-foot area (1,000 sf) on the eastern portion.
- b. 365 Bond Street: a 90-foot by 90-foot area (8,100 sf) on the eastern portion.
- c. 400 Carroll Street: a 40-foot by 40-foot area (1,600 sf) on the southeast portion, a 25-foot by 25-foot area (625 sf) on the central portion, and a 60-foot by 25-foot area (1,500 sf) on the northwest portion.

These areas were roughly determined by half-way points to the next closest boring or test pit with no elevated BTEX or non-urban fill related SVOCs, or the property boundaries, whichever was nearer. Based on a stabilization or oxidation depth of 7 feet, the presumed volumes of treated soil will be 910 cubic yards on 363 Bond Street, 2,100 cubic yards on 365 Bond Street, and 970 cubic yards on 400 Carroll Street.

If additional areas of contamination are discovered upon demolition of the existing buildings or upon future testing required by NYC DEP, these areas will be remediated according to the logic and methods in Sections 3.1.2 and 3.1.3.

3.1.4. Soil Vapor Barrier and Sub-Slab Depressurization System (SSDS)

A vapor barrier will be placed beneath the proposed building foundations in accordance with the barrier's manufacturer's specifications. Specifications for a 15-mil GSE-brand vapor barrier are attached as Appendix F. A vapor barrier other than the 15-mil GSE barrier may ultimately be selected and installed at the Site, in which case the manufacturer's specifications of the installed vapor barrier will be provided to the NYS DEC.

Additionally, a passive sub-slab depressurization system (SSDS) will be installed beneath all on-site buildings with slabs above the water table. The SSDS plan is included in Appendix C.

3.1.5. Site Capping

The entire Project Site will be capped with building foundations, concrete/asphalt walkways and sidewalks, and landscaped areas. The landscaped areas will be capped with two feet of clean fill/top soil. Prior to importing any clean fill/top soil onto the Project Site any available laboratory data would be obtained and submitted to NYC DEP for approval. If data was not available or

insufficient, the fill/top soil would first be segregated at the source/facility and sampled by qualified environmental personnel for laboratory analysis. Sampling would be conducted at a frequency no less than one sample for every 250 cubic yards and samples would be analyzed for Target Compound List (TCL) VOCs, SVOCs, pesticides, PCBs and TAL Metals by a NYS DOH-certified laboratory. Results would be compared to TAGM 4046 RSCOs and presented to NYC DEP for review. Only upon receipt of written approval from the NYC DEP will the clean fill/top soil be imported for use on the Project Site. The clean fill/top soil will not contain any construction and demolition debris. A highly visible demarcation barrier (i.e. orange construction fence or equivalent) will be installed beneath the two-foot cap of certified clean fill/top soil.

3.2. Contingency Plan

This Contingency Plan provides protocols to be followed in the event that unanticipated environmental conditions are encountered during site redevelopment. The CHASP provides for health and safety contingencies that should be addressed in the event that unanticipated environmental conditions are recognized.

All construction personnel upon entering the site must attend a brief training meeting. During this meeting, site workers will be instructed to monitor the excavation continuously for presence of buried tanks, drums or other containers, sludges, or soil, which shows evidence of potential contamination, such as discoloration, staining or odors. If any of these are detected, site workers will be instructed to immediately notify the site superintendent. The site superintendent will halt the excavation in the area of the suspected environmental hazard, and the site superintendent will notify the following:

Project Coordinator (Project Manager)	Peter J. Monte/ Toll Brothers, Inc.
Office	(718) 852-5595
Cell	(347) 907-1460
Environmental Consultant	Mimi Raygorodetsky / ELM, LLC
Office	(212) 962-4301
Cell	(917) 952-9906

The affected area will be cordoned off and no further work will be performed at that location until the appropriate contingency response plan described below is implemented.

3.2.1. *Storage Tank Contingency Plan*

If encountered, underground storage tanks and/or aboveground storage tanks (USTs and ASTs), including dispensers, piping, and fill ports, will be properly removed in accordance with applicable NYS DEC regulations.

3.2.2. *Drum/Container Contingency Plan*

If drums or other containers are encountered, the area will be cordoned off and the following steps will be followed:

- If there is evidence of a petroleum spill, the NYS DEC Spill Hotline will be notified within two hours.
- Examine the drum to determine its condition and whether it contains any materials. If the drum is empty, remove and dispose of as scrap.
- If the drum contains any material, sample the contents using procedures appropriate to the condition of the drum. Depending on drum contents, samples may be analyzed for volatile and semivolatile organic compounds, PCBs, metals, reactivity, and flash point following NYS DEC procedures.
- Move the drum using appropriate precautions to a secure location with secondary containment.
- Dispose of drum in accordance with applicable regulations.

3.3. *Dewatering*

No dewatering is anticipated during the Project. However, if dewatering will be necessary, a dewatering permit will be obtained from the NYC DEP prior to any dewatering activity.

3.4. Site-Specific Construction Health and Safety Plan

All activities covered by this RAP must be conducted in compliance with the Construction Health and Safety Plan (CHASP) prepared by ELM and included in Appendix E. The CHASP includes protocols for monitoring the air in and outside of excavation areas.

3.5. Dust Control

To prevent the potential off-site transport of dust, dust suppression measures will be implemented during earth-disturbing operations. The following measures may be utilized on-site, as necessary:

- Water will be available on-site for spraying soil to suppress dust in dry weather;
- Any temporarily stockpiled soil will be covered with poly sheeting;
- All haul trucks will have tarp covers; and
- Gravel pads will be placed at access points to prevent tracking dust off-site.

If visible observation detects elevated levels of dust, monitoring using a particulate monitor (Miniram or equivalent) should be conducted. If monitoring detects concentrations greater than 1.0 mg/m^3 over daily background, corrective actions should be taken as defined herein, including the use of water for dust suppression and if this is not effective, requiring workers to wear APRs with efficiency particulate air (HEPA) cartridges.

NYS DEC's TAGM No. 4031, Fugitive Dust Suppression and Particulate Monitoring Program at Inactive Hazardous Waste Sites (Appendix D), would be used on-site in the event that hazardous materials are encountered during site redevelopment.

3.6. Document Submissions and Remedial Action Report

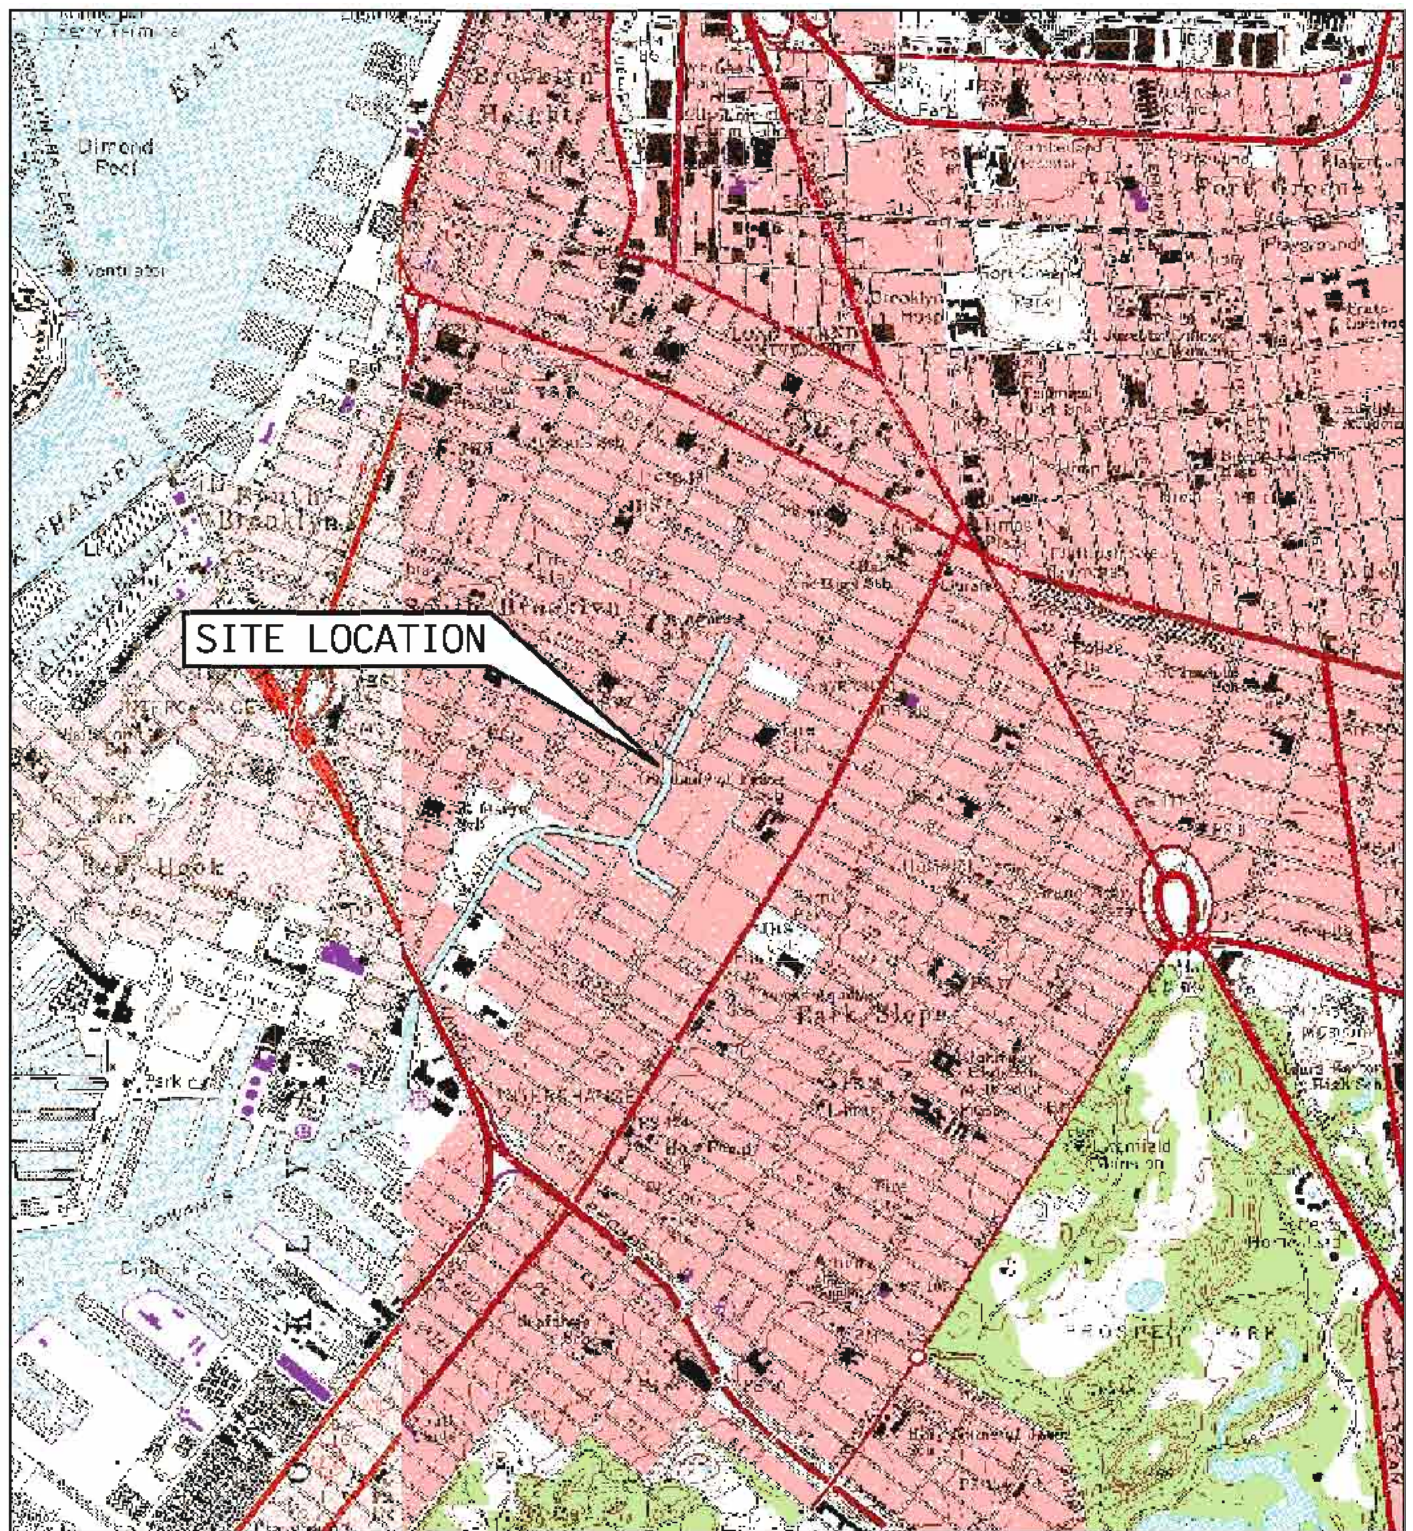

Upon completion of site excavation and the building foundations, a Remedial Action Report (RAR) will be prepared to document the remediation effort presented in this RAP. The report will document the remedial actions outlined above and compliance with the CHASP.

The RAR will include site photographs, waste manifests, and the analytical results/documentation of capping material in exposed areas, as necessary. The RAR will be certified by a Professional Engineer and it will be submitted to NYS DEC.

4.0 COMMENCEMENT NOTIFICATION

Notice will be given to the NYS DEC in writing at least (5) five days prior to commencement of work at the Project Site.

Technical and Administrative Guidance Memorandum #4031

Fugitive Dust Suppression and Particulate Monitoring Program at Inactive Hazardous Waste Sites

More information from this division:

Division of Environmental Remediation
More TAGMs

To: Regional Hazardous Waste Remediation Engrs., Bur.
Directors & Section Chiefs

From: Michael J. O'Toole, Jr., Director, Division of Hazardous
Waste Remediation (signed)

Subject: Technical and Administrative Guidance Memorandum --
Fugitive Dust Suppression and Particulate Monitoring
Program at Inactive Hazardous Waste Sites

Date: Oct 27, 1989

1. Introduction

Fugitive dust suppression, particulate monitoring, and subsequent action levels for such must be used and applied consistently during remedial activities at hazardous waste sites. This guidance provides a basis for developing and implementing a fugitive dust suppression and particulate monitoring program as an element of a hazardous waste site's health and safety program.

2. Background

Fugitive dust is particulate matter--a generic term for a broad class of chemically and physically diverse substances that exist as discrete particles, liquid droplets or solids, over a wide range of sizes--which becomes airborne and contributes to air quality as a nuisance and threat to human health and the environment.

On July 1, 1987, the United States Environmental Protection Agency (USEPA) revised the ambient air quality standard for particulates so as to reflect direct impact on human health by setting the standard for particulate matter less than ten microns in diameter (PM_{10}); this involves fugitive dust whether contaminated or not. Based upon an examination of air quality composition, respiratory tract deposition, and health effects, PM_{10} is considered conservative for the primary standard--that requisite to protect public health with an adequate margin of safety. The primary standards are 150 ug/m^3 over a 24-hour averaging time and 50 ug/m^3 over an annual averaging time. Both of these standards are to be averaged arithmetically.

There exists real-time monitoring equipment available to measure PM_{10} and capable of integrating over a period of six seconds to ten hours. Combined with an adequate fugitive dust suppression program, such equipment will aid in preventing the off-site migration of contaminated soil. It will also protect both on-site personnel from exposure to high levels of dust and the public around the site from any exposure to any dust. While specifically intended for the protection of on-site personnel as well as the public, this program is not meant to replace long-term monitoring which may be required given the contaminants inherent to the site and its air quality.

3. Guidance

A program for suppressing fugitive dust and monitoring particulate matter at hazardous waste sites can be developed without placing an undue burden on remedial activities while still being protective of health and environment. Since the responsibility for implementing this program ultimately will fall on the party performing the work, these procedures must be incorporated into appropriate work plans. The following fugitive dust suppression and particulate monitoring program will be employed at hazardous waste sites during construction and other activities which warrant its use:

1. Reasonable fugitive dust suppression techniques must be employed during all site activities which may generate fugitive dust.
2. Particulate monitoring must be employed during the handling of waste or contaminated soil or when activities on site may generate fugitive dust from exposed waste or contaminated

soil. Such activities shall also include the excavation, grading, or placement of clean fill, and control measures therefore should be considered.

3. Particulate monitoring must be performed using real-time particulate monitors and shall monitor particulate matter less than ten microns (PM_{10}) with the following minimum performance standards:

Object to be measured: Dust, Mists, Aerosols

Size range: <0.1 to 10 microns

Sensitivity: 0.001 mg/m^3

Range: 0.001 to 10 mg/m^3

Overall Accuracy: $\pm 10\%$ as compared to gravimetric analysis of stearic acid or reference dust

Operating Conditions:

Temperature: 0 to 40°C

Humidity: 10 to 99% Relative Humidity

Power: Battery operated with a minimum capacity of eight hours continuous operation

Automatic alarms are suggested.

Particulate levels will be monitored immediately downwind at the working site and integrated over a period not to exceed 15 minutes. Consequently, instrumentation shall require necessary averaging hardware to accomplish this task; the P-5 Digital Dust Indicator as manufactured by MDA Scientific, Inc. or similar is appropriate.

4. In order to ensure the validity of the fugitive dust measurements performed, there must be appropriate Quality Assurance/Quality Control (QA/QC). It is the responsibility of the entity operating the equipment to adequately supplement QA/QC Plans to include the following critical features: periodic instrument calibration, operator training, daily instrument performance (span) checks, and a record keeping plan.
5. The action level will be established at 150 ug/m^3 over the integrated period not to exceed 15 minutes. While conservative, this short-term interval will provide a real-time assessment of on-site air quality to assure both health and safety. If particulate levels are detected in excess of 150 ug/m^3 , the upwind background level must be measured

immediately using the same portable monitor. If the working site particulate measurement is greater than 100 ug/m^3 above the background level, additional dust suppression techniques must be implemented to reduce the generation of fugitive dust and corrective action taken to protect site personnel and reduce the potential for contaminant migration. Corrective measures may include increasing the level of personal protection for on-site personnel and implementing additional dust suppression techniques (see Paragraph 7). Should the action level of 150 ug/m^3 be exceeded, the Division of Air Resources must be notified in writing within five working days; the notification shall include a description of the control measures implemented to prevent further exceedences.

6. It must be recognized that the generation of dust from waste or contaminated soil that migrates off-site, has the potential for transporting contaminants off-site. There may be situations when dust is being generated and leaving the site and the monitoring equipment does not measure PM_{10} at or above the action level. Since this situation has the potential to migrate contaminants off-site, it is unacceptable. While it is not practical to quantify total suspended particulates on a real-time basis, it is appropriate to rely on visual observation. If dust is observed leaving the working site, additional dust suppression techniques must be employed. Activities that have a high dusting potential--such as solidification and treatment involving materials like kiln dust and lime--will require the need for special measures to be considered.
7. The following techniques have been shown to be effective for the controlling of the generation and migration of dust during construction activities:
 1. Applying water on haul roads.
 2. Wetting equipment and excavation faces.
 3. Spraying water on buckets during excavation and dumping.
 4. Hauling materials in properly tarped or watertight containers.
 5. Restricting vehicle speeds to 10 mph.
 6. Covering excavated areas and material after excavation activity ceases.
 7. Reducing the excavation size and/or number of excavations.

Experience has shown that utilizing the above-mentioned dust suppression techniques, within reason as not to create excess water which would result in unacceptable wet

conditions, the chance of exceeding the 150 ug/m³ action level at hazardous waste site remediations is remote. Using atomizing sprays will prevent overly wet conditions, conserve water, and provide an effective means of suppressing the fugitive dust.

8. If the dust suppression techniques being utilized at the site do not lower particulates to an acceptable level (that is, below 150 ug/m³ and no visible dust), work must be suspended until appropriate corrective measures are approved to remedy the situation. Also, the evaluation of weather conditions will be necessary for proper fugitive dust control--when extreme wind conditions make dust control ineffective, as a last resort remedial actions may need to be suspended.

There may be situations that require fugitive dust suppression and particulate monitoring requirements with action levels more stringent than those provided above. Under some circumstances, the contaminant concentration and/or toxicity may require appropriate toxics monitoring to protect site personnel and the public. Additional integrated sampling and chemical analysis of the dust may also be in order. This must be evaluated when a health and safety plan is developed and when appropriate suppression and monitoring requirements are established for protection of health and the environment.

Appendix D: Daily Safety Inspection List

Appendix E: Weekly Safety Inspection List and Weekly Safety Report

Appendix F: Incident Report

1.0 PURPOSE

This Construction Health and Safety Plan (CHASP) assigns responsibilities, establishes personnel protection standards and mandatory safety practices and procedures, and provides for contingencies that may arise during construction at the 363 and 365 Bond Street and 400 Carroll Street property, located in Brooklyn, New York (the Project Site). The purpose of the CHASP is to minimize health and safety risks resulting from potential hazardous or contaminated materials on the site.

All activities covered by this CHASP must be conducted in compliance with this CHASP and with applicable federal, state, and local health and safety regulations. Personnel covered by this CHASP who cannot or will not comply will be excluded from site activities. This plan is not designed to address potential geotechnical, mechanical or structural safety concerns. It is not intended to address the normal hazards of construction work, which are separately covered by OSHA regulations and/or local and state construction codes or regulations.

2.0 APPLICABILITY

Remediation activities that disturb the existing on-site soil or create potential exposure routes to contaminated groundwater on the Project Site are subject to this CHASP. Such activities will occur during site remediation or if contingencies are identified during general construction for the proposed redevelopment. The contractors and their subcontractors involved in the construction project shall provide a copy of this CHASP for their employees whose work involves any potential exposure to on-site chemical hazards in the soils, and shall complete all work in accordance with this CHASP.

3.0 SITE DESCRIPTION

3.1. General Information

The legal definition of the Site is Tax Block 452, Lots 1 and 15 and Tax Block 458, Lot 1. The Site is located on two adjoining blocks, bounded by Carroll Street to the north, the Gowanus Canal to the east, 2nd Street to the south and Bond Street to the west. Currently, the Site is occupied by warehouses, open vehicle storage, and vacant land and buildings.

3.2. Proposed Site Redevelopment

The proposed project will redevelop the Project Site with predominantly residential buildings that would include market-rate and affordable housing with community facility and commercial space and accessory parking. In addition, the proposed project will provide approximately 0.7 acres of publicly-accessible waterfront open space on the Gowanus Canal along the entire project waterfront from 2nd Street on the south to Carroll Street on the north.

4.0 CONSTRUCTION HEALTH AND SAFETY PLAN

4.1. Hazard Potential

Between 2004 and 2005, ELM evaluated environmental conditions on the Project Site by conducting a Phase I Environmental Site Assessment (ESA) and three Phase II Environmental Site Investigations (ESIs) [one performed on each of the three tax lots that comprise the Project Site]. These investigations are summarized in the November 21, 2008 Remedial Investigation Report (RIR) prepared by ELM. Please see Appendix A for a CD containing these previous studies.

4.1.1. Soil Findings

With regard to site soils, in general, evidence of weathered petroleum (stained soil or soil exhibiting petroleum-like odors) and urban fill (presence of miscellaneous fill materials [ash, ceramic, brick, etc.] in soils) were ubiquitous above a confining clay layer and across all three parcels that comprise the Project Site. Laboratory analytical results support these conclusions in that very few primary petroleum constituents (benzene, toluene, ethylbenzene and/or toluene - BTEX) were detected in soil samples above regulatory criteria and several SVOCs (primarily polycyclic aromatic hydrocarbons – PAHs) and metals were detected above regulatory criteria.

In addition to these findings, one or more “hot spots” were identified on each of the three parcels. For the purpose of this report, a hot spot is defined as:

1. A soil boring location where petroleum-saturated soils were observed in any soil interval or a monitoring well where free product was gauged on the water table;
2. A soil boring location where primary petroleum constituents (BTEX) were detected above regulatory criteria; and/or

3. A soil boring location where SVOCs were detected at concentrations above regulatory criteria at concentrations that indicate that their presence is not due to urban fill alone (generally, boring locations where total SVOCs were detected above 100 ppm).

A parcel by parcel discussion of identified hot spots is presented in Sections 4.1.1.1 through 4.1.1.3. Please refer to Figures 3 through 8 in the RAP for the locations of monitoring wells and soil borings discussed in these Sections.

It should be noted that the site geology includes an approximately 10- to 17-foot thick layer of fill underlain by a layer of clay, which appears to act as a barrier, restricting vertical migration of contaminants.

4.1.1.1. Hot Spots Identified on 363 Bond Street

Based on field observations and laboratory results, the following hot spots were identified on 363 Bond Street:

- Soil was noted to be saturated with product in two on-site boring locations, MW-5 and SB-1, and free product was encountered in one on-site monitoring well, MW-5. Additionally, free product was encountered in off-site monitoring well MW-3, which is located on 1st Street, adjacent to the southwest corner of 363 Bond Street.
- BTEX were noted in soil collected from five boring locations at concentrations exceeding applicable regulatory criteria: SM-3, MW-5, SB-1, SB-3 and SB-4.
- SVOCs were detected in soil at total concentrations above 100 ppm in six boring locations: MW-2, MW-5, SB-1, SB-3, SB-4 and SB-5. The total SVOC concentrations in SB-1 (991 ppm) and MW-5 (6,400 ppm) exceed the TAGM for total SVOCs of 500 ppm; soils from the remaining borings were detected below the TAGM total of 500 PPM.

In addition to these hot spots, pesticides were detected in soil slightly above applicable regulatory criteria in two boring locations: MW-2 and MW-5. The pesticide dieldrin was detected at a concentration of 53 ppb in soil boring MW-2, slightly above the TAGM 4046 RSCO of 44 ppb. Heptachlor epoxide was detected at concentrations of 450 ppb and 32 ppb in soil samples from boring MW-5, above the TAGM 4046 RSCO of 20 ppb.

No PCBs were detected in any soil samples above regulatory criteria. The metals detected in soil samples were consistent with those expected in urban fill materials.

Please see Figure 3 in the RAP for a pictorial depiction of hot spot locations.

4.1.1.2. Hot Spots Identified on 365 Bond Street

Based on field observations and laboratory results, the following hot spots were identified on 365 Bond Street:

- BTEX were detected above applicable regulatory criteria in two sample locations: B-3 and B-5.
- SVOCs were detected in soil at total concentrations above 100 ppm in one boring location: MW-1. The total concentration in MW-1, 172.7 ppm, does not exceed the TAGM for total SVOCs of 500 ppm.

No petroleum-saturated soils were observed in any soil interval in any soil boring and no free product was gauged in any monitoring well. No PCBs or pesticides were detected in soil above applicable regulatory criteria in any soil samples. The metals detected in soil samples were consistent with those expected in urban fill materials.

Please see Figure 4 in the RAP for a pictorial depiction of hot spot locations.

4.1.1.3. Hot Spots Identified on 400 Carroll Street

Based on field observations and laboratory results, the following hot spots were identified on 400 Carroll Street:

- BTEX were detected above applicable regulatory criteria in six sample locations: SB-1, SB-3, SB-4, SB-8, TP-5 and TP-6.
- SVOCs were detected in soil at total concentrations above 100 ppm in one boring location: SB-11. The total concentration in SB-11, 107.3 ppm, does not exceed the TAGM for total SVOCs of 500 ppm.

No petroleum-saturated soils were observed in any soil interval in any soil boring and no free product was gauged in any monitoring well. No PCBs or pesticides were detected in soil above

applicable regulatory criteria in any soil samples. The metals detected in soil samples were consistent with those expected in urban fill materials.

Please see Figure 5 in the RAP for a pictorial depiction of hot spot locations.

4.1.2. Groundwater Findings

Considering the long industrial and manufacturing history of the site, groundwater did not appear to be significantly impacted by previous site activities. Free-phase petroleum product was observed in soil boring SB-1 and monitoring well MW-5 on the 363 Bond Street parcel. Limited evidence of petroleum contamination in groundwater (BTEX detected above NYSDEC Technical and Operational Guidance Series [TOGS] Class GA Standards and Guidance Values) was noted in monitoring wells MW-4 and MW-5 on 363 Bond Street; and monitoring well MW-1 and temporary well points (collocated with soil borings) SB-2, SB-3, SB-6 and SB-11 on 400 Carroll Street. SVOCs were detected above Class GA standards in temporary well points (collocated with soil borings) SB-7 and SB-11 on 363 Bond Street; and soil borings SB-7 and SB-11 on 400 Carroll Street.

The VOC and SVOC impacts to groundwater appear to be limited to the 363 Bond Street and 400 Carroll Street parcels. Additionally, VOCs and SVOCs were detected above applicable regulatory criteria in one off-site well (PZ) located upgradient and off-site of 365 Bond Street, suggesting that the source of this contamination was located off-site.

Pesticides were detected in monitoring wells MW-4 and MW-5 on 363 Bond Street above Class GA Standards and Guidance Values. Total PCBs were detected at a concentration above the Class GA Standard of 0.1 microgram per liter ($\mu\text{g/L}$) in one groundwater sample, SB-7/TW, collected from a temporary well point collocated with soil boring SB-7 on 400 Carroll Street, where the total detected concentration for PCBs was 0.11J $\mu\text{g/L}$. The "J" flag indicates that the concentration of a compound was detected below the reporting limit and was, therefore, estimated.

Additionally, various earth metals commonly seen in groundwater (i.e. iron, manganese, magnesium, and sodium) were detected in groundwater monitoring wells throughout the Project Site at concentrations above Class GA Standards. The presence of magnesium and sodium

are likely explained by the fact that the Gowanus Canal is a tidally influenced saline water body and likely has a hydraulic connection with the site groundwater.

Please see Figures 6 through 8 in the RAP for a pictorial summary of groundwater results.

4.2. Hazard Evaluation

The most likely routes of exposure are breathing of volatile and semi-volatile chemicals or particulate-laden air released during soil disturbance activities or dermal contact with soil (it is not anticipated that groundwater will be encountered during site redevelopment). For specific health effects from potential on-site contaminants please see Appendix A.

The potential adverse health effects from contaminants known to be present on-site are diverse. Many of these compounds are known or suspected to result in chronic illness from long-term exposures. However, due to the limited nature of the proposed construction, acute effects are more of a concern. Typical symptoms of acute exposure to volatile and semi-volatile chemicals are headaches, lung irritation, dizziness, poor coordination and difficulty concentrating. Skin contact with certain contaminants for short periods may cause skin rashes.

4.3. Site Safety - Key ELM Personnel

The following key staff will implement the health and safety plan once remediation begins. All staff are full-time employees at Environmental Liability Management, LLC (ELM). The Project Manager will be Mimi Raygorodetsky, with the alternate being Basil Borisov. The appointed on-site staff person who will act as the Site Safety Officer (SSO) is Nicole Gorelick, with the alternate being Scott Narod. ELM employees can be reached by telephone at 212-962-4301, and at the phone numbers listed below.

Project Manager	Mimi Raygorodetsky	Cell: (917) 952-9906
Alternate Project Manager	Basil Borisov	Cell: (646) 895-2943
Site Safety Officer (SSO)	Nicole Gorelick	Cell: (917) 733-6848
Alternate SSO	Scott Narod	Cell: (646) 823-6931

The SSO will implement the requirements of this CHASP once remediation activities begin. The SSO has the authority to immediately correct all situations where noncompliance with this

CHASP is observed and to stop work when an immediate danger is present. All personnel covered under this CHASP should cooperate with the SSO in order to:

- Assure that personnel covered by this CHASP have submitted a completed copy of the CHASP acknowledgement form.
- Assure that personnel covered by this CHASP have attended a site safety and health meeting before entering the work areas.
- Monitor the safety performance of personnel in the work areas to ensure that provisions of this CHASP are being followed.
- Conduct the safety and health meeting prior to commencement of work.

If contaminated (non hazardous) materials are encountered as described in the contingency plan in Section 5.0, all site workers with the potential to be exposed to these materials, including the SSO, will have completed a 24-hour Occasional Site Worker training course that meets OSHA requirements of 29 CFR, Part 1910.120 (e), Occupational Safety and Health Standards, plus any additionally required 8-hr annual refresher courses.

4.4. Training

Those who enter the work area while intrusive activities are being performed are responsible for following the health and safety procedures specified in this CHASP and for performing their work in a safe and responsible manner. Construction personnel upon entering the site for the first time must attend a brief training meeting, its purpose being to:

- Make workers aware of the potential hazards they may encounter;
- Provide the knowledge and skills necessary for them to perform the work with minimal risk to health and safety;
- Make workers aware of the purpose and limitations of safety equipment; and
- Ensure that they can safely avoid or escape from emergencies.

Each member of the construction crew shall be instructed in these objectives before he/she goes onto the site. The SSO or other suitably trained individuals shall conduct the training

program. Each person must read the CHASP in its entirety prior to the start of on-site work and submit a completed CHASP Acknowledgement Form to the SSO prior to the start of work.

4.5. General Site Hazards

4.5.1. Operation of Heavy Equipment

The use of heavy equipment is anticipated for this project, and Occupational Safety and Health Administration (OSHA) guidelines will be followed for operating heavy equipment as outlined in 29 CFR 1926.602.

4.5.2. Excavation and Earthwork

Soil excavation will be conducted as part of this project. The OSHA 29 CFR 1926.651 (February 20, 1990) construction industry standards relating to excavation work will be followed during all excavation activities. These standards include shoring and cutback requirements, equipment specifications, entry requirements, etc. To avoid exposure to site-specific contaminants and to ensure acceptable atmospheric conditions, the following additional requirements apply for excavation work at the site:

- Open excavations should be backfilled as soon as practicable. While excavations remain open, appropriate warnings should be posted and barricades will be erected to protect pedestrian and worker safety. Where possible, excavation side walls should be cut at a gradual slope to maximize egress and access. Workers should not enter excavations unless absolutely required.
- To ensure atmospheric quality, tests shall be conducted as often as necessary as determined by the site safety officer. This includes tests for flammable gas and oxygen deficiency.
- When the site safety officer identifies hazardous atmospheres, emergency rescue equipment and PPE should be on the work site (Level C PPE) and readily accessible to employees (29 CFR 1926.651(g)(2)(I)).
- Daily site safety inspections shall be conducted by the SSO.

4.5.3. *Work in Extreme Temperatures*

Work under extremely hot or cold weather conditions requires special protocols to minimize the chance that employees will be affected by heat or cold stress. OSHA guidelines will be followed regarding work in excessive hot or cold temperatures.

4.5.4. *Miscellaneous*

Applicable OSHA 29 CFR 1910.120(m) standards for illumination shall apply. Work should be conducted during daylight hours whenever possible.

Electrical power should be provided through a ground fault circuit interrupter. Equipment that will enter an excavation must be suitable and approved (i.e. intrinsically safe) for use in potentially explosive environments. Applicable OSHA 29 CFR 1926 Subpart K standards for use of electricity shall apply.

Work where there is a fall hazard should be performed using appropriate ladders and/or protection (e.g. body harness and lifeline). All work should be conducted at the ground surface or in trench excavations.

In accordance with 29 CFR 1910.151(c), workers involved in operations where there is the risk of eye injury, (chemical splash, etc.), should have ready access to an approved eye wash unit. Protective eye wear shall be donned in Level D, when directed by the site safety officer. (The full-face APR required by Level C and the pressure demand self-contained breathing apparatus mask required by Level B provide eye protection.)

Operations where there is a potential for fire should be conducted in a manner that minimizes risk. Non-sparking tools and fire extinguishers shall be used or available as directed by the site safety officer when work is in potentially explosive atmospheres. Ignition sources shall be removed from work areas. Explosion-proof instruments and/or bonding and grounding should be used to prevent fire or explosion when the site safety officer directs their use.

Overhead and underground utilities should be identified and/or inspected and appropriate safety precautions taken before conducting operations where there is potential for contact or interference.

4.6. Dust Control and Monitoring During Earthwork

Dust generated during excavation activities or other earthwork should be controlled by wetting the working surface with water, as necessary. Calcium chloride may be used if the problem cannot be controlled with water. The primary sources of dust will be equipment, vehicular traffic, and construction activities. If visible observation detects elevated levels of dust, monitoring using a particulate monitor (Miniram or equivalent) should be conducted. If monitoring detects concentrations greater than 1.0 mg/m^3 over daily background, corrective actions should be taken as defined herein, including the use of water for dust suppression and if this is not effective, requiring workers to wear APRs with efficiency particulate air (HEPA) cartridges.

4.7. Emergency Response

In the case of a medical emergency, the HSO will determine the nature of the emergency and he/she should call for an ambulance, if needed. If the nature of the injury is not serious – i.e., the person can be moved without expert emergency medical personnel – he/she should be driven to a hospital by on-site personnel. There should be an on-site field phone. The field crew should be equipped with emergency equipment, such as a first aid kit and disposable eye washes.

The location of the nearest hospital, shown on Figure 1 (on the following page), is the New York Methodist Hospital. The hospital is located at 506 6th Street, Brooklyn, NY. To reach New York Methodist Hospital:

- Head southeast on Carroll Street toward Nevins Street - go 0.4 miles
- Turn right at 4th Avenue - go 0.4 miles
- Turn left at 7th Street - go 0.6 miles
- Turn left at 8th Avenue - go 259 feet
- Turn left at 6th Street – go 0.1 miles and arrive at New York Methodist Hospital

5.0 HEALTH AND SAFETY PROCEDURES CONTINGENCY PLAN

This section provides health and safety procedures that should be followed in the event that unanticipated environmental conditions are encountered during construction.

5.1. Site Work Zones for Contaminated Areas

During any activities involving disturbance of contaminated areas, the work area should be divided into various zones to prevent the spread of contamination, ensure that proper protective equipment is donned, and provide an area for decontamination. The Exclusion Zone (EZ) is defined as the area where potentially contaminated materials located. The Contamination Reduction Zone (CRZ) is the area where decontamination procedures take place and is located next to the EZ. The Support Zone is the zone area where support-facilities-such as vehicles, a field phone, fire extinguisher, and first aid supplies-are located. The emergency staging area (part of the Support Zone) is the area where workers on-site would assemble in the event of an emergency. These zones shall be designated daily, depending on that day's activities. Field personnel shall be informed of the location of these zones before work begins.

Control measures such as "Caution" tape and traffic cones should be placed around the perimeter of the work area when work is being done in the areas of concern to prevent entrance onto the area with exposed soil.

5.2. Worker Exposure Prevention Procedures

Under this contingency plan, contamination prevention shall focus on minimizing worker exposure. Procedures for contamination avoidance should include: avoiding walking through areas of obvious or known contamination; no direct handling of contaminated materials; assure that Personal Protective Equipment (PPE) is in good condition and openings taped if necessary; staying upwind of airborne contaminants; and no carrying of cigarettes, gum, etc into areas designated as contaminated.

Care should be taken to limit the amount of contamination that comes in contact with heavy equipment (e.g., tires, tracks, undercarriages). If contaminated tools are to be placed on non-contaminated equipment for transport to a decontamination area, plastic should be used to keep the equipment clean. Dust control measures should be used on roads inside the Site boundaries if necessary.

All equipment and personnel shall pass through an outlined decontamination procedure upon exiting the EZ and entering the CRZ, as detailed in Section 5.10.

5.3. Training Requirements

Personnel entering the exclusion zone or decontamination zone should meet the training requirements for hazardous waste site operations and emergency response operations in accordance with OSHA 29 CFR 1910.120(e). Each subcontractor and supplier working on the job should provide the SSO with training documentation for its personnel. The site safety officer may require modifications to the subcontractor or suppliers safety training documentation if it does not conform to site-specific requirements.

5.4. Medical Monitoring Requirements

Personnel and visitors entering the exclusion zone or decontamination zone shall have completed appropriate medical monitoring required under OSHA 29 CFR 1910.120(f). Medical monitoring enables a physician to monitor each employee's health, physical condition, and his fitness to wear respiratory protective equipment and carry out on-site tasks.

Evidence of compliance with additional medical monitoring requirements for this site should also be included. Subcontractors and suppliers working on the job must provide the site safety officer with documentation on their medical monitoring programs. Medical monitoring is the responsibility of each subcontractor.

5.5. Fit Testing Requirements

Personnel and visitors entering the exclusion zone or decontamination zone using a negative pressure air purifying respirator (APR) shall have successfully passed a qualitative respirator fit test in accordance with OSHA 29 CFR 1910.134 or the American National Standards Institute (ANSI). Fit testing documentation is the responsibility of each subcontractor.

5.6. Personal Protective Equipment

PPE shall be selected in accordance with the site air monitoring program, OSHA 29 CFR 1910.120(c), (g), and 1910.132. Protective equipment shall be NIOSH-approved and respiratory protection shall conform to OSHA 29 CFR Part 1910.133 and 1910.134 specifications; head protection shall conform to 1910.135; eye and face protection shall conform

to 1910.133; and foot protection shall conform to 1910.136. The only true difference among the levels of protection from D thru B is the addition of the type of respiratory protection.

The required level of PPE is activity-specific and is based on air monitoring results (Section 5.6) and properties of identified or expected contaminants. Facing equipment away from the wind and placing site personnel upwind of excavations will allow workers engaged in excavation activities to remain in Level D. All other site work shall be conducted in Level D, with the possibility of upgrade to Level C as directed by the SSO.

5.6.1. *Level D*

Level D PPE shall be donned when the atmosphere contains no known hazards and work functions preclude splashes, immersion, or the potential for inhalation of, or contact with, hazardous concentrations of harmful chemicals. Level D PPE consists of:

- Standard work uniform, coveralls, or tyvek, as needed;
- Steel toe and steel shank work boots;
- Hard hat;
- Gloves, as needed;
- Safety glasses;
- Hearing protection;
- Equipment replacements are available as needed.

5.6.2. *Level C*

Level C PPE shall be donned when the concentrations of measured total organic vapors in the breathing zone exceed background concentrations (using a portable OVA, or equivalent). The specifications on the APR filters used must be appropriate for contaminants identified or expected to be encountered. Level C PPE shall be donned when the identified contaminants have adequate warning properties and criteria for using APR have been met. Level C PPE consists of:

- Chemical resistant or coated tyvek coveralls;
- Steel-toe and steel-shank workboots;
- Chemical resistant overboots or disposable boot covers;
- Disposable inner gloves (surgical gloves);
- Disposable outer gloves;
- Full-face APR fitted with organic vapor/dust and mist filters or filters appropriate for the identified or expected contaminants;
- Hard hat;
- Splash shield, as needed; and,
- Ankles/wrists taped with duct tape.

The SSO will verify if Level C is appropriate by checking organic vapor concentrations using compound and/or class-specific detector tubes.

5.7. Air Monitoring in Contaminated Areas

The purpose of the air monitoring program is to avoid or minimize exposure of the field personnel and the public to potential environmental hazards in the soil and/or groundwater during remediation. Results of the air monitoring will be used to determine the appropriate response action, if needed.

29 CFR 1910.120(h) specifies that monitoring shall be performed where there may be a question of employee exposure to hazardous concentrations of hazardous substances in order to assure proper selection of engineering controls, work practices and personal protective equipment so that employees are not exposed to levels which exceed permissible exposure limits, or published exposure levels if there are no permissible exposure limits, for hazardous substances.

5.8. Air Monitoring Instruments

The air monitoring instruments to be used on site during remediation may include:

- Photoionization Detector (PID) with 10.6 EV probe for use during all intrusive activities
- Detector Tubes- for measuring benzene concentrations
- Dust Monitor: MIE DataRAM or equivalent for use during test pit excavation
- Combustible Gas Indicator (CGI)/Oxygen/Hydrogen Sulfide/Carbon Monoxide Meter

5.8.1. Organic Vapor Monitoring

Monitoring for organic vapors should be conducted in the breathing zone of employees using a PID during remedial activities in contaminated areas. If sustained total organic vapors are measured in the breathing zone above 1 ppm, a benzene colorimetric tube should be used in the breathing zone. See Table 1 for total volatile organic vapor and benzene action levels.

5.8.2. Particulate Monitoring

Real time monitoring for airborne dust should be performed during excavation when visible levels of dust are observed. The instrument to be used is the MIE Inc. DataRAM with a latching alarm. The instrument will be fitted with an omnidirectional sampling inlet to get representative samples under a variety of wind speeds and directions. A RAM-TCH inlet heater should also be used in humid conditions to remove water vapor from the sampling stream.

The dust monitor should be set up downwind of the excavation activities to verify that dust control methods are adequate. The latching alarm will be set at 1.0 mg/m³ to alert site personnel that the action level has been exceeded. When the alarm is activated, the work area will be wetted to control dust. Should dust control measures fail to reduce total dust concentrations below 100 ug/m³, Level C protection will be donned by all personnel in the work area and areas downwind will be monitored. Readings above 2.5 mg/m³ in the breathing zone or at the downwind perimeter of the work area will result in the cessation of the dust generating activities. See Table 2 particulate action levels.

5.8.3. Combustible Gas Monitoring

Continuous air monitoring with a CGI/Oxygen/Hydrogen Sulfide/CO meter should be conducted in areas where flammable vapors or gases are suspected. All work activities should stop where the monitor indicates the concentration of flammable vapors exceeds 10 percent of the lower

flammable limit (LEL) at a location with a potential ignition source. The area should be ventilated to reduce the concentration to below 10 percent of the LEL.

Continuous carbon monoxide monitoring should be done if internal combustion engines are operating inside buildings or other enclosed spaces.

5.9. Calibration and Record Keeping

Equipment used should be calibrated in accordance with the manufacturers' specifications. The PID, DataRAM and CGI should be calibration checked before and after use under approximately the same conditions at which the instrument will be used. Calibration information should be kept in the field notebook or instrument log. The date, time, location, instrument serial number, calibration gas and concentration, should be noted.

Volatile organic vapors, oxygen and flammable vapor monitoring data should be recorded in the field notebook or in separate data log books. The following data should be recorded in addition to air monitoring readings:

- Background level and location reading was taken
- Weather conditions
- Wind Speed and direction
- Estimated air temperature and relative humidity
- Field activities
- Location of reading

DataRAM measurements should be recorded on the instrument data logger and downloaded daily. Data should be cleared from the data logger before the next day's use. The readings should be recorded every 10 minutes as well as complete sampling time integrated averages. The field notebook or other suitable log book should be used to describe the location of the DataRAM relative to the dust generating activities. A copy of this description should be attached to the printout of the DataRAM data.

Table 1: Volatile Organic Compound Action Levels

ACTION LEVEL	RESPONSE ACTION
0 - 1parts per million (ppm) above background	Continue work in Level D: Requires coveralls and steel toed boots As applicable: Chemical resistant gloves, chemical resistant boot covers, safety glasses, face shield, or escape mask
>1 ppm above background	Screen for benzene with detector tube
≥ 1 ppm of benzene	Upgrade to Level C protection
>1 - 10 ppm above background	Normal operations if benzene action level is not exceeded. Requires full face or half face respirator, hooded chemical resistant two piece Tyvek suit or overalls, chemical resistant inner and outer gloves, chemical resistant boot covers, steel toe and shank boots As applicable: face shield, or escape mask
10 - 50 ppm above background	Upgrade to Level C protection if benzene action level is not exceeded: Requires full face or half face respirator, hooded chemical resistant two piece Tyvek suite or overalls, chemical resistant inner and outer gloves, chemical resistant boot covers, steel toe and shank boots As applicable: face shield, or escape mask
>50 ppm above background	Stop work and investigate cause of reading. Resume work when source of vapors is abated and readings are less than 50 ppm above background.

Table 2: Particulate Action Levels

ACTION LEVEL	RESPONSE ACTION
0 to 1.0 mg/m3 above background	Continue work in Level D: Requires coveralls and steel toed boots As applicable: Chemical resistant gloves, chemical resistant boot covers, safety glasses, face shield, or escape mask
>1.0 mg/m3 above background	Control dust by wetting area, upgrade to Level C if levels don't go down after 15 minutes, monitor downwind
>2.5 mg/m3 above background	Stop work, evaluate dust control measures

5.10. Decontamination Procedures

Equipment and PPE exiting the exclusion zone should be decontaminated or properly discarded upon exit. Personnel should enter and exit the exclusion zone through the decontamination area. The exclusion and decontamination zones may change depending on the nature of the site work. Plastic bags containing personal protective clothing and equipment should be placed in designated receptacles.

Boots and other potentially contaminated garments that have come in contact with hazardous materials should be cleaned in wash tubs with detergent/water solution and rinsed with water and should remain on site. The wash water, rinse water, and residues should be collected and properly stored until sampling results are received and the final method of disposal can be determined. Disposable PPE, including spent respirator cartridges and canisters, should be properly bagged and disposed of. Contaminated boots, clothing, and equipment (e.g. leather boots, equipment carrying straps) that cannot be decontaminated should be disposed of with the disposable garments or left on site in the decontamination trailer.

The minimum measures for Level B doffing and decontamination are:

- Deposit equipment on plastic drop cloths;
- Scrub outer boots and gloves with a water and detergent solution and rinse;
- Remove outer boots and outer gloves. Discard disposable outer garments in receptacle provided;
- Remove SCBA and face piece and place on rack provided;
- Remove tyvek/outer garment and place in receptacle provided;
- Remove inner gloves and deposit in receptacle provided; and
- Shower/wash face and hands.

The minimum measures for Level C doffing and decontamination are:

- Deposit equipment on plastic drop cloths;
- Scrub outer boots and gloves (if worn) with a water and detergent solution and rinse;
- Remove outer boots and outer gloves. Discard disposable outer garments in receptacle provided;

- Remove tyvek/outer garment and place in receptacle provided;
- Remove first pair of inner gloves;
- Remove respirator (using "clean" inner gloves) and place on rack provided;
- Remove last pair of inner gloves and deposit in receptacle provided; and,
- Shower/wash face and hands.

The second to last item to be removed is the APR, and the last item to be removed is the last of several pairs of surgical gloves. Wearing several pairs of inner gloves permits layers to be removed as needed during various stages of the doffing procedure, and if the APR inadvertently becomes contaminated, inner gloves guard against bare hands contacting the APR.

All potentially contaminated equipment used at the Site should be decontaminated to prevent contaminants from leaving the Site. Equipment that comes into contact with site contaminants should be decontaminated according to manufacturer specifications. Rented equipment is photographed after decontamination. Decontamination is done in the exclusion or decontamination zones.

Heavy equipment should be decontaminated at a decontamination pad and inspected by the SSO and or designated individual before it leaves the Site. Equipment should be dry decontaminated in the EZ first. This shall consist of the gross removal of the contaminated material from the buckets, wheels, blades or buckets using hand tools. If wet decontamination is required, the equipment should be taken to the designated decontamination pad for appropriate water spray removal of remaining contaminated materials. Personnel performing the decontamination of equipment should use the prescribed level of protection. Special consideration should be given to wind speed and direction. Downwind areas are to be kept free of personnel to avoid unnecessary exposure to potential airborne contamination.

The decontamination area should provide for the containment of all wastewater from the decontamination process. PPE that comes in contact with contaminated materials should pass through a field wash on the decontamination pad and final decontamination at the end of the day. All decontamination rinse water should be appropriately collected and managed.

5.11. Confined Space

OSHA published a Final Rule on permit-required confined spaces on January 14, 1993, for General Industry at 29 CFR 1910.146 et seq., with an implementation date of April 15, 1993. The rule specifically excludes agriculture, construction, or shipyard employment. Confined space entry and work within confined spaces is not anticipated under the proposed scope of work and is not covered under this CHASP. If confined space entry happens to occur during general construction activities, the OSHA Final Rule will apply.

5.12. General Field Safety and Standard Operating Procedures

Hazards should be controlled at site areas by limiting entrance to exclusion zones to essential personnel and by implementing the following rules:

- Non-essential (as judged by the site safety officer) personnel and unauthorized persons shall not enter the exclusion or decontamination zone.
- Before entering the exclusion or decontamination zones, all personnel should be familiar with emergency response procedures, site safety locations, first aid and communication equipment, and the location of the map to the hospital and the list of emergency telephone numbers.
- The buddy system should be used at all times by field personnel in the exclusion zone; no one is to perform work within the exclusion zone alone. When in Level D or C, visual contact or radio contact should be maintained at all times. In Level B, visual contact should be maintained at all times, and radio contact should be maintained with the decontamination and/or support zone.
- Contact with contaminated and potentially contaminated surfaces should be avoided. Walk around (not through) puddles and discolored surfaces. Do not kneel on the ground or place equipment on the ground. Protect equipment from contamination.
- All personnel exiting the exclusion zone should exercise the decontamination procedures described in this HASP.
- Beards or other facial hair that interferes with respirator fit will preclude admission to the exclusion zone. Contact lenses should not be worn in the exclusion or decontamination

zones, or if the worker may be expected to enter these zones under routine or emergency situations.

- Eating, drinking, or smoking is permitted only in designated areas in the support zone.
- Each worker should be supplied with and maintain his/her own personal protective equipment.

Note: Every site worker is responsible for complying with this CHASP. Any site worker that fails to adhere to these policies shall be removed from the Project Site. It is the ultimate responsibility of the contractor to ensure that all his/her employees adhere to the policies of this CHASP.

6.0 ACKNOWLEDGEMENT OF THE CHASP

This affidavit must be signed by all workers who enter the site. A copy of the CHASP should be on-site at all times and will be kept by the SSO.

AFFIDAVIT

I, (name) _____ of _____ (company name) have read the Construction Health and Safety Plan (CHASP) for the Toll Gowanus, LLC site (363 and 365 Bond Street and 400 Carroll Street, Brooklyn, New York).

I agree to conduct all on-site work in accordance with the requirements set forth in this CHASP and understand that failure to comply with this CHASP could lead to my removal from the site.

Product Data Sheet

GSE HD Geomembranes

GSE HD is a smooth, high quality, high density polyethylene (HDPE) geomembrane produced from specially formulated, virgin polyethylene resin. This polyethylene resin is designed specifically for flexible geomembrane applications. It contains approximately 97.5% polyethylene, 2.5% carbon black and trace amounts of antioxidants and heat stabilizers; no other additives, fillers or extenders are used. GSE HD has outstanding chemical resistance, mechanical properties, environmental stress crack resistance, dimensional stability and thermal aging characteristics. GSE HD has excellent resistance to UV radiation and is suitable for exposed conditions. *These product specifications meet or exceed GRI GM13.*

Chemical Resistance For GSE Geomembranes

GSE geomembranes are made of high quality, virgin polyethylene which demonstrates excellent chemical resistance. GSE polyethylene geomembranes are resistant to a great number and combinations of chemicals. It is this property of (HDPE) high density polyethylene geomembranes that makes it the lining material of choice.

In order to gauge the durability of a material in contact with a chemical mixture, testing is required in which the material is exposed to the chemical environment in question. Chemical resistance testing is a very large and complex topic because of two factors. First, the number of specific media is virtually endless and second, there are many criteria such as tensile strength, hardness, etc. that may be used to assess a material's resistance to degradation.

The chemical resistance of polyethylene has been investigated by many people over the past few decades. We are able to draw from that work when making statements about the chemical resistance of today's polyethylene geomembranes. In addition to that, many tests have been performed that specifically use geomembranes and certain chemical mixtures. Naturally, however, every mixture of chemicals cannot be tested for. As a result of these factors, GSE published a chemical resistance chart, demonstrating general guidelines.

Polyethylene is, for practical purposes, considered impermeable. Be aware, however, that all materials are permeable to some extent. Permeability varies with concentration, temperature, pressure and type of permeant. The rates of permeation are usually so low, however, that they are insignificant. As a point of reference, polyethylene is commonly used for packaging of several types of materials. These include gasoline, motor oil, household cleaners (i.e. bleach), muratic acid, pesticides, insecticides, fungi-

cides, and other highly concentrated chemicals. Also, you should be aware that there are some chemicals which may be absorbed by the material but only when present at very high concentrations. These include halogenated and/or aromatic hydrocarbons at greater than 50%; their absorption results in swelling and slight changes in physical properties such as increased tensile elongations. This includes many types of fuels and oils. Recognize that this action, however, does not affect the liner's ability to act as a barrier for the material it is containing.

Since polyethylene is a petroleum product, it can absorb other petroleum products. Like a sponge, the material becomes slightly thicker and more flexible but does not produce a hole or void. However, unlike a sponge, this absorption is not immediate. It takes a much longer time for a polyethylene liner to swell than it does for a sponge. The exact time it takes for swelling to occur depends on the particular constituents and concentrations of the contained media. However, a hole would not be produced. Also, this absorption is reversible and the material will essentially return to it's original state when the chemical is no longer in contact with the liner.

With regard to typical municipal landfills in the United States, legally allowable levels of chemicals have been demonstrated to have no adverse affect on polyethylene geomembrane performance. The very low levels of salts, metals and organic compounds do not damage polyethylene. A double-lined containment with a leachate (leak detection) removal system effectively prevents any significant, continuous exposure of the secondary membrane to these materials and for practical purposes makes the total liner system even more impermeable.

Chemical Resistance Chart

GSE is the world's leading supplier of high quality, polyethylene geomembranes. GSE polyethylene geomembranes are resistant to a great number and combinations of chemicals. Note that the effect of chemicals on any material is influenced by a number of variable factors such as temperature, concentration, exposed area and duration. Many tests have been performed that use geomembranes and certain specific chemical mixtures. Naturally, however, every mixture of chemicals cannot be tested for, and various criteria may be used to judge performance. Reported performance ratings may not apply to all applications of a given material in the same chemical. Therefore, these ratings are offered as a guide only. This information is provided for reference purposes only and is not intended as a warranty or guarantee. GSE assumes no liability in connection with the use of this information.

NOTES:

(S) **Satisfactory:** Liner material is resistant to the given reagent at the given concentration and temperature. No mechanical or chemical degradation is observed.

(L) **Limited Application Possible:** Liner material may reflect some attack. Factors such as concentration, pressure and temperature directly affect liner performance against the given media. Application, however, is possible under less severe conditions, e.g. lower concentration, secondary containment, additional liner protections, etc.

(U) **Unsatisfactory:** Liner material is not resistant to the given reagent at the given concentration and temperature. Mechanical and/or chemical degradation is observed.

(-) **Not tested**

sat. sol. = Saturated aqueous solution, prepared at 20°C (68°F)

sol. = aqueous solution with concentration above 10% but below saturation level

dil. sol. = diluted aqueous solution with concentration below 10%

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 7 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
365 BOND STREET 365 BOND STREET BROOKLYN, NY	NY Spills E DESIGNATION	N/A

EXECUTIVE SUMMARY

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL LIENS..... Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL..... National Priority List Deletions

Federal CERCLIS list

CERCLIS..... Comprehensive Environmental Response, Compensation, and Liability Information System
FEDERAL FACILITY..... Federal Facility Site Information listing

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF..... RCRA - Treatment, Storage and Disposal

Federal RCRA generators list

RCRA-LQG..... RCRA - Large Quantity Generators

Federal institutional controls / engineering controls registries

US ENG CONTROLS..... Engineering Controls Sites List
US INST CONTROL..... Sites with Institutional Controls

Federal ERNS list

ERNS..... Emergency Response Notification System

State- and tribal - equivalent CERCLIS

VAPOR REOPENED..... Vapor Intrusion Legacy Site List

State and tribal leaking storage tank lists

INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land

State and tribal registered storage tank lists

CBS AST..... Chemical Bulk Storage Database
INDIAN UST..... Underground Storage Tanks on Indian Land
FEMA UST..... Underground Storage Tank Listing

State and tribal institutional control / engineering control registries

ENG CONTROLS..... Registry of Engineering Controls

EXECUTIVE SUMMARY

INST CONTROL..... Registry of Institutional Controls
RES DECL..... Restrictive Declarations Listing

State and tribal voluntary cleanup sites

INDIAN VCP..... Voluntary Cleanup Priority Listing

State and tribal Brownfields sites

ERP..... Environmental Restoration Program Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS..... A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

ODI..... Open Dump Inventory
DEBRIS REGION 9..... Torres Martinez Reservation Illegal Dump Site Locations
SWTIRE..... Registered Waste Tire Storage & Facility List
INDIAN ODI..... Report on the Status of Open Dumps on Indian Lands

Local Lists of Hazardous waste / Contaminated Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 06/30/2011 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

Proposed NPL: Proposed NPL sites . The source of this database is the U.S. EPA.

A review of the Proposed NPL list, as provided by EDR, and dated 06/30/2011 has revealed that there is 1 Proposed NPL site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
GOWANUS CANAL	BUTLER ST (BETWEEN BONDSSW 1/2 - 1 (0.641 mi.)		207	689

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/25/2011 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/09/2011 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

EXECUTIVE SUMMARY

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 4 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 09/27/2011 has revealed that there are 2 SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 10/11/2011 has revealed that there are 11 SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 09/27/2011 has revealed that there are 46 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 41 HIST LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the TANKS list, as provided by EDR, and dated 10/04/2011 has revealed that there are 3 TANKS sites within approximately 0.25 miles of the target property.

CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 CBS UST site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 MOSF UST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 09/27/2011 has revealed that there are 32 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 21 NY Hist Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 06/15/2011 has revealed that there are 31 RCRA-NonGen sites within approximately 0.25 miles of the target property.

HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 HSWDS site within approximately 0.5 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

EXECUTIVE SUMMARY

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 5 Manufactured Gas Plants sites within approximately 1 mile of the target property.

DEC Memo: CSL has been sent to: Joseph Fillips P.O.Box 451 New York, NY 10028-0018 YK. 10/18/04. Paul Casowitz (212-421-2150)an attorney for Mr. J. Fillips called and informed that he is a contact person for this case. And a formal letter in response to our CSL will be sent soon. Y.K. 08/30/05: I attempted to return Paul Casowitz's phone call. His message stated that his client would be filing a brownfields application to handle all the environmental concerns. I will check on this. Steve Scharf Pcasowitz@sprlaw.com Paul Casowitz Sive Paget & Riesel, P.C. 460 Park Avenue New York, NY 10022 AKRF Inc. (Ally, King, Rosen and Fleming) will be consultant submitting application. Toll Brothers Inc., is buying the property. description: Phillips Bros is a trust, the purchase money is going mostly into escrow until the environmetnal issues are resolved. site is on the erie basin of the Gowonus canal. There was some free product identivied in the due diligence environmental sampling. Sampling was done by Petroleum Tank cleaners (718)624-4842. S. Scharf 09/07/05 Sent the following e-mail to Paul Casowitz 2/28/06- "I am following

up on 365 Bond Street. You were going to get back to me with regard to the open spill, spill No. 0407393, on the property and whether your client was going to file a Brownfields application. " thanks Steven M. Scharf, P.E. Reply: Steven, My client is the owner--Toll Bros is the contract vendee, they may have closed on title, I am not sure. Toll Brothers filed the BCP application for the site. I am away on vacation from 3/1-8--let me know if you have an application from Toll Bros. Of course in real estate, one never knows the name---special purpose entities being the rule. The BCP group should be able to advise you by the site location.- Paul Casowitz-Sive Paget & Riesel, P.C., 460 Park Avenue New York, NY 10022 03/02/06: Copy of E-mail to Paul Casowitz: Paul, What I'm being told is that, under the NYS Navigation Law (Article 12), the owner at the time (your client) of the reported spill is responsible for remediation of the discharge. thanks, Steven M. Scharf, P.E. >>> "Paul Casowitz" 3/2/2006 9:44:11 AM >>> Steve, Good---I assume any issues re the spill will be addressed to the applicant. Paul: pcasowitz@sprlaw.com From: Steven Scharf [mailto:sxscharf@gw.dec.state.ny.us] Sent: Thu 3/2/2006 9:33 AM To: Paul Casowitz Subject: RE: 365 Bond Street, Brooklyn, Spill no 0407393 Paul, FYI, A BCP application, App. No. C224116, was processed on 6/7/05. Thanks: Steven Scharf, P.E. NYSDCE refer to John Grathwol. Working on brownfield. S. scharf Previously assigned to S. Scharf and J. Grathwol in Albany office. 10/11/06 - Austin - Reassigned from Central Office staff to Piper, for follow up and closure - end Due to rezoning issues. the applicant withdrew the BCP application in December 2006. 12/08/2008: This spill case was transferred to A. Doronova. AD From now on the progress on this case should be tracked under spill case No.0400876. Toll Brothers is potential buyer who will redevelop the site. AD 04/2010: This site was listed as a part of Gowanus Cannal to EPA's Superfund Program. AD 04/29/2010: Received an e-mail from Mr. Yudelson (attorney for Toll Brothers) saying: "Ainura This email is to confirm that I have met with EPA and EPA indicated they will not be in a position to determine what, if any, remedial activities they will require at the Bond Street properties regarding the Superfund Site until the fall. I expect to meet with them again and will inform you if anything changes. Dave (917)295-6449" 06/2010: Called and spoke with Mr. Yudelson. He told me that Toll Brothers is no longer interested in buying the site, after it was listed as a Superfund site. Mr. Yudelson gave me a contact info in EPA: Mr. Brian Carr, phone: (212)637-3170. AD 07/26/2010: Called and left a message to D. Yudelson. AD 07/28/2010: Called and left a message to Mr. P. Casowitz - attorney for Mr. Joseph Phillips. Later received a call from D. Yudelson. He told me that the site is owned by Mr. Phillips and Citibank. The site is currently for sale, and Mr. Yudelson is representing a potential buyer. He is going to meet with Mr. Phillips regarding the site cleanup and will contact us later with the results. AD 08/04/2010: Called and spoke with Mr. Yudelson. He gave me a contact info of Mr. Niel Dorman (212)753-7500 - attorney for Mr. Phillips. Will call him. AD

so a contaminated soil letter can be sent. 5/25/2005 - Contaminated soil letter sent to: Mr. Leopold Friedman c/o Friedknit Creations 131 West 33rd St., Suite 301 New York, NY 10001 07/27/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called to Sarah Lopez at (212)581-8023 and left message to call me back regarding information of spill. -QA 07/27/06: Ms. Mimi Raygorodetsky, Environmental consultation firm (212)581-8023, she called me back and said She talked to Client (purchaser) and they are going to cleanup the spill very soon. -QA 01/23/07: Called Ms. Mimi Raygorodetsky, Project Manager (Environmental Consultation firm) at (212)581-8023. She is on vacation up to 31, January 2007. Talked to her assistant Mr. Roman Grushka he said he will talk to the people who is working in this project and he will call me back. Called again to Environmental Liability Management, New York and talked to other Project Manager Ms. Nicole Gorelick and said this is a emergency Site has to be investigated impact to groundwater and to provide us with a copy of the phase 2 Site Assessment Report, prepare and submit a remedial action work plan describing how they clean up the site for DEC review and approval. Mr. Pzcimmermann, Principal, Environmental Liability Management called me and said he is trying to reach Environmental Attorney and Client as soon as possible. -QA 02/05/07: Ms. Mimi Raygorodetsky (Project Manager) called me and left message. This week she is going out of station next week on Monday February 12 she will discuss with me regarding spill. -QA 02/12/07: Ms. Mimi Raygorodetsky (Project Manager)called me and said about 6 to 12 month Department of City Planning will do the rezoning. After that construction will begin and same time remediation will be done.-QA 09/13/07: Called Ms. Mimi Raygorodetsky (Project Manager) and discuss about the present status of the spill. She said The Department of City Planning is still doing rezoning, as soon as she will come to know anything about the site. She will inform me. -QA 12/04/2007: This spill case was transferred to A. Doronova. AD No any reports were found in files for 363 Bond Street Site (spill # 0501697). This site and 400 Carroll Street site (spill # 0400867) were terminated without prejudice on 12/19/06 from BCP, where they were submitted as one project. The applicant did not reapplied later. AD 01/2008: These two site are currently under purchase contract, which is scheduled for summer 2008. I have spoken with an attorney - David Yudelso, who represents both an owner of the 400 Carroll Street site and a potential buyer for the two sites. According to him, the potential buyer will implement remediation of the both sites. AD 02/2008:I requested from Mr. Yudelso to submit all investigation reports for these sites and told him that we will schedule a meeting with all involved parties after I will review the reports. Yesterday, I received confirmation call from Mr. Yudelso that he sent requested reports to DEC. Received old reports. Downloaded them to eDocs. Will review. AD 10/03/2008: Spoke with D. Yudelso - attorney regarding situation with this site. he told that the owner wants to reapply for BCP project and that they applied for re-zoning, which will be decided in April, 2009. AD 10/15/2008: Received an email from Mr. Yudelso saying: "Ainora - I am having a comprehensive report prepared by ELM for the Carroll Street/Bond Street sites which will show all existing data. I will forward it as soon as it is done. Dave" AD 10/22/2008: Received an inquiry from Vadim Brevdo of DER regarding status of this spill. Inquiry came to Commissioner from City Councilman DeBlasio. Informed Vadim about situation with this case. Spoke with D. Yudelso. Env. Liability Management (ELM) preparing a summary report

with conclusions and recommendations for remedial actions. Project manager - Mimi Raygorodetsky. AD 10/27/2008: Sent an email to D. Yudelson saying: "Dear Mr. Yudelson, As per our previous phone conversation, please be advised that the Department requests to expedite the submission of the summary report for the above-referenced sites. The report should be submitted no later than November 14, 2008 and should include a remedial action plan. Feel free to contact me if you have any questions or comments. Sincerely, Ainura Doronova" AD 11/13/2008: Called and left a message to D. Yudelson regarding the report submission. Later received an email from him saying: "Ainura- got your voicemail but I am in a meeting. ELM is working on the report since your request and we should have it very shortly. I will find out the exact date and I will respond to you. Dave" and "Ainura - The effort to compile and synthesize all the prior work is taking a little longer than expected to make it understandable. I believe we will deliver the summary report next weds. Please let me know if this presents a problem so that we can avoid having anyone work overnight or on the weekend!!!" Postponed the report submission till November 21, 2008, but said that it is final. AD 11/21/2008: Called and left a message to D. Yudelson regarding the report submission. Later in the day received an email from M. Raygorodetsky saying: "Ms. Doronova, On behalf of Dave Yudelson of Sive, Paget & Riesel and Toll Brooklyn, LP, please find attached an electronic copy of the Remedial Investigation Report and Conceptual Remedy for the Toll Brooklyn, LLC site in Brooklyn, NY. A hard copy (with a CD containing previous studies) will be delivered to your office via Federal Express on Monday. The site is comprised of three adjacent parcels of land that are subject to three active spill listings: 363 Bond Street (Spill # 05-01697) 365 Bond Street (Spill # 04-07393) 400 Carroll Street (Spill # 04-00876) We look forward to working with you to remediate this site. Regards, Mimi Raygorodetsky | Associate Tel: 212.962.4301 ext.311 | Fax: 212.962.4302 | Mobile: 917.952.9906 mraygorodetsky@elmofny.com " DL the report to eDocs. Will review. AD 12/04/2008: Discussed this site with V. Brevdo and J. Kolleeny of DEC. The decision was - to consolidate this spill case with spill case No. 0400867 (400 Carroll Street) since they will be remediated as one project (Toll Brooklyn) and are adjacent sites. AD 12/15/2008: This spill case is closed and referred to spill No. 0400867. AD 04/2010: This spill was reopened due to this site's listing as a part of Gowanus Canal to EPA's Superfund Program. AD 04/29/2010: Received an e-mail from Mr. Yudelson (attorney for Toll Brooklyn, LP) saying: "Ainura This email is to confirm that I have met with EPA and EPA indicated they will not be in a position to determine what, if any, remedial activities they will require at the Bond Street properties regarding the Superfund Site until the fall. I expect to meet with them again and will inform you if anything changes. Dave (917)295-6449" 06/2010: Called and spoke with Mr. Yudelson. He told me that Toll Brooklyn is no longer interested in buying the site, after it was listed as a Superfund site. Mr. Yudelson gave me a contact info in EPA: Mr. Brian Carr, phone: (212)637-3170. AD 07/13/2010: Received an e-mail from Mr. Yudelson with requested info for the site owner: 363 Bond Street Corp. 363 Bond Street, Brooklyn, NY AD 07/28/2010: Called to Friedkmit Creation Inc. - tenant at the 363 Bond Street and asked for a contact info for the owner of the site. Manager of the Friedkmit does not have this information. The owner of the Friedkmit - Mr. Leopold Friedman is out of country. Left my contact info. AD

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Phone: (917) 783-2270
DEC Region: 2
DER Facility ID: 99667
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE" Prior spill number was 9605780 which said that the site was a demolition waste transfer station and a fuel storage area. The area was contaminated with petroleum soil & groundwater impacts. In approx 2001 two large residential condos were built on the site with an open spill number. The spill case was closed in early 2003 for "no recent activity" 4/26/2004 TradeWinds Environmental found a UST on site between 4,000 and 6,000 gal (#6 oil). The tank is being pumped out, but the tank is too close to the condo foundation to be removed safely. Steve Gordon would like to talk with the DEC rep about remediation options 6/23/04 Tipple spoke with Doug from Tradewinds site status requested// 6/24/04 tipple spoke with owner, S.Gordon formerly with Tradewinds and D. Yudelso esq. The owner is currently looking into entering into a Brownfields Cleanup. Will keep DEC updated// tanks removed were encased in concrete and photos were taken//Gordon stated that no soil contamination was observed adjacent to the tanks at the time of removal 06/20/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called to Jan Belessimo, Trade Wynds Environmental at (800)282-8701 she said that she will talk to her Project Manager regarding spill and she will call me back. -QA 06/30/06: Contacted to Ms.Jan Bellessimo because she faxed me only waste manifest of the spill She will talk to her supervisor Mr. R.D.Baldwin to send a clean up confirmation letter to me. -QA 07/05/06: Called to Ms. Jane Belessimo and reminded her to talk to her boss for cleanup confirmation letter. -QA 07/25/06: Contacted Jane, she said she will fax me today the closing confirmation letter. -QA 08/09/06: Called Ms. Jane Belessimo regarding spill closing confirmation letter and left message to call me back. -QA 09/12/06: Mr Argie Balgwin called me and said after talking to his attorney that he will send me a confirmation letter to close the spill. -QA 10/25/06: Called Mr. Argie Balgwin (516)779-7824 and left message to call me back regarding closing confirmation letter for the spill. -QA 11/16/06: Called Jan Belessimo about information of spill, she said that she will talk to her boss and call me. -QA 11/27/06: Called Jan Belessimo about information of spill and left message to call me back. -QA 12/14/06: Called Ms. Jan Belessimo regarding information of the spill. She said that she had already sent to me whatever waste manifest report Tradewinds Environmental has. Some other party worked for this spill. She gave attorney's name and phone number. Mr. David Yudelso (attorney) (212)421-2150. -QA 12/18/06: This spill is being handled by Department's of Brownfield Program (Central Office). I don,t need not to work on this spill. -QA 05/14/07: Called Mr. David Yudelso at (212)421-2150 to discuss the spill. He was not there, left message to call me back. -QA 05/18/07: Called Mr. David Yudelso (Attorney) at (212)421-2150 to discuss if this spill has been terminated from BCP program or not. He said, he will contact client and find out about it then he will call me back. -QA 12/04/2007: This spill case was transferred to A. Doronova. AD 02/08/2008: Called and left messages to A. Baldwin, D. Yedelso and spoke with Ms. Jan Belessimo of Trade-Wynds Env. regarding this site. She was not sure if their company is still involved with the site. She will call back later with some information. AD 03/03/2008: Spoke with J. Belessimo of Trade-Wynds Env., she told me that they no longer work for this site. Called and left a message to D. Yedelso. AD 03/04/2008:

Received a call from D. Yedelson. He represents both property seller and potential buyer. Contract to be signed sometime in summer 2008. The buyer plans to redevelop the site. Neighbor property on 363 Bond Street which is currently under NYSDEC spill #0501697 is also in this contract but represented by other parties. Spoke with J. Kolleeny of DEC regarding this site. AD 03/13/2008: Spoke with D. Yedelson regarding a submission of all investigation reports and scheduling a meeting with all involved parties to discuss the site situation and remediation. Possible STIP. AD 03/20/2008: Received an email from John Grathwol from Albany. Local community group - FROGGs was concern about the site redevelopment and John scheduled a phone call for March 21, 2008 with FROGGs' representative to answer their questions. Sent an email to V. Brevdo of DEC with brief site status update, which was then forwarded to J. Grathwol. AD 03/25/2008: Left a message to D. Yedelson regarding reports submission. He returned my call later, said that all reports are ready and he will email them to me today or tomorrow. Informed him about concerns from local organization. Told him that after I finish to review reports we will schedule a meeting. AD 03/28/2008: Received old reports via email, downloaded them to eDocs. Will review. AD 10/03/2008: Spoke with D. Yudelson - attorney regarding situation with this site. He told that the owner wants to reapply for BCP project and that they applied for re-zoning, which will be decided in April, 2009. AD 10/15/2008: Received an email from Mr. Yudelson saying: "Ainora - I am having a comprehensive report prepared by ELM for the Carroll Street/Bond Street sites which will show all existing data. I will forward it as soon as it is done. Dave" AD 10/22/2008: Received an inquiry from Vadim Brevdo of DER regarding status of this spill. Inquiry came to Commissioner from City Councilman DeBlasio. Informed Vadim about situation with this case. Spoke with D. Yudelson. Env. Liability Management (ELM) preparing a summary report with conclusions and recommendations for remedial actions. Project manager - Mimi Raygorodetsky. AD 10/27/2008: Sent an email to D. Yudelson saying: "Dear Mr. Yudelson, As per our previous phone conversation, please be advised that the Department requests to expedite the submission of the summary report for the above-referenced sites. The report should be submitted no later than November 14, 2008 and should include a remedial action plan. Feel free to contact me if you have any questions or comments. Sincerely, Ainura Doronova" AD 11/13/2008: Called and left a message to D. Yudelson regarding the report submission. later received an email from him saying: "Ainura- got your voicemail but I am in a meeting. ELM is working on the report since your request and we should have it very shortly. I will find out the exact date and I will respond to you. Dave" and "Ainura - The effort to compile and synthesize all the prior work is taking a little longer than expected to make it understandable. I believe we will deliver the summary report next weds. Please let me know if this presents a problem so that we can avoid having anyone work overnight or on the weekend!!!" Postponed the report submission till November 21, 2008, but said that it is final. AD 11/21/2008: called and left a message to D. Yudelson regarding the report submission. Later in the day received an email from M. Raygorodetsky saying: "Ms. Doronova, On behalf of Dave Yudelson of Sive, Paget & Riesel and Toll Brooklyn, LP, please find attached an electronic copy of the Remedial Investigation Report an Conceptual Remedy for the Toll Brooklyn, LLC site in Brooklyn, NY. A hard copy (with a CD containing previous studies) will be delivered to your office via Federal Express on

Monday. The site is comprised of three adjacent parcels of land that are subject to three active spill listings: 363 Bond Street (Spill # 05-01697) 365 Bond Street (Spill # 04-07393) 400 Carroll Street (Spill # 04-00876) We look forward to working with you to remediate this site. Regards, Mimi Raygorodetsky | Associate Tel: 212.962.4301 ext.311 | Fax: 212.962.4302 | Mobile: 917.952.9906 mraygorodetsky@elmofny.com " DL the report to eDocs. Will review. AD Reviewed the report. It includes conceptual RAP with proposal to excavate contaminated soil. AD 01/05/2009: Spoke with M. Raygorodetsky regarding submission of the actual RAP. She told me that their company does not have contract yet to perform the remediation. She will speak with the owner and then call back. AD 01/12/2009: Received an email from M. Raygorodetsky saying: "Hello Ainura, We spoke last week about the timing of submission of a RAWP for the Toll Gowanus Site, which is subject to three spill numbers: 0501697, 0407393, and 0400876. I've spoken with the client, Toll Brooklyn, LLC and the environmental attorney, Dave Yudelso of Sive Paget & Riesel, PC about the timing of RAWP preparation. We will be finishing our draft of the RAWP this week and providing it to our client for review. We hope to have a RAWP for you the week of January 19. Please let Dave Yudelso or me know if you have any comments or questions. Mimi Mimi Raygorodetsky | Associate Tel: 212.962.4301 ext.311 | Fax: 212.962.4302 | Mobile: 917.952.9906" 02/09/2009: On January 26, 2009 received this email from M. Raygorodetsky saying: "Hello Ainura, I wanted to let you know that we were slightly delayed in getting our RAWP submission to you last week. We are pulling together the final loose ends on the RAWP and hope to have something for you by the end of the week. I apologize for the delay. Thanks, Mimi Raygorodetsky" Received RAP by Env. Liability Management. DL to eDocs. Will review. AD Reviewed the RAP. It proposes excavation of the hot spots in the vicinity of the well MW-5 and soil boring SB-1 down 2 feet into the water table. Excavation in these areas will advance laterally in all directions until no further evidence of free product remains. ELM also proposes to implement in-place soil stabilization or chemical oxidation in areas where elevated concentrations of BTEX and SVOCs are present. According to a Phase II Site Investigation report for 400 Carroll Street, 3 1,500-gallon UST were removed from the site in 2004. No UST closure report was submitted to DEC. Location of the former UST area is not depicted at the site's plan. AD 03/17/2009: Called and left a message to M. Raygorodetsky (MR) of ELM. AD 03/20/2009: Called and had a conference call with MR and D. Yudelso (attorney) regarding the submitted RAP. Asked them, if there are any residential buildings in the vicinity of the site. Some of them are one block away from the subject property. Also, requested to submit a Figure 5 from the RAP with locations of the 3 former 1,500-gallon USTs, which were removed in 2004. Number of injection points for the oxidation will be given later in an addendum to the RAP, if this approach will be selected. GPS to identify any other USTs will be implemented after buildings on the site will be demolished. Will discussed this site with J. Kolleeny. AD 03/25/2009: Discussed the RAP with J. Kolleeny. He indicated a contaminated area which should be included in remediation. Asked him about proposed soil stabilization method. Will wait for the submission of the requested information. AD 04/08/2009: Called and left a message to D. Yudelso. Spoke with him later. Requested to submit all UST closure reports for all applicable parts of the project. Also asked if any remedial actions are planned for area of soil boring SB-3 on 363 Bond

S106385304

Street, which indicated high petroleum contamination. AD 04/27/2009: Called and left a message to D. Yudelson. Requested to expedite the submission of the data. Spoke with him later. AD 04/29/2009: Received an e-mail from D. Yudelson saying: "Ainura, I know that you asked for information on the tank removal, a registration correct and information about remedial response for sb3. Did I miss anything? I want to send a letter in respectfully requesting more time (a few weeks) to gather the information because the Superfund listing proposal for the site has all team members tied up and the project may die if we don't focus on that. Dave David S. Yudelson Partner Sive, Paget & Riesel P.C. 460 Park Avenue New York, NY 10022 917 295 6449" Sent him a reply, stating all information, which should be submitted to us. AD 05/13/2009: Received a letter from D. Yudelson with a request to postpone data submission till June 15, 2009. Approved the request. AD 06/18/2009: Called and spoke with D. Yudelson regarding the requested data submission. He told me that they have prepared the report and will send it with today's mail. AD 06/19/2009: Received an e-mail from Basil Borisov of ELM saying: "Ms. Doronova, Attached is the Addendum to the Remedial Action Plan for the 363-365 Bond Street and 400 Carroll Street properties in Brooklyn, NY. A hard copy of the Addendum is being sent to your offices by FedEx. If you have any questions or concerns, please don't hesitate to contact us or David Yudelson at Sive Paget & Riesel. Sincerely, BASIL BORISOV | Project Manager Tel 212.962.4301 ext 304 | Fax 212.962.4302 | Cell 646.895.2943" DL pdf copy to eDocs. AD 06/23/2009: Received hard copy of the Addendum to the RAP. Will review. AD 06/24/2009: Reviewed the Addendum to the RAP. It proposes remediation in the vicinity of hot spot SB-3 as was requested by DEC. The addendum also includes a plan of 400 Carroll Street with locations of former USTs field. While no formal end-point sampling was performed as part of UTSs removal, ELM had subsequently installed one soil boring SB-9, one monitoring well MW-1 and one test pit TP-5 in the former USTs area as part of the Phase II ESI. Excavation in these areas will advance laterally in all directions until no further evidence of free product remains. ELM submitted more detailed explanation of in-place soil stabilization method, which was proposed for areas where elevated concentrations of BTEX and SVOCs are present. A bench-scale mixing study will be performed to select site-specific stabilization mix. Discussed the plan with J. Kolleen of DER and possibility of excavation in the area of SB-3. Called and spoke with Jim Harrington - Chief Technology Section of Division of Environmental Remediation, Albany regarding application of soil stabilization method in NYS. Changed site priority from P0 to P1. AD 06/25/2009: Sent to Mr. Harrington the Addendum to the RAP via e-mail for review. AD 07/02/2009: Met with Mr. Harrington to discuss the feasibility of application of the soil stabilization method for this particular site. His opinion was that the site is a good candidate for the soil stabilization. A work plan for bench-scale mixing study should be submitted to DEC for review and approval. AD 07/22/2009: Called and spoke with David Yudelson (attorney) regarding excavation of SB-3 area and a work plan for bench-scale mix study. He agreed to make these changes and asked for an e-mail request from DEC. He also mentioned that soil stabilization methods was approved by MGP of DEC (Albany) for Nyack MGP Site. Will send him e-mail. AD 07/23/2009: Sent the e-mail to D. Yudelson with the following remarks to the Addendum to RAWP: - A work plan for bench-scale mix study should be submitted to DEC for its review and approval; - An excavation should

TOLL BROOKLYN (Continued)

S106385304

be proposed for the area in the vicinity of SB-3 instead of in-situ remediation. Also, asked to provide me with information on the MGP site, where the soil stabilization method was approved by DEC. AD 09/02/2009: Called and left a message to D. Yudelson regarding submission of bench-scale mix study WP. AD 09/03/2009: Received an e-mail from Mr. Yudelson which states that ELM is working on the work plan. AD 09/22/2009: Received an e-mail from Mr. Yudelson that he had received the work plan from ELM and now is in a process of reviewing it. The WP will be submitted to DEC shortly. AD 10/15/2009: Received an e-mail from D. Yudelson with attached work plan for bench-scale mixing study. DL to eDocs. Will review. AD 11/06/2009: Reviewed the work plan for bench-scale study. Discussed the work plan with Jim Harrington of DER Albany. Mr. Harrington made a few comments to the submitted work plan. The necessary changes to the proposed work plan will be required from the consultant before the work plan approval. AD 11/10/2009: Called and left a message to Mr. Yudelson regarding the work plan modifications. AD 01/20/2010: Called and spoke with D. Yudelson regarding the revised work plan for bench-scale mixing study. Requested to expedite the submission of the plan. He will contact ELM and get back to us. AD 01/28/2010: Received an e-copy of the revised work plan. DL to edocs. Will review. AD 02/02/2010: Reviewed the revised bench-scale mixing study work plan for the Toll Brooklyn Site, and it seems that all the requested changes were made. AD 02/03/2010: Forwarded the work plan to Jim Harrington. AD 02/04/2010: Discussed the revised plan with J. Harrington and J. Kolleeny. Issued an approval letter to Mr. Yudelson. DL copy to eDocs. AD 03/2010: This site was recently listed as Superfund as a part of Govanus Channel. 04/27/2010: Called and spoke with D. Yudelson regarding the site status. He told that EPA will perform some sampling at the site to study if the site is contributing to the Govanus Channel contamination, and the results will be ready in early fall. Asked him to send me an e-mail summarizing site status. AD 04/29/2010: Received an e-mail from Mr. Yudelson (attorney for Toll Brothers) saying: "Ainura This email is to confirm that I have met with EPA and EPA indicated they will not be in a position to determine what, if any, remedial activities they will require at the Bond Street properties regarding the Superfund Site until the fall. I expect to meet with them again and will inform you if anything changes. Dave (917)295-6449" AD 06/2010: Called and spoke with Mr. Yudelson. He told me that Toll Brothers is no longer interested in buying the site, after it was listed as a Superfund site. Mr. Yudelson gave me a contact info in EPA: Mr. Brian Carr, phone: (212)637-3170. AD 06/23/2010: Received a phone call from Mr. Brian Carr of EPA, phone: (212)637-3170. He told me that they performed some sampling at the site. He gave a contact info for the owner of the 400 Carrol Street site: Mr. David Levkowitz, phone: (917)838-2270. Discussed the site with J. Kolleeny and Vadim Brevdo of DEC. AD 07/2010: Called and spoke with Mr. Yudelson regarding the site cleanup plans. AD 07/26/2010: Called and spoke with Mr. Levkowitz. He asked to contact his attorney - Mr. Yudelson. Called and left a message to D. Yudelson. AD 07/28/2010: Received a call from D. Yudelson. He told me that he is discussing the remedial option for the site with Mr. Levkowitz, and they considering to perform an excavation of the contaminates soil instead of the previously proposed soil stabilization. He is going to meet with Mr. Phillips - owner of 363 Bond Street site regarding the site cleanup and will contact us later with the results. Told him that a

S106385304

stipulation agreement should be signed by the site owners. AD 12/03/2010: Received an e-mail from D. Yudelson saying: "Ainura, Brian Happy holidays! Attached please find a proposed remedial action plan for the 400 Carroll Street property. It provide for excavating and offsite disposal of the petroleum contaminated soil. Lets schedule a meeting or call to discuss this and scheduling issues. Dave" DL pdf copy of the RAP. Will review. AD 12/23/2010: Reviewed the RAP. Although soil stabilization was initially proposed, and approved by DEC, now the consultant proposes excavation and disposal of soils in the "hot spot" areas, that were previously intended for soil stabilization, as more appropriate alternative. PWGC is proposing that soils in the three "hot spot" areas be excavated to a depth of approximately seven feet below grade. Since the project site is located on the Gowanus Canal, they will install soil erosion and sediment controls prior to excavation activities. They note that this RAP is intended to address petroleum impacted soils in order to obtain closure of the NYSDEC Spill File. They will not address historic fill material containing elevated concentrations of SVOCs and metals. AD 01/2011: Called and spoke with David regarding a meeting to discuss the proposed RAP with him and EPA. He said that the meeting will be scheduled after EPA will review the work plan. AD 04/20/2011: Called and left a message to D. Yudelson regarding the meeting. AD 04/26/2011: Did not receive any response. Called again and left a message. AD 05/10/2011: Called and spoke with David Yudelson regarding the meeting. Told him to schedule it after June 20th, when I will return from vacation. AD 06/30/2011: Called and left a message to David. AD 07/01/2011: Received a phone call from Mr. Yudelson. He said that he had a meeting with EPA last week. Requested why I was not informed about this meeting. Mr. Yudelson said that this meeting was regarding EPA's requirements to a proposed RAP. Required him to send me a summary e-mail. AD 07/07/2011: Received an e-mail from David saying: "Ainura This email confirms our telephone conversation that we have been working with EPA and the owner is prepared to implement the RAP we had previously submitted to you. The work would be undertaken in the fall. Please confirm the RAP, which provides for excavation and offsite disposal is approved . Dave" Since this RAP was submitted to DEC in December of 2010 to require Mr. Yudelson to resubmit the work plan with a current date. Discussed with J. Kolleeny the proposed RAP. Post-excavation end-point soil samples from the bottom of the excavation should be collected. Called and left a message to Mr. Yudelson regarding submission of RAP with a current date. AD 07/19/2011: Received the requested RAP. Sent an approval letter to Mr. Yudelson. DL pdf copy of the letter to eDocs. AD

Remarks:

Were excavating on the property and found a tank in the ground that know one knew was there. The vent was missing on the tank causing the spill. Pumped the tank so far and have not yet removed the tank due to weather. removed 3000 gal of straight product so far.

Contact Name: HYDRO TECH
Contact Phone: (718) 636-0800
DEC Region: 2
DER Facility ID: 324141
DEC Memo: Vought was daytime "runner" on Dec 5th. 1/16/07-Vought-Received and reviewed Remedial Action Plan from HydroTech Environmental (Eva Jakubowska 718-636-0800) dated 12/28/06. HydroTech was retained by Bright City Development LLC. Site is developed with two story warehouse used to store plumbing and construction materials and the second floor is used as an office. "Site was formerly occupied by a chemical manufacturing company for 15 to 20 years...". Elevated SVOC performed by GAC Environmental in June 2006 showed elevated levels of SVOCs. "GAC determined that the SVOCs had no source and they are associated with fill material". Soil excavation will be performed once existing building is demolished. Remedial Action Plan includes the collection of 15 endpoint samples as per NYSEC Spots #14 guidelines analyzed for 8260/8270. Final excavation report will be submitted to DEC. Vought sent letter approving of RAP with endpoint sample collection. Vought spoke to Jakubowska and site is going to be redeveloped as residential property. Soil analyticals showed large PAH exceedences and 339ppb MTBE(SP3 5'bg) and 463ppb MTBE(SP3 20'bg). Vought called Vought sent letter requiring: 1)installation of vapor barrier. Vought will fax copy of letter to HydroTech at 718-636-0900 once email of owners address received from Jakubowska. 1/18/06-Vought-Received email from Jakubowska that site contact address is: Louis ZS Vitanza & Sons LLC 111 3rd Street, Brooklyn, NY 01/19/07-Vought-Sent out letter with requirements and one month due date to above address. 4/16/07-Vought-Received call from John Raine (On The Level Enterprises 212-233-5450) who is in process of purchasing property. Raine said site is not little E designated. Site may be excavated to roughly 6' below grade. Raine will demolish buildings and start excavation in this area and submit endpoint samples results in RAP. 12/7/07-Vought-Received call from PW Grosser Zeb Youngman (631-589-6353 fax:631-589-6705). Youngman is being retained by Hudson Companies (Alan Hajtler 212-777-9500) and PW Grosser will be following Hydrotechs remediation plan and begin excavation and collect endpoints. Will oversee installation of vapor barrier. Vapor barrier only required at present due to SVOCs. Zeb Youngman will send in letter updating progress. 04/22/08-Vought-Received copy of Long Island Well Permit Application for construction dewatering from Griffen Dewatering -New England Inc -908-851-2100 addressed to DEC Steven Watts. Construction will be new row houses. One groundwater sample shows no VOC detections. Vought called Alan Hajtler for update on spill requirements and left message of outstanding requirements and to return call to DEC. Vought will not approve dewatering plan until workplan is received and reviewed for collection of endpoint samples and installation of a vapor barrier. Vought received call from Hajtler and he will have PW Grosser send in letter with scope of work including collection of endpoint samples and installation of vapor barrier. Vought also had meeting with DEC Austin and DEC Nagi which resulted in approval for dewatering system coming from Water Unit and not from Spills Unit. 04/25/08-Vought-Received call from PW Grosser (Zeb Youngman) and DEC Vought already received and approved RAP including collection of endpoint samples and installation of vapor barrier. 05/20/08-Vought-Received call from and spoke to Zeb Youngman and spill from historic fill contamination which is across entire site.

S108296533

Phase II submitted to DEC only for one of five lots. Endpoint samples will be collected at 5' depth. 550 fuel oil tank that was emptied was also found and samples will be collected for analysis. One sample per lot due to SVOCS most likely of urban fill nature and vapor barriers will be installed or other vapor mitigation efforts.

1/13/09-Vought-Received call from and spoke to Zeb Youngman and RAP was prepared for lot 40. New information received that numerous additional lots will be used for construction. Left portion of property is historic fill which has been removed and endpoint samples were collected. Soil on east side is petroleum impacted and soil is being excavated. Site being redeveloped from condo. No construction at petroleum impacted soil. All contaminated soil will be removed from the site down to groundwater at 10'bg. No dewatering will occur. Due to development of site and petroleum contamination DEC will receive Addendum to RAP within two weeks. Vought also discussed fact that development must not proceed until a RAP is approved by the Department. 05/12/09-Vought-Received call from and spoke to PW Grosser Youngman and spill closure report will be submitted to DEC. All contamination has been removed as per endpoint and vapor barrier will be installed. Groundwater is clean as well as per Grosser.

06/16/09-Vought-Reviewed UST/Spill Closure Report dated May 2009 and received on 5/15/09 from PW Grosser. Report documents removal of three (550-gallon) fuel oil USTs and removal of petroleum impacted soils. Property formerly contained a four story residential/commercial building. Building is being constructed and "four story residential townhouse buildings with basements are in the process of being constructed". The subject site previously consisted of four separate tax lots and was later divided into eight separate tax lots. "A Phase II ESA was performed within the boundaries of old Lot 44 by GAC environmental in June 2006". Construction/remediation began on the site in May 2008. WESTERN PORTION-Fill material to a depth of 5'bg. "No evidence of petroleum impact or a specific contaminant source was identified..." Four endpoint samples collected at a depth of 5'bg. Soil endpoint analyticals show no TAGM 4046 VOC Soil Cleanup Objective exceedences and some PAH exceedences attributable to historic fill material. EASTERN PORTION-Three (550-gallon) fuel oil USTs were discovered and USTs were empty. "Following the removal of the USTs, soils in their vicinity contained visual and olfactory evidence of petroleum impact". "Mr. Vought suggested that a Remedial Action Plan Addendum be prepared since RAP prepared by HydroTech did not address USTs or petroleum impacted soils". RAP Addendum was submitted to DEC on 1/15/09. A total of 1548.8 tons of impacted soil was removed. "Petroleum impacted soils were excavated to approximately two feet beneath the groundwater table, which exists at approximately eight feet below sidewalk grade. Fifteen endpoint soil samples and two bottom groundwater endpoint samples were collected and analysis showed only one minor PAH exceedence. "A Preprufe 300 vapor/moisture barrier was installed beneath the entire foundation of the building." Report recommends No Further Action. 06/16/09-Vought-Called and spoke to PW Grosser Youngman (cell:516-807-6896) and notified him that DEC Vought never reviewed nor approved of RAP Addendum dated 1/15/09. Yougman stated that numerous messages were left with Vought and no reply was received. Vought stated that RAP was never approved and had to be submitted and that in future due to high caseload that supervision should be contacted if DEC Project Manager does not respond. Youngman to send in RAP Addendum to DEC. 07/07/09-Vought-Received copy of RAP

Addendum on 6/22/09 from PW Grosser dated 1/15/09. Site consisted previously of four separate tax lots. Site formerly occupied by chemical manufacturing company. Construction of residential apartment building with full basement. Two (550-gallon) and one (1800-gallon) UST found in lot 41 and petroleum impacted soil in lots 40 and 41. Tanks removed from site. RAP includes excavation of impacted soil to clean soil and or groundwater and collection of endpoint samples and installation of a Preprufe 300 waterproofing barrier which will "cover the entire footprint of the building". Due to overexcavation of site, collection of clean endpoint samples and installation of vapor moisture barrier, spill closed and NFA with cc to PW Grosser sent to: Hudson Third, LLC 826 Broadway - 11th floor New York, NY 10003 07/07/08-Vought-Scanned and Edoc'd file.

S105142002

Street. The block and lot are 465 and 29. The property was built in 1931. The deed was transferred on 11/15/01 from Alfonso Figiolia to Gradler NY LLC, 18 Bergen Street, Brooklyn, 11201 and then to NYC Industrial Development Agency, 110 William Street, Manhattan, 10038 on the same day. ACRIS has the date of multiple transfer as 1/30/02. There is no PBS registration. There is one document in the case file. It is the Preliminary Design for Application of Bioremediation and the Site Assessment Protocol and Design Remediation Work Plan dated 11/11/01 and produced by New York Petroleum & Drilling Corp. A previous investigation had revealed the presence of VOCs and SVOCs. The report states that there may be a leaking UST on site. During this investigation, six borings were performed to 12 feet within the building footprint and the parking area. Groundwater samples weren't taken. The water table is at 3 to 12 feet below grade and the site elevation is 5 to 15 feet (placing the water table at sea level). The Gowanus Canal is 1,000 to the southeast. Twelve borings were planned for the latter investigation. The total depth of the borings was planned for 16 feet below grade. Both soil and groundwater samples would be taken. Bioremediation would be used to remove the residual soil oil contamination. I tried calling NYPDC at (800) 958-1941, but this number was no longer in service. I checked the New York Corporation database and found out that the company had been dissolved effective 7/29/09. I tried to find the NYC Industrial Development Agency, but there was no such listing in the phone books or the internet. 12/9/09 - Raphael Ketani. I made an unannounced site visit. The actual location of 106 3rd Street was not clear. The street numbers on one side of the street in this part of Brooklyn are not coordinated with the street numbers on the other side. In other words, 99 3rd Street may be opposite 106 3rd Street. I entered a copier supply company building, TGI Inc. (see E-docs). This looked like a very new building. The outside was clean and the inside looked fresh. I met Steve Adler, the owner of the company (718) 237-0060, ext 1104. We went outside to look at the various lots and to try and figure out where 106 3rd Street could be. Mr. Adler explained that when he first bought his current property, the City sent him bills for several different addresses. He said he paid the bills, but he wasn't sure whether he owned these other properties. He added that the matter wasn't cleared up until after two years. He said that his company is at 116-120 3rd Street. He said that he owns this lot and that it was designated lot 33 after he bought the property. He said that it was split off from lot 29. He said that he joined a special development group called the NYC Industrial Development Agency. Mr. Adler added that he owns the building, but they own the deed to the land. He said that he currently owns several other buildings on 4th Street. I asked him whether part of his property is 106 3rd Street. Mr. Adler said that the addresses change every 20 feet. I asked him whether the fenced property next to the warehouse at 92 3rd Street is 106 3rd Street. He said that it could not be. He suggested that the property is at least part of the unpaved parking area that he leases partly and owns partly (see E-docs). I asked him whether the enclosed paved parking area is his property (see E-docs). He said that it definitely is, but the address is 116 3rd Street. We discussed the matter back and forth, but didn't come to a conclusion as to where 106 3rd Street was. I told him that I will do more research and try to figure this out. Mr. Adler said that he is going on vacation, but he will be back on January 22, 2010. He told me he will look in a book he has which contains documents regarding the property he

WAREHOUSE (Continued)

S105142002

originally purchased before selling it to the Industrial Development Agency. He added that there was an old warehouse on the site of his company, but it was torn down. He said that a pipe was discovered below ground, but it wasn't an oil pipe or a gas pipe. He also said that the name New York Petroleum and Drilling Company sounded familiar. He said that there was an environmental investigation, but no tank was found. Mr. Adler finished by saying he will look for a soil boring report in his book of documents and let me know whether he finds anything. I thanked him and the visit ended. 12/11/09 - Raphael Ketani. I did some more research via Property Shark and ACRIS. I discovered that the lot containing 106 3rd Street comprises both the unpaved parking area and the enclosed paved parking area. I will send a letter to the Industrial Development Agency requesting a site investigation. 12/14/09 - Raphael Ketani. The letter to the NYC Industrial Development Agency went out today by regular mail. 12/30/09 - Raphael Ketani. A conference call took place between Krista Halpin, Assistant Vice President for Compliance, of NYC IDA (212) 312-3828, Austin George (intern for NYC IDA), and myself. The issue discussed was the letter that I had sent and who has liability for investigating and cleaning up the spill. Ms. Halpin stated that IDA is not responsible if the original investigation took place before the deed was transferred to IDA. Mr. George stated that the deed was transferred during November 2001 and that the spill was reported on 9/4/01. Ms. Halpin stated that, therefore, IDA is not responsible and that Mr. Adler is. Ms. Halpin added that IDA only holds a nominal ownership of the deed for tax purposes and benefits to the leasee, Mr. Adler. I told her that IDA is listed as the sole deed holder in ACRIS. She said that Mr. Adler is responsible. I told her that I will send a letter to Mr. Adler. I asked her what his company is called. She said it's T & G Industries, 120 3rd Street, Brooklyn, 11231. I sent the letter to Mr. Adler by regular mail and by certified mail. 1/4/10 - Raphael Ketani. The green return card was received today with a signature belonging to Beth(?). Mr. Adler (cell (917) 548-6336) left me a message that he would like to discuss the spill with me. However, he is out until January 22. So he asked that I call him back on this date. 1/6/10 - Raphael Ketani. Mr. Adler called me today. He said that he received DEC's 12/30/09 letter. He reminded me that he was still on vacation and would be so until 1/22/10. He asked for an extension regarding the deadline in the letter. I gave him until 2/21/10 to start the soil investigation. Later, Ms. Halpin called to confirm the contents of my conversation with Mr. Adler. I explained that he had until 2/21/10 to either produce documentation regarding the results of the subsurface investigation, or to conduct a new investigation. She asked that the NYC IDA be kept in the loop. 1/25/10 - Raphael Ketani. I spoke to Mr. Adler and reminded him that the DEC was still expecting him to either submit the old subsurface investigation report or to commence a new investigation. He said that he will get back to me later this week to let me know what he plans to do. 1/27/10 - Raphael Ketani. Ms. Halpin called to ask whether DEC gave Mr. Adler a one month extension for starting a subsurface investigation. I told her that we did and that he has until 2/21/10 to either find documentation from the previous and send it to DEC, or to start a new investigation. 2/4/10 - Raphael Ketani. The appointment for today took place as scheduled. I met Mr. Adler. He showed me a Phase I report, a Phase II report, a proposal for bioremediation, and other documentation pertaining to the original environmental evaluation of the site. I explained to him

S105142002

what the soil analytical results meant. He made copies of the documents for DEC. Then I left the site. I reviewed the Phase I report, the Phase II report, the Preliminary Design for Application of Bioremediation plan, the Site Assessment Protocol and Design Remediation Work Plan, and an unnamed report dated 10/7/01. The subject area comprised a vacant lot and an adjacent brick building at 106-110 3rd Street. The areal extent of the property is 80 feet by 80 feet (Preliminary Design for Application of Bioremediation plan). According to the documentation that I reviewed, a UST was suspected to be present under the building, but was never found. According to the Phase I report, the building was used as a garage and a car repair shop. The vacant lot had been used as a junk yard for a number of years. A total of six soil borings were conducted in the vacant lot and the building next door. According to the soil analytical results in the Phase II report, there were few exceedences of the latest TAGM 4046 soil RSCO limits. These exceedences were among the benzo series analytes and a couple of their associated combustion products. There were no VOC hits from the soil samples collected on 8/8/01. The second set of three borings were conducted on 9/12/01 and soil samples were collected. The SVOC results for B-1 were a little higher than those for the B-1 soil sample taken on 8/8/01. There were also 11 VOC hits for these the second set of soil samples. However, the hits were very low. The Preliminary Design for Application of Bioremediation plan contained a diagram that showed the groundwater flow to be to the west. Boring B-5 was depicted in the diagram, but this is the only instance where the boring appears in any of the documents. The Site Assessment Protocol and Design Remediation Work Plan states that 12 borings will be performed. However, there is no additional documentation that indicates these borings were ever done. The collection of documents does not provide any further information that would be helpful regarding understanding the subsurface conditions. From my review, it appears that a groundwater sample was never taken, even though the drilling company was able to reach the water table. The water table is believed to be at the same elevation as the Gowanus Canal which is 1,000 feet to the southeast. Soil treatment was proposed, but there is no documentation indicating that it ever took place. Lastly, it is not known where the 6 borings were physically situated within the boundaries of the property comprising 106-110 3rd Street. Only six (6) soil borings were performed, but the area being investigated was relatively small with no known history of USTs, though one UST was originally suspected to be present. The small number of borings was probably the minimum necessary to get a fair idea about any contamination in the subsurface. Also, Mr. Adler had stated during my initial site visit on 12/9/09 that the pipe that was discovered below ground was not an oil pipe. The soil analyticals were almost entirely below TAGM and the exceedences were not deemed significant enough to warrant another investigation. About 9 years have passed since the spill was discovered. Natural attenuation has probably reduced the contaminant concentrations further since both the original vacant lot and the site which is now a vacant lot (but which used to contain a building) have been subjected to precipitation and soil water percolation. I have determined that the investigations that were performed have reasonably proven that there is no threat to people or the environment. Therefore, I am closing the spill case.

Remarks: contaminated soil results

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Carroll street c. 153 2nd street (Block #: 967, Lot #: 1). alt.
address: 322 3 ave found two BCP cases under name of Gowanus Village
I LLC: - C224118 (for 420 Carroll Street site) - C224099 (for 430
Carroll Street and 153 2nd street site) BCP application C224118 was
rejected on 08/30/06 with following reason: "1. site's known
industrial and manufacturing history doesn't indicate that there was
a sufficient disposal of contamination that would or may complicate
the redevelopment of site;" BCP application C224099 was approved, but
was terminated as owner never replied back. found following
investigation reports from BCP application file C224118: 1. Phase I,
dated Feb. 16, 1999 - for 420 Carroll Street 2. Phase II, dated Mar.
19, 1999 - for 420 Carroll Street 3. Phase I, dated Dec. 31, 2004 -
for 420 Carroll Street 4. limited Phase II (adjacent properties),
dated Mar. 1, 2005 - for 430 Carroll street and 153 2nd street 5.
subsurface investigation, dated Jun 28, 2005 - 420 & 430 carroll
street left message for Sara Mirski (718-398-3200) at Boymelgreen
developers, who applied for BCP program.

***** phase II was done at 420 Carroll
street site in 1999. abstract of Phase I and II reports: - three
industrial buildings on-site: a two story and a three story
warehouse behind the front buildings - during phase I, found 9 sealed
floor drains in front buildings - review of sanborn maps indicated
presence of a gasoline UST in parking lot - one 275 gal aboveground
chemical storage tank noticed on the third floor of the front
building, two 275 ASTs noticed inside boiler room and one 2000 gal
AST noticed on the main floor of building - groundwater flow beneath
the site is in a generally westerly direction as obtained from maps -
prior to 1995, area of single story building was vacant and formerly
utilized as a junk automobile storage area <----- - two
areas of concern were identified during Phase I; gasoline UST located
in the parking area east of buildings and floor drains located in two
story building on east side of the property <----- - two
soil borings were completed around tank location, borings were
advanced from grade to water table - no PID readings were detected
above background level and no soil samples were selected for analysis
<----- - one groundwater sample was collected from each borings
- three floor drains (FD-1, FD-2 and FD-3) were identified in the two
story building on east side of the property - drain for FD-1
discharges directly to subsurface soil. soil below drain were dry -
drain for FD-2 was clogged with sludge, approx. one ft of sludge was
removed and found pipe extending downward, discharge point could not
be determined, sediments removed from drain was black and oily and
had a strong pungent odor. sludge sample was collected - drain for
FD-3 was connected to municipal sewer system - samples collected from
drain 1 & 2 - found contamination in sludge sample from FD-2 (Xylene:
7300 ppb, 1,2,4-Trimethylbenzene: 24,000 ppb)

***** Limited Phase II was done at 430
Carroll street and 153 2nd Street sites. abstract of limited Phase II
done in 2005: - Hydrotech did investigation - carroll street parcel
is occupied by a Mister Softee-brand commercial icecream business and
consists of a 1 story brick building with no basement - elevation of
site is approx. 10-15 ft above sea level - regional groundwater flow
beneath the site is toward the west, in the direction of Gowanus
canal and Upper New York Bay <----- - GPR survey was
performed and no significant anomalies were noted - six soil probes
were installed, three (HTE-2, HTE-3 and HTE-5) were installed on 2nd

S106704100

street parcel and three (HTE-6, HTE-7 and HTE-8) were installed in carroll street parcel (430 carroll st) - HTE-6 was installed at the area of concerned identified as a 275 gal waste oil AST and staining in the southwest portion of the parcel (430 carroll st) - HTE-7 was installed at the area of concerned identified as a 275 gal fuel oil AST in the eastern portion of the parcel (430 carroll st) - HTE-8 was installed in a former floor drain within the footprint of the building - max. PID (3,675 ppm) was measured at 2 to 4 ft at boring HTE-6 (at waste oil tank location) - sump pit was observed approx. 3 to 5 ft south of waste oil tank in southwest portion of carroll street parcel - petroleum staining was noted in the sump pit, on the waste oil tank and on the asphalt in the vicinity of both structures - due to the interior conditions of the sump pit, depth of pipe inside sump pit could not be determined - found contaminated sludge in sump pit - two groundwater probes (HTE-4: one in 2nd street parcel and HTE-6: one in carroll street parcel) were installed and one well (HTE-1: in 2nd street parcel) was sampled - groundwater probe HTE-6 was installed at the location of the waste oil tank and sump pit - depth to groundwater beneath the carroll street parcel was measured to 15 ft bg and beneath the 2nd street parcel was measured at 17 ft bg <----- - no petroleum sheen or separate phase product was noted during sampling of any groundwater probe or well - found heavy SVOC contamination at HTE-2, HTE-3, HTE-5 (at 2nd street parcel with maximum at HTE-3), HTE-6 and HTE-7 (at carroll street parcel with maximum at HTE-7) - found VOC contamination at HTE-5 and HTE-8 - found groundwater contaminated at HTE-1 (at 2nd street parcel) - found heavy groundwater contamination at HTE-6 (at carroll street parcel and close to waste oil tank and sump pit) soil analyticals from 2nd street parcel:

ppm at 4-6 ft and found refusal at 6 ft
***** subsurface investigation was
done in June 2005 at 420 and 430 Carroll Street sites. abstract of
subsurface investigation report: - during investigation installed
three soil borings (GB-1/S, GB-2/S and GB-6/S: all on 420 carroll
street), four monitoring wells (GB-1, GB-2 and GB-3 on 420 carroll
street and GB-4 on 430 carroll street) and five soil-gas probes
(SG-1, SG-2 and SG-3 on 420 carroll street, SG-4 and SG-6 on 430
carroll street) - soil probes were sampled from ground surface to
depths ranging from 8 to 12 ft bg - olfactory evidence of petroleum
constituents and low level of organic vapors ranging from 10 to 50
ppm were encountered in soil samples obtained from GB-6/S (on 420
carroll street) - soil vapor samples were collected 2 inches below
concrete slab in SG-1 through SG-4 and 4 ft below the surface at SG-6
<----- - few SVOC compounds found above limit in soil sample
from GB-1/S at 6-8 ft bg - no VOC contamination found in any soil or
groundwater samples - no contamination found in soil gas samples
summary of above reports: - no PID readings found in two borings
around suspected location of gasoline UST at 420 carroll street site
- soil from only two sides of gasoline UST was screened - found
contaminated sludge in floor drain 2 at 420 carroll street site -
found SVOC contamination in soil sample (HTE-3) at 153 2nd street
site - found chlorinated compounds in soil sample (HTE-5) at 153 2nd
street site - found chlorinated compounds in groundwater sample
(HTE-1) at 153 2nd street site - found SVOC contamination in soil
samples (HTE-6, HTE-7 and HTE-8) at 430 Carroll street site - found
Xylene contamination in soil sample (HTE-8) at 430 Carroll street
site - found heavy VOC contamination in groundwater sample (HTE-6) at
430 Carroll street site - HTE-6 sample was taken in area of
aboveground waste oil tank and sump pit at 430 Carroll street site.
09/14/07-Hiralkumar Patel. left message for Mr. Mirski (BCP
applicant), for owner's information. 09/17/07-Hiralkumar Patel.
received email from Ms. Shaw stating that property is for sell.
09/26/07-Hiralkumar Patel. sent email to Ms. Shaw requiring property
owner's information. 09/28/07-Hiralkumar Patel. received property
owner's information from Ms. Shaw. property owner: Gowanus Village I
LLC. Attn.: Sara Mirski Boymelgreen developers 752 Pacific Street,

S106704100

abstract: - eight borings will be installed - four borings will be converted into permanent groundwater monitoring wells - borings will be installed to an anticipated depth of approx. 12 ft, refusal or groundwater table - two soil samples will be collected from each soil probe; deepest dry soil sample and sample with the highest PID - groundwater samples will be collected from soil boring, if contamination hit groundwater proposed boring locations are not in area where contamination found during earlier studies.

02/28/08-Hiralkumar Patel. sent site map with changes in proposed boring/well locations. asked Ms. Saha to submit revised work plan with modified map. spoke with Ms. Saha. she mentioned that they are planning to stick with 8 borings proposal from Langan. based on previous investigation reports, remove few boring locations from proposed plan. asked Ms. Saha to analyze groundwater for chlorinated compounds also as found some chlorinated compounds in previous study. also asked to trace end of floor drains at 420 Carroll street and to take soil/groundwater sample where floor drain ends (as found contaminated sludge in floor drain # 2). mentioned to Ms. Saha that proposed permanent well at location MW-4 is not necessary, but the department definitely requires soil and groundwater sample at boring SP#4 (at new location as shown in map) as it is downgradient from sump pit area (based on regional groundwater flow direction which is towards the west). sent another email to Ms. Saha with change in proposed boring/well locations. remove some proposed location, move some proposed locations and add some locations. asked to submit revised work plan by end of March 3, 2008. received revised work plan with following changes: - will install eight soil probes and one groundwater probe - if groundwater sample from probe found contaminated then convert boring to permanent well - will trace end of drains and will take soil samples at end of drains

02/29/08-Hiralkumar Patel. sent email to Ms. Saha and Mr. Katan, with work plan approval. asked to submit investigation report by April 4th, 2008. 03/20/08-Hiralkumar Patel. received call from Ms. Saha. they tried to install monitoring well near sump, but due to heavy rain they could not install. they will try next week. asked to extend deadline for report submission. approved Ms. Saha's request and asked to submit report by April, 14, 2008. 04/14/08-Hiralkumar Patel. received call from Ms. Saha. they finished investigation work except for one monitoring well at sump location. Ms. Saha mentioned that sump is filled with water and owner is waiting for tenant to empty that sump. asked Ms. Saha to contact owner regarding installation of well and submission of complete investigation report by next week. left message for Mr. Katan. 04/25/08-Hiralkumar Patel. received email from Ms. Saha. they have scheduled well installation next week and planning to submit complete report by May 10, 2008. sent email to Ms. Saha approving her request for deadline extension.

05/08/08-Hiralkumar Patel. received email from Ms. Saha. she will submit complete report by May 22nd, 2008. 07/01/08-Hiralkumar Patel. received investigation report from Hydrotech. abstract: - total of eight soil probes (SP-1 through SP-8) were installed - borings SP-1 through SP-4 were installed in 420 Carroll Street - boring SP-4 was installed in the vicinity of the inactive floor drain in the northeastern portion of the warehouse; end of this floor drain was traced and found to end at the city sewer line; due to proximity of the drain pipes to the main sewer line and building structures, no soil sample could be obtained from drain end (floor drain where found contaminated sludge during previous investigation) <----- -

soil probes SP-5 to SP-8 were installed at 430 carroll street - soil probe SP-8 was installed in the vicinity of the sump pit, located in the southwestern corner of the parking lot (where high VOC contamination found in groundwater, previous HTE-6 boring) <-----
- inactive floor drain indentified in the northern portion of the building during previous investigations could not be accessed due to debris, concrete rubble and a trailer in the vicinity - all soil probes were installed until clean soil or groundwater was encountered - soil probes SP-1, SP-2 and SP-7 were installed to a depth of 8 ft at which groundwater was encountered; soil probes SP-3, SP-4 and SP-8 were installed to a depth of 10 ft bg at which groundwater was encountered; soil probes SP-5 and SP-6 were installed to a depth of 12 and 13 ft respectively at which groundwater was encountered <-----
- no PID values found during soil probes - two deepest dry soil samples collected for analysis - one groundwater probe (GP-3) and three permanent 2-inch monitoring wells (MW-1, MW-6 and MW-8) were installed - MW-1 was installed to depth of 11 ft bg, MW-6 was installed to depth of 25 ft bg and MW-8 was installed to a depth of approx. 18 ft bg - no free product observed in any wells - wells and groundwater probes were sampled on following day - groundwater flow direction beneath the site is towards the West (map shows in northwest direction) <-----
- 16 soil (two from each borings) and 4 groundwater samples submitted for analysis - found SVOC contamination in all samples, but found high contamination in samples from borings SP-1 (at 2-4 ft), SP-3 (at 8-10 ft; highest) and SP-6 (at 6-8 ft) - highest SVOC contamination found in sample from 8-10 ft from soil probe SP-3 -----SP-3 (at 8-10 ft bg)-----limit
Naphthalene-----35,000-----13,000
Phenanthrene-----130,000-----50,000
Benzo(a)anthracene-----7,100-----224
Chrysene-----28,000-----400
Benzo(b)fluoranthene-----41,000-----1,100
Benzo(k)fluoranthene-----31,000-----1,100
Benzo(a)pyrene-----1,400-----61 -
found Naphthalene contamination in groundwater samples from wells MW-6 (290 ppb) and MW-8 (179 ppb) <----- summary of all available reports: - abandoned gasoline tank at 420 Carroll street - found contaminated sludge in floor drain #2 in 420 Carroll street during investigation in 1999 - found SVOC contamination in samples HTE-6, HTE-7 and HTE-8 during investigation in 2005 - found VOC contamination in groundwater from boring HTE-6, which was taken near waste oil AST location, in 2005 - found SVOC contamination in samples during recent investigation in 2008 - as per boring logs, found fill material in all boring logs - during recent investigation in 2008, found groundwater flowing towards the West (map shows in northwest direction) - based on recent groundwater flow direction, wells MW-6 and MW-8 are located at upgradient edge of the site, where Naphthalene contamination found - well MW-1 is located at downgradient edge of the site and no contamination found in this well; MW-1 is also downgradient from previous waste oil tank/sump pit location where high VOC contamination found in groundwater in 2005 07/02/08-Hiralkumar Patel. discussed with DEC Austin. based on previous and current investigation reports and based on location of the site (in industrial area), Austin asked to close the case. case closed. sent NFA to Mr. Katan. letter emailed to Mr. Katan and Yash.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 257452
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SUN" transfered from tang/sullivan to tibbe. see also 9314103 and 0306012 at the same location. 09/23/03 Transferred from Tibbe to Sun 10/01/03 Joe Sun of NYSDEC spoke to Jeff Bohlen of Envirotrac (Consultant to Verizon) regarding the removal of two (2)x4000 gallon FRP USTs, which are scheduled to be removed today, 10/01/03. J.Bohlen stated that they will take the end samples next Tuesday or Wednesday . He will call again to confirm the time and date for DEC people to be at the site to witness the soil sampling. 10/02/03- Sun- Faxed letter to John Quatralo of Verizon and Jeff Bohlen of EnviroTrac requesting the area to be excavated in conjunction with the tank removal activities currently progressing on site. Soil excavation will remove the source of the groundwater contamination, and accelerate the remediation of the spill site. Since source material exists under the sidewalk, an attached letter can be used to expedite the DOT permit acquisition. 10/03/2003-Sun-Spoke with John Quatralo of Verizon about excavation of contaminated soils at 318 Nevins Street. He stated that he agrees with DEC's recommendation to excavate the area on south side of Union Stret. Per DEC's request, Verizon will proceed to expedite the DOT permit acquisition immediately. We will meet next week at the site to further survey the facility when Envirotrac starts to take end samples. 10/7/2003-Sun & Vought visited the Verizon's site and met John Quatralo of Verizon and Jeff Bohlen of Envirotrac. At the time of our visit, one 4000 gallon gasoline FRP UST was already removed. Based on our discussion, Verizon will take one end sample for every twenty five (25) feet on each side wall and one ground water sample on the bottom of the tank. The extent of excavation will be based on the PID readings. The analysis of volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) will be performed using EPA Methods 8260 & 8270, respectively. Verizon will excavate another 4000 gallon fiberglass coated steel UST (diesel tank) on 10/9/2003. 1/5/06: Case reassigned to Andersen. Reviewed the quarterly report for April - June 2005. There is a strong decrease in contaminants by natural attenuation. Max BTEX 2,855 (MW8) and max MTBE 110 (MW 8 and 9). 1/12/06: Reviewed quarterly third 2005 quarterly report. Increase in contaminant concentration in the hotspot (MW-8 and MW12). Wait one more quarter and send and RAP required letter. Max BTEX 6,791 ppb (MW8) and max MTBE 145 ppb (MW8). 2/9/06: Reviewed fourth quarterly 2005 report. Fluctuating concentrations in MW-8. Max BTEX 3991 ppb and max MTBE 137 ppb. Sent RAP required letter. 4/6/06: RAP approved.

Two closed-in-place 2,000 gallon tanks will be removed and soil excavated. 4/27/06: Meeting with Verizon, NYSDEC, and EnviroTrac. Two closed in place tanks will be removed. There is old fill material and concrete remnants of old buildings in the ground. This site is adjacent to the Gowanus Canal. 5/4/06: Access letter sent to envirotrac for MTA permit. 5/11/06: Received first quarterly 2006 report. Excavation and tank removal planned for 5/15/06. Max BTEX 4,348ppb (MW8), max MTBE 61 ppb. 8/25/06: One 2,000 gallon diesel and one 2,000 gallon gasoline previously abandoned USTs were removed in May 2006. Impacted soil was removed to limits of excavation (tieback wall of gowanus canal and retaining wall). A petroleum sheen was seen in water in excavation and 838 gallons of was were removed with a vacuum truck. Two endpoint samples collected, no VOC exceedances, some sVOC exceedances. Two monitoring wells were installed in the excavation (MW16 and MW17). Groundwater sampled on 6/15/06. Max BTEX 3,806 ppb in MW8, max MTBE 27ppb in MW17. Third quarter 2006 gw sampling scheduled for September. 11/27/06: Received July - September 2006 update report. Wells sampled on 9/11/06. Max BTEX 5,164 ppb in MW8. Fluctuating gw concentrations. This is the second sampling event since source removal. An RAP may be required after next sampling event. 2/22/07: Reviewed update report. Wells sampled on 12/15/06. Max BTEX 1,648 ppb (MW8), max MTBE 46 ppb (MW17). Local treatment of MW8 may be required if it does not naturally attenuate. 5/24/07: RAP required for groundwater treatment of MW8. Due 7/5/07. 7/6/07: Received RAP for MNA until the end of 2007. "At that time, if the level of contamination warrants remedial action, the feasibility of chemical oxidation in the area of mw8 will be evaluated". 8/30/07: Reviewed update report. Wells sampled on 6/8/07. Max BTEX 833 ppb (MW8), max MTBE 120 ppb (MW17). MNA until fourth quarter 2007. 7/2/08 - Carlson: Reviewed January - March 2008 update report. Wells sampled on 3/26/08. Max BTEX 1,848 ppb (MW8). Report states a workplan will be submitted under a separate cover. Emailed Tom Bosshard - what is the expected workplan submittal date. 7/3/08 - Carlson: Received email from Tom Bosshard. RAP will be submitted by July 31, 2008. 8/6/08 - Carlson: Approved Remedial Work Plan for the use of Regenox. Regenox will be injected into four new injection wells in the sidewalk adjacent to wells MW8 and MW12. 8/7/08 - Carlson: Received email from John Quatral: "Labor negotiations are ongoing and the union is working without a contract since August 3, this may drag on for some time. That said, I am still trying to get the work done before the end of the month and will advise as to the actual scheduled date." 8/25/08 - Carlson: Received OMMP report dated 8/25/08. Injection well installation scheduled for 9/9/08. Received email from Tom Bosshard : "Please note that baseline monitoring for parameters outlined in the OMMP will be conducted during the third quarter ground-water sampling event, which will be conducted during the week of September 8th. We expect to conduct the RegenOx injection in late September or October, prior to the fourth quarter ground-water sampling event scheduled for December." Reviewed April through June 2008 Update Report. Wells sampled on June 20, 2008. Depth to water 4 - 9 ft. Maximum BTEX concentration 12,370 ppb (MW8). 10/17/08 - Carlson: Reviewed July 2008 - September 2008 Update Report. Wells sampled on 9/7/08. Maximum BTEX concentration 720 ppb in MW12. Six injection wells installed and Regenox injected in September 2008. Monitoring wells MW8 and MW12 will be sampled in October 2008 to evaluate Regenox effectiveness. 3/5/09 - Carlson: Reviewed October - December 2008 Quarterly Report. Regenox injected

in November. Spike in MW8 may be from dissolution resulting from Regenox. Regenox injection planned again in May 2009. 5/4/09 - Carlson: Reviewed update report. General decrease in contaminant concentrations. Another regenox injection planned in May 2009. 8/20/09 - Carlson: Reviewed April 2009 through June 2009 Update Report. A third injection event was performed in May 2009. BTEX, TVOCs are still high in MW8. 12/18/09 - Carlson: Reviewed update report. EFR planned on December 10 to recover contaminants desorbed by Regenox. 2/19/2010 - Carlson: Reviewed update report. EFR conducted in December 2009 prior to December sampling event. Impacted groundwater remains in MW8. Another EFR planned prior to March sampling event. 5/13/2010 - Carlson: Reviewed update report. EFR on 3/3/2010. Wells sampled on 3/30/2010. Low dissolved concentrations. Another EFR event planned prior to June sampling event. 8/27/2010 - Carlson: Reviewed April 2010 through June 2010 Update Report. EFR conducted from MW8. Spike in concentration in MW8. Quarterly EFR and groundwater sampling to continue. 11/9/2010 - Breen. July through September Update report received from Environrac. EFR extraction at MW-8 on 9-7-10. Next event scheduled for December. 2/17/2011 - Breen. Paper copy of October-December 2010 Update rpt received from Environrac. 08/08/11: This spill case transferred from G. Breen to J. Kolleeny. Reviewed Update Rpt for Jan. thru March 2011 by EnviroTrac, submitted on 5/9/11 (in eDocs). Rpt gives results of 3/29/11 GW sampling event. High levels of contam continue to persist in MW-8, which had 7,410 ug/L total VOCs (down from 13,031 ug/L in Dec. 2010). Off-site up-gradient well MW-11 had 343 ug/L tVOCs (up a little from 322 ug/L in Dec. 2010), and up-gradient on-site well MW-12 had 401 ug/L tVOCs, up from 320 ug/L in Dec. 2010; contam in both MW-11 and MW-12 is primarily benzene (320 ug/L benzene in MW-11; 400 ug/L in MW-12). Rpt states that EFR events will continue at MW-8 on regular basis, with next EFR event scheduled for June 2011, and GW sampling to be conducted 2 or 3 weeks after that. Spoke with Tom Bosshard of EnviroTrac, who mentioned they found an unknown monitoring well across Union St. from MW-8, and wondered if I knew who installed it and if it would be OK for them to sample it for add'l up-gradient GW data. I could not find a nearby open spill case, but told Tom I see no reason not to sample well. I suggested that they should measure depth to bottom of well and determine screened interval to make sure well will provide reliable data. He said they would. - J. Kolleeny

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Region: 2
DER Facility ID: 305096
DEC Memo: Delivery today to Monties Resturant in Brooklyn. Bottom of the tank has a pinhole leak PTC ((718) 624-4842; Anthony P. Lara) has been called and is at the site now pumping out the tank. 11/7/2005
Sangesland confirmed that PTC completed a surface cleanup of the site. PTC submitted a proposal to replace the tank. Unknown what the condition under the slab floor is. Hold open until the full basement area is checked or until subsurface has been checked. 12/8/05 - Raphael Ketani. I spoke to Anthony P. Lara of PTC. He said that PTC cleaned up the spilled oil and pumped out the two leaking 275 gal. tanks under the stairs. He gave an estimate to Frank Perone, the owner ((718)745-3576/(917) 805-6048), regarding what it would cost to remove the 2 tanks, replace them with one new 275 gal. tank, and do the below floor investigation. Mr. Perone told him he would get someone else. When I talked to Mr. Perone, he said that his brother had contacted Ferrantino Fuel ((718) 832-6700) for the below floor investigation. He said he would call me back regarding the extent of the oil spill investigation. I will send a "contaminated soil" letter to Mr. Perone at 1427 Bay Ridge Parkway, Brklyn., 11228-2212. 12/9/05 - Raphael Ketani. I called Ferrantino Fuel and spoke to one of the supervisors there. He said Ferrantino didn't do a below floor investigation and he had no information if one was ever planned. Mr. Joseph Orechio (one of the owners; (718) 745-3576) called me to say that PTC had cleaned up the spilled oil in the tank vault under the street. He said the vault walls are cobble stone with a cement floor. He said only about 2 gals. was spilled. Mr. Orechio said that he switched his oil company to Blue Diamond. I told him that a soil investigation still needs to be done. He said he would get someone to do it. Anthony Lara of PTC called me back. He said that Mr. Orechio told him to do the soil investigation. Mr. Lara said that he will do 5 borings. One at each corner and one in the middle. He will take end point samples and send me the analyticals. Mr. Lara doesn't know whether there are any cracks in the vault floor, but he said about 20 gals. had leaked from the tanks. 12/9/05 Ketani sent a "do work letter" 12/20/05 - Raphael Ketani. Anthony of PTC called me to say

RESTURANT/RESIDENCE (Continued)

S107416639

that Mr. Orechio declined his services for the soil investigation. I called up Mr. Orechio, but could only leave a voice mail message. 12/22/05 - Raphael Ketani. Mr. Issac Mungra of A. L. Eastmond & Son (718)378-7000 called to say that his company may be doing the soil investigation at the site. He will let me know if he gets the job, but first he has to inspect the tank vault. 12/28/05 - Raphael Ketani. I spoke to Mr. Mungra in person at another site. He told me that he plans to do one soil boring at each end of the tank and take soil samples at the bottom of the sump on the other side of the wall. I told him this would be sufficient for now. 6/21/06 - Raphael Ketani. Today I received a FAX from Isaac of Eastmond with a floor plan for the 3 borings that were taken, the analytical results for the soil samples, and a detailed description of what type of work was performed. The analytical results showed no contamination was present in the soil and the concrete floor was described as "solid with no indications of cracks or crevices." Isaac also called me to say that the 2 tanks were replaced with new ones. Based upon the above documentation, I am closing the spill case. clean up is in process.

DEC Memo: 04/28/08-Vought-See also spill #0800421. These notes from that spill #: 04/11/08-Vought-Off hours responder. Called and spoke to Steven Giumenta (917-299-3047) who owns building across street at 32 2nd Ave. Lot across street used for bus maintenance and parking and as per Giumenta, last night one of the busses was in accident with two cars on the lot releasing sewage, waste oil, and motor oil. FDNY was onsite night of 4/09 and again on 4/10. Sewers were affected and DEP was also onsite as per Giumenta. Giumenta has also had prior conversations with DEC Selvin Southwell from Water Unit regarding continual problem of poor housekeeping and hence discharge to Gowanus Canan. As per Giumenta puddles of product and ribbons also present. Puddles are on asphalt, concrete and soil. Vought provided email address to Giumenta and he will email pictures. Vought reviewed pictures and three puddles present of dark liquid, possibly concrete but no signs of spills requiring immediate DEC response. Also present in pictures is large AST. Vought called Mciz Corp and spoke to receptionist (Maria) and informed them of site visit and left message that DEC will performing a site visit this afternoon and DEC would

prefer to observe no violations. As per Giumenta site contact is:
Mciz Corp 15 2nd Ave, Brooklyn, NY 11215-2711 Phone: (718) 875-8200
SIC: Bus Charter Service, Except Local Line of Business: Bus Charter
Service-Nonlocal Contact Name: Jacob "JACK" Marmurstein Contact
Title: President DEC requires: 1)site visit 2)cc and discussion with
Selvin Southwell 3)possible contaminated soil letter upon DEC site
visit 4)PBS Registration of aboveground tank. Vought sent email of
above to Giumenta. 04/14/08-Hiralkumar Patel. visited site on
04/11/08. met Steven at site. he showed bus repair company at 15 2nd
ave, as source site. visited bus repair company and met James Carter.
Mr. Carter mentioned that he owns the property with other people.
found heavy sheen on water outside of repair shop, that was going
into city sewer system. asked Mr. Carter to clean that area. Mr.
Carter parked buses on open lot in front of his site. found one spot
of soil contamination under a bus (see pics on e-docs) and a water
pool with heavy sheen. found heavily contaminated soil near this
water pool and that is under a backhoe. this backhoe owned by C&A
Properties, who runs business at 110 5th St. spoke with Teddy (cell:
347-381-9811) at C&A Properties, asked him to remove contaminated
soil from area under the backhoe. found three aboveground waste oil
tanks at bus repair shop (PBS #: 2-456101). minor spills found inside
repair shop on concrete. found monitoring well across the street from
bus repair shop and in front of empty lot, which bus repair shop used
to park their buses. James Carter MCIZ CORP. 15 2nd Avenue Brooklyn,
NY 11215 PH. (917) 559-0491 Charlie Crystie **owner** C&A Properties
II, Corp. 110 5th STreet Brooklyn, NY 11215 PH. (718) 596-1151 Fax
(718) 246-0148 requirements for MCIZ corp: 1) cleanup of bus depot
entrance from where oil water coming out and going into city sewer,
2) cleanup under bus in parking lot requirement for C&A properties:
1) cleanup under and around backhoe 04/28/08-Vought-After further
discussion with DEC Patel Vought changed address of this spill from
original address of 31 2nd Ave to 3-25 2nd Avenue. Vought reviewed
pictures and DEC requires:1)Opening new spill on 2-14 2nd Ave (lot
across street from Bus yard where Bus was observed with contaminated
soil and one monitoring well was observed and also spill from backhoe
and contaminated soil 2)collection of endpoint samples from bus spill
excavation and also from backhoe excavation 3)CSL with repair of
waste oil tanks and registration of tanks for 3-25 2nd ave (Bus
repair building). Vought to send CSLs to: DEC requirements for 3-25
2nd ave are: 1)cleaning, repair and registration of waste oil AST
(pictures taken by DEC Patel show open hole in top of tank) and
excavation of soil and collection of endpoint samples from under bus
(owner is) 2)cc to NYCDOS and DEC Southwell 3)Registration of waste
oil tank: Fifteen Second Ave, LLC 5307 17th Avenue Brooklyn, NY 11204
and: James Carter MCIZ CORP. 15 2nd Avenue Brooklyn, NY 11215 PH.
(917) 559-0491 Vought sent CSL with one month due date and above
requirements to above addresses. DEC requirements for 2-14 2nd Ave
are: 1)opening of new spill number due to soil contamination from bus
leak and from backhoe leak observed by DEC Patel 2)excavation and
collection of endpoint samples from bus spill and from backhoe spill
and owner is 3)cc to NYCDOS and DEC Southwell. Letter to be sent to:
Mr. Renzo Ferrari Chief of Operations 125 Worth Street Room 823 New
York, NY 10013 Fax: (212) 442-8624 Ph: (646) 885-4540 Vought sent out
letter with above requirements and one month due date under new spill
#0850124. DEC Requirements for 110 South 5th Street (owner of
backhoe) are: 1)excavation of contaminated soil under backhoe and
collection of endpoint samples 2)cc to NYSDOS and DEC Southwell.

Letter to be sent to: Charlie Crystie **owner** C&A Properties II, Corp. 110 5th Street Brooklyn, NY 11215 PH. (718) 596-1151 Fax (718) 246-0148 Vought sent out above letter to Crystie under spill #0850124 with one month due date: 04/28/08-Vought-Spoke with NYSDOS Ferrari and he will send out Sanitation inspector to write violations for spill to bus company and backhoe company and will inform Vought of progress. See also spill #0800421 for spill at 3-25 2nd Avenue. 05/02/08-Vought-Received call from and spoke to NYSDOS Ferrari and he performed site visit and gave order to bus company to remove buses from lot. Ferrari will have his building maintenance manager call Vought to ask for soil excavation requirements. Vought received original letter sent to Charlie Crystie as returned and undeliverable. Vought called Charlie Crystie to confirm mailing address and Teddy Lewis confirmed that Crystie did receive DEC letter dated 4/28/08 via fax. 05/05/08-Vought-Received message from NYSDOS Al Mignone (cell:646-235-3183 office:718-334-9121 fax:718-334-9088). Vought called Mignone and left message to return call. Vought received call and spoke to Mignone and he will excavate soil and send in manifest. As NYCDOS will be performing excavation, no soil endpoint analyticals required due to relatively small areas of excavation however for spill closure, Department requires submission of waste manifest for soil. Vought faxed Mignone copy of pictures and Department letters. 01/29/09-Vought-Reviewed letter dated 7/2/08 from DOS Mignone and received on 7/9/08. "The soil in question was removed by AARCO Environmental Services Corp." "The bus company that was there is not occupying the lot and the lot has been totally fenced in". Disposal manifest shows disposed contaminated soil. Spill closed by Vought.

Remarks:

DEC Patel visited site on 4/14/08 and observed soil contamination under bus owned by 3-25 2nd Avenue (see also spill #0800421) and under a backhoe owners by 110 South 5th Street. Soil contamination significant enough to require endpoint samples as per DEC Patel.

DEC Memo: 6/16/06 - Raphael Ketani. I tried calling Mr. Marmurstei (718) 875-8200, but could only leave a message with his secretary. I tried him at home (718) 438-0333, but he wasn't there. I called his cell (917) 217-6277 and spoke to him. I told him I needed to know whether the spill was cleaned up and, if so, when I will receive the cleanup report. He said he wasn't aware of a spill, but he will contact his foreman and find out what happened. At 12:49PM, Mr. Braun called me up and asked when the oil spill occurred and what spilled. I told him that it happened on May 19 and that it was waste oil and fuel oil. He said he wasn't aware of this and that usually his crews clean everything up every day. He said he will investigate the problem and make sure it's cleaned up. Mr Braun said he will send me a report.
6/19/06 - Raphael Ketani. Mr. Braun showed up at the DEC office and handed me pictures of the buse garage. The garage appeared to be reasonably clean. Mr. Braun explained that he was there yesterday, 6/18, and saw that the crew had cleaned up the spill. The pictures Mr. Braun gave me show that at least some amount of cleaning took place. This appears to be a house keeping issue. Based upon the pictures Mr. Braun gave me, I am closing the spill case. 2-12-2009 Spill was reopened after a meeting with V. Brevdo and J. Urda due to new information. Spill was previously managed by Raphael Ketani. Spill was transferred to Alex Zhitomirsky on 2-10-2009 as per Vadim Brevdo. According to the report received from Roux on February 4, 2009, NYC DOS leased 1-25 second Ave. Brooklyn from One Second Ave. Corp, c/c Howard Levine from Sept. 1957 until November 17, 1995. This property was owned by One Second Avenue Corporation until it was transferred or sold to a new entity, Fifteen Second Avenue LLC, on February 10, 1998. The site is currently leased by a private bus

S107788289

company and operated as a maintenance and repair garage. This site was included in NYC DDC Consent Order - sp.#9614826. The site was investigated and remediated in 1997-2006 as part of NYC DDC Consent Order. MPE system was shut down 6-20-2006. Soil samples were collected from MW-19 on July 18, 1998. No VOC exceedances were recorded. SVOC compounds which do not match transmission fluid were found in soil samples collected from this well. Groundwater data from March 5, 2000, indicates no product or sheen in MW-19. Gauging records indicate that a disabled bus had been parked over well MW-19 between July 15, 2005 up until after December 9, 2005. On March 15, 2006, Roux found 0.16 foot of separate-phase transmission fluid. This well did not historically exhibit product, including the last time it was gauged by LiRo on July 15, 2005. On August 7, 2008 Roux encountered 0.29 foot of the free phase product. AZ 2-25-2009 CSL approved by V. Brevdo and J. Urda was sent to Jack Marmurstein at 15 Second Avenue, Brooklyn, NY by certified mail. AZ 2-22-2011 Consent Order was signed by DEC on Feb.14, 2011. AZ 9-8-2011 An e-mail was received from M. Goddick AKRF ph.914.949.7559:"Alexander, As a follow up to our discussion, the removal of the aboveground tanks is being scheduled to be completed within 30 days. Immediately following removal of the tanks, test pits will be excavated in the area of the tanks. If grossly contaminated soil is observed, it will be excavated to the extent practical for off-site disposal. No dewatering will occur during the soil removal activities; appropriate measures will be taken to protect the structural integrity of the building, including excavating in small sections and/or using a trench box, as warranted. If appropriate, observation/recovery wells will be installed in the excavation prior to backfilling. Endpoint samples will be collected in accordance with DER-10 requirements. The findings associated with the tank removal and investigation/remediation activities will be documented in the Remedial Investigation Work Plan (RIWP). The RIWP will also include a comprehensive investigation of the entire facility per the requirements of the consent order. The RIWP will be submitted to you within 60 days of today (November 4, 2011), as opposed to 30 days. As requested, the RIWP will be submitted in electronic format (pdf on CD-ROM). I will let you once the tank removal work is scheduled. In the meantime, please let me know if you have any questions or require additional information."AZ 9/9/2011 An e-mail was received from M. Goddick AKRF ph.914.949.7559:"Alexander, To clarify, yes, we will provide a hard copy of the work plan along with the electronic copy. As discussed during the subsequent call today, we will send you a brief work plan next week outlining the protocols for the test pit investigation, soil remediation, and end-point sampling at the time of the tank removal. The field findings and end-point sampling results would be included in the RIWP and would provide a basis for the need for further delineation (as part of future investigation work defined in the RIWP). We have a pending FOIL request to gain any information related to past spill investigation work at the site. We have a partial report prepared by Roux on behalf of NYCDOS dated February 4, 2009. This report discusses NAPL in certain wells, but did not include a site plan. If you could please email a site plan showing the existing wells with NAPL and/or a more complete report showing historic NAPL gauging records, it would be very helpful. As you suggested, if there are wells in close proximity to the tanks that contain NAPL, I agree that it would be prudent to excavate the area as part of the tank investigation/remediation work described

above." I forwarded a plan, made by LiRo with well locations dated March 2010, to M. Goddick. AZ 9-22-2011 An e-mail was received from M. Goddick:"AKRF met with the tank removal contractor (Gemstar), tank design consultant (JD2), and client at the site today to review logistics related to the tank removal and soil remediation. Work at the site will start on this upcoming Monday (9/26) and is expected to be completed by the end of the week (Friday-9/30). A tentative schedule of the field work is as follows: - Mon & Tue - Tank cleaning and removal, removal of the containment wall, saw cutting of concrete, set up of temporary drums with containment pallets for oil storage - Wed & Thur - Contaminated soil removal - Fri - Backfill excavation A brief scope of work describing procedures for the tank removal, soil excavation, end-point sampling, and reporting is attached. The attachment also includes a schematic depicting the targeted area for soil removal. Finally, the accessible wells were inspected and gauged today. Only one well, MW-19 (near the ASTs and historically contained product), contained product (0.2 feet). A table summarizing the well gauging results is included in the attachment. Liz Baird from my office (ebaird@akrf.com, cell: 917.613.5977) will be on-site to oversee and conduct the required sampling during the tank removal and soil remediation activities."AZ

pictures and three puddles present of dark liquid, possibly concrete but no signs of spills requiring immediate DEC response. Also present in pictures is large AST. Vought called Mciz Corp and spoke to receptionist (Maria) and informed them of site visit and left message that DEC will performing a site visit this afternoon, and DEC would prefer to observe no violations. Site contact is: Mciz Corp 15 2nd Ave, Brooklyn, NY 11215-2711 Phone: (718) 875-8200 SIC: Bus Charter Service, Except Local Line of Business: Bus Charter Service-Nonlocal Contact Name: Jacob "JACK" Marmurstein Contact Title: President DEC requires: 1)site visit 2)cc and discussion with Selvin Southwell 3)possible contaminated soil letter upon DEC site visit 4)PBS Registration of aboveground tank. Vought sent email of above to notifier. 04/14/08-Hiralkumar Patel. visited site on 04/11/08. met notifier at site who showed bus repair company at 15 2nd ave, as source site. visited bus repair company and met James Carter. Mr. Carter mentioned that he owns the property with other people. found heavy sheen on water outside of repair shop, that was going into city sewer system. asked Mr. Carter to clean that area. Mr. Carter parked buses on open lot in front of his site. found one spot of soil contamination under a bus (see pics on e-docs) and a water pool with heavy sheen. found heavily contaminated soil near this water pool and that is under a backhoe. this backhoe owned by C&A Properties, who runs business at 110 5th St. spoke with Teddy (cell: 347-381-9811) at C&A Properties, asked him to remove contaminated soil from area under the backhoe. found three aboveground waste oil tanks at bus repair shop (PBS #: 2-456101). minor spills found inside repair shop on concrete. found monitoring well across the street from bus repair shop and in front of empty lot, which bus repair shop used to park their buses. James Carter MCIZ CORP. 15 2nd Avenue Brooklyn, NY 11215 PH. (917) 559-0491 Charlie Crystie **owner** C&A Properties II, Corp. 110 5th Street Brooklyn, NY 11215 PH. (718) 596-1151 Fax (718) 246-0148 requirements for MCIZ corp: 1) cleanup of bus depot entrance from where oil water coming out and going into city sewer, 2) cleanup under bus in parking lot requirement for C&A properties: 1) cleanup under and around backhoe 04/28/08-Vought-After further discussion with DEC Patel Vought changed address of this spill from original address of 31 2nd Ave to 3-25 2nd Avenue. Vought reviewed pictures and DEC requires:1)Opening new spill on 2-14 2nd Ave (lot across street from Bus yard where Bus was observed with contaminated soil and one monitoring well was observed and also spill from backhoe and contaminated soil 2)collection of endpoint samples from bus spill excavation and also from backhoe excavation 3)CSL with repair of waste oil tanks and registration of tanks for 3-25 2nd ave (Bus repair building). Vought to send CSLs to: DEC requirements for 3-25 2nd ave are: 1)cleaning, repair and registration of waste oil AST (pictures taken by DEC Patel show open hole in top of tank) and excavation of soil and collection of endpoint samples from under bus (owner is) 2)cc to NYCDOS and DEC Southwell 3)Registration of waste oil tank: Fifteen Second Ave, LLC 5307 17th Avenue Brooklyn, NY 11204 and: James Carter MCIZ CORP. 15 2nd Avenue Brooklyn, NY 11215 PH. (917) 559-0491 Vought sent CSL with one month due date and above requirements to above addresses. DEC requirements for 2-14 2nd Ave are: 1)opening of new spill number due to soil contamination from bus leak and from backhoe leak observed by DEC Patel 2)excavation and collection of endpoint samples from bus spill and from backhoe spill and owner is 3)cc to NYCDOS and DEC Southwell. Letter to be sent to: Mr. Renzo Ferrari Chief of Operations 125 Worth Street Room 823 New

York, NY 10013 Fax: (212) 442-8624 Ph: (646) 885-4540 Vought sent out letter with above requirements and one month due date under new spill #0850124. DEC Requirements for 110 South 5th Street (owner of backhoe) are: 1)excavation of contaminated soil under backhoe and collection of endpoint samples 2)cc to NYSDOS and DEC Southwell. Letter to be sent to: Charlie Crystie **owner** C&A Properties II, Corp. 110 5th Street Brooklyn, NY 11215 PH. (718) 596-1151 Fax (718) 246-0148 Vought sent out above letter to Crystie under spill #0850124 with one month due date: 04/28/08-Vought-Spoke with NYSDOS Ferrari and he will send out Sanitation inspector to write violations for spill to bus company and backhoe company and will inform Vought of progress. See also spill #0800421 for spill at 3-25 2nd Avenue. 05/02/08-Vought-Received call from and spoke to NYSDOS Ferrari and he performed site visit and gave order to bus company to remove buses from lot. Ferrari will have his building maintenance manager call Vought to ask for soil excavation requirements. Vought received original letter sent to Charlie Crystie as returned and undeliverable. Vought called Charlie Crystie to confirm mailing address and Teddy Lewis confirmed that Crystie did receive DEC letter dated 4/28/08 via fax. 05/05/08-Vought-Received message from NYSDOS Al Mignone (cell:646-235-3183 office:718-334-9121 fax:718-334-9088). Vought called Mignone and left message to return call. Vought received call and spoke to Mignone and he will excavate soil and send in manifest. As NYCDOS will be performing excavation, no soil endpoint analyticals required due to relatively small areas of excavation however for spill closure, Department requires submission of waste manifest for soil. Vought faxed Mignone copy of pictures and Department letters. 07/07/08-Vought-Received call from and spoke to AL Mignon and soil was excavated and he sent in disposal manifests and small letter of explanation. Property was fenced in and bus company was evicted from site. 3/19/10-Vought-Reviewed notes and due to excavation of contaminated soil from lot across street from site as per discussion with DOS Mignon 5/5/08, spill closed by Vought. Spill is coming from the house across the street. Home heating oil is on the sidewalk. No contact with the homeowner since this morning.

WHOLE FOODS SITE
220 3RD ST AND 360 3RD AVE
BROOKLYN, NY 11215

BROWNFIELDS **S106704101**
N/A

Site 4 of 5 in cluster J

Relative:
Lower

BROWNFIELDS:

Program: BCP
Site Code: 333299

Actual:
11 ft.

Site Description: Location: The Whole Foods site is located in the vicinity of the intersection of 3rd Street and 3rd Avenue in Kings County, NY. Site Features: The site consists of approximately 2.155-acres. The site is fenced and is bordered on the south by 4th Street Basin (Gowanus Canal), on the north by 3rd Street, on the west by privately owned real property, and on the east by 3rd Avenue. Current Zoning/Uses: The property is zoned as medium manufacturing in a commercial area. The site is currently owned by 190-220 Third Street Store, LLC and is vacant. The surrounding parcels are currently used for a combination of mixed light industrial, commercial and residential. The closest residential area is believed to be on 4th Avenue. Historical Uses: The subject site formerly consisted of several interconnected buildings and an open rear area that bordered the Gowanus Canal. The buildings prior uses that appear to have led to possible contamination include a coal yard, oil company, and junkyard and auto repair business. All buildings have been demolished. Site Geology and Hydrogeology: The Site is underlain by urban fill that varies in thickness from approximately 5 feet to 25 feet. The urban fill is underlain by an organic layer composed of varying proportions of silt and clay that varied in thickness from approximately 10 feet to 25 feet. The top of the organic layer likely represents the original surface of the Site, prior to filling in the late 1800s. The organic layer is underlain by a mixture of fine to coarse sands with increasing percentages of gravel and coarser sands with depth (coarsening downward sequence). Exploration borings were advanced to a total depth of approximately 77 feet below grade. The bedrock surface was not encountered in any of the test borings. Shallow groundwater is present in the overburden fill material beneath the Site. Groundwater is tidally influenced, but generally flows toward the 4th Street Basin in both high and low tide conditions. The groundwater level within the overburden aquifer ranges from an elevation of approximately 3 feet at the northwest boundary of the site to an elevation of approximately 8 feet in the southeast boundary of the site.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were associated with historic fill material, including semi-volatile organic compounds (specifically PAHs) and metals. Residual contamination at site will be managed in accordance with the Site Management Plan to insure compliance with all the institutional/engineer controls required by the environmental easement.

Health Problem: Since some contaminated soils remain at the site below clean backfill, people will not come in contact with contaminated soils unless they dig below the surface. People are not expected to come into direct contact with contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into

Map ID

S106704101

the indoor air of buildings is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants of concern due to vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Remarks: DEC Sigona) responded on 8/6/1999 at 3:00 P.M. found six drums left in front of 34 2nd Avenue near 5th Street, Brooklyn. There were 2-3 drums containing waste oil. Facility performs bus repairs Video Tours). According to John Gibbons the property manager, the facility was former sanitation garage. There were fill pipes for diesel and gasoline. The tanks were allegedly closed in-place. There are several groundwater wells present which are being monitored by DDC. There are active 2-275 gallon AST waste oil tanks at 15 2nd Ave and 1-275 gallon AST waste oil tank at 34 2nd Ave Satellite facility). The facility had very sloppy housekeeping. Facility manager agreed to remove and dispose of the drums of waste oil. Also, DEP Keith Williams) issued violations for illegal discharge of sanitary waste to soils adjacent to facility. DEC Sigona) conducted follow-up inspection on 8/17/1999 with ECO Michael Jordan) at 3:00 P.M. and found the six drums were moved to back of lot at 34 2nd Ave. They apparently spilled about 25-50 gallons of waste oil under one of the parked buses which spilled under the bus and onto the adjacent land outside of the fence area to the south of the property. M. Jordan took photographs. DEC Sigona) directed the bus facility manager John Gibbons) to hire a contractor to cleanup the spilled waste oil and dispose of the drums. Also, there was oil spilled on the roadway in front of 15 2nd Ave where buses were parked and being worked on. DEC Sigona) ordered Gibbons to cleanup the

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description:	This site was formerly owned by the Brooklyn Union Gas Company, which operated a coal gasification plant. It is believed that products from previous operations may have been disposed at this site. The site is currently vacant and located in a mixed industrial/residential area. Single family homes and a concrete product manufacturing plant are adjacent to the site. At one time, residential housing was proposed for construction at this location. The lot is littered with debris piles, cinder blocks, old lumber and at least fourteen 55-gallon drums embedded in concrete. The NYSDEC has received the final Phase II site investigation report, but is awaiting the analytical results of the sampling of the 55 gallon drums disposed on site. These drums were sampled separately in December 1990. Analytical data for the 3 drums sampled in 1990 revealed that the waste present in the drums originated from a petroleum hydrocarbon source and is not classified as hazardous waste.

DEC Memo:

Ketani responded to the site. 7/6/11 - Raphael Ketani. I arrived at the site at about noon time. The site was a large yard with a gray building on the back left corner that fronts on Nevins Street. The address is 242 Nevins Street (near Degraw and Nevins), Brooklyn, 11217. Several companies had their signs on the corrugated fence. These companies were Brooklyn Truck & Equipment, Phoenix Services Corp. (718) 567-2023, and Cole Partners, Inc. (718) 875-8300. I entered the yard and saw a red painted trailer (possibly with a cement pump) on the left that had been leaking hydraulic fluid. The floor of the front half of the yard appeared to be partially paved and partially laid with paving stones. There was a steel plate in one

location with holes in it. Vehicles were parked on both sides of the front half of the yard, but I did not see any leaks. Next, I went to the back half of the yard. The ground appeared to be only dirt. There were vehicles and construction machines parked along the west side and north edges of the yard. The Gowanus Canal bordered the west side of the yard and the water level was nearly even with the yard (maybe 3 feet below ground level). Most of the trucks belonged to two different garbage carting companies, M&G Carting, 303 5th Avenue, NY, 10016, (212) 689-0332, and Flash Recycling, 132 Ludlow Street, NY, 10002, (212) 673-6194 (Prince Street Station, P.O. Box 515, NY, 10012). Some of the trucks had leaked either motor oil or hydraulic oil. There was oil on the ground near one of the Flash Recycling trucks. One of the M&G Carting trucks looked like it hadn't been operational for a long time. There was a rolling container near this truck with many plastic bottles that had contained motor oil. I didn't see any leaking from the container, but this was not a proper container for liquids of any kind. After my tour of the back half of the yard, I entered the gray building. In many places, there was oil on the floor. I saw a zipper drain that looked like it may contain sludge. I entered the office of Brooklyn Truck & Equipment and met ECO Jennifer Okonuk (718) 482-4885 and the owner of the business, Bob Hepplewhite (718) 237-7976. ECO Okonuk informed me that she had called in the spill. She had been making inspections of garages when she came across Brooklyn Truck & Equipment. She said that she had issued two tickets to Mr. Hepplewhite, for noisome and unwholesome. Mr. Hepplewhite, ECO Okonuk and myself toured the garage. ECO Okonuk pointed out the area with oil saturated Speedi Dri next to a 275 gal. waste oil tank and a 275 gal. tank that Mr. Hepplewhite said contained fresh motor oil for the trucks. One of the workers at the garage dug through the Speedi Dri and showed us that there was a concrete floor below. I pointed out to Mr. Hepplewhite that there were containers of motor oil on racks in the back of the oil contaminated area. He said that these weren't his and that they were empty and had been there since before he had moved his business in. Mr. Hepplewhite added that the oil tank next to them also wasn't his and he knew nothing about it. Next, we went outside to the yard. I asked Mr. Hepplewhite about the trucks. He said that he makes extra money by leasing space for parking the trucks. I pointed out the spilled oil, the rolling container with oil bottles, and the derelict truck. I told him that he had to inform M&G Carting and Flash Recycling and get them to clean up the site and remove the oil bottles and the derelict leaking truck (ECO Okonuk claimed it was leaking). He said that he will do this. ECO Okonuk and I asked about the steel plate in the back half of the yard and the perforated steel plate in the front half of the yard, and whether he leased both halves. Mr. Hepplewhite said that he leased only the gray building and the back half of the yard. He added that the plates covered sewer tanks. He went on to say that when it rains, the entire yard floods 8 to 10 inches because the sewers back up under the street. Mr. Hepplewhite added that even the Gowanus Canal floods during the rain storms and spills into his yard. The yard and the vicinity is a low area. ECO Okonuk told me that she has seen this happen, too. He also stated that the building to the south can not be sold because there is oil underground from the coal gasification that took place many years ago. Mr. Hepplewhite commented that the EPA and the NYC DEP did borings throughout the yard and elsewhere because of the underground contamination. While we were in the yard, Andrew Kelly, enforcement

S105841715

officer - Emergency Response Engineer with the ER Unit (718) 595-4761 of the NYC DEP arrived. We went back inside the shop and I went over what needed to be done to clean up the site. These items were: 1) clean up the saturated Speedi Dri and make sure fresh absorbent is kept at this location for any future spills that take place 2) hire an environmental company to do soil borings in the saturated area, along the sides of the zipper drains and in the back half of the yard - if contamination is found, then it will have to be cleaned up 3) call M&G and Flash and have them clean up their spills 4) clean up the floor of the garage and have someone keep on top of the spills with absorbent and power washing (Mr. Hepplewhite stated that the garage is powerwashed once a month) 5) hire a company to clean out the zipper drains (Mr. Hepplewhite said that there is a plug at the end of the last zipper and that nothing can flow to the sewers) I told Mr. Hepplewhite that the DEC will be sending a contaminated soil letter to him and to the owners of the property with a C-c to ECO Okonuk. I added that we will want a clean up report after everything is done. Mr. Hepplewhite said that he understood. There was one other spill case for the site. It was #0510846. It involved a 200 gal. oil spill to the yard and the street and the sewer on 12/16/05. Bonafide Energy was the responsible party. A valve had broken. The site was cleaned up by 4/21/06 and the case was closed. 7/8/11 - Raphael Ketani. I tried contacting M&G Carting (212) 689-0332 to let them know that they have to clean up the spilled oil around and under their trucks. However, I reached the answering machine of Frank Mormando. I left a message for him to contact me. I contacted Billy Huang, the owner of Flash Recycling (212) 673-6194. I told him that he had to clean up the spilled oil from under and around his trucks and the pool of stinking leachate. He said that he will get one of his crew to do this. I told him that the oil has to be put in an appropriate container for oil disposal and that the DEC will do an inspection next week to see whether he has complied with our request. I added that if the oil and leachate aren't cleaned up, then he could face fines and penalties. Mr. Huang said that the oil and leachate will be removed. I looked up the property ownership using ACRIS. The latest deed for block and lot 418 and 1 is held by 242 Nevins, Inc., 444 Third Avenue, Brklyn, 11215. The deed date is 7/27/05, it was prepared on 10/5/05, and filed on 1/12/06. The property manager is Marino Mazzei, Bonified Realty, 140 Portland Road, Highland, NJ, 07732, (718) 788-2222. I spoke to Mr. Mazzei and told him about the leaking red painted trailer, the leaking trucks and the spills at Brooklyn Truck & Equipment. I told him that Mr. Hepplewhite will take care of the spills in his garage and that the trucking companies have been notified about the spills from their trucks. Mr. Mazzei said that he will visit the site and see to it that everything is cleaned up. I sent a CSL to 242 Nevins, Inc. regarding the hydraulic fluid that is leaking from the red trailer and the leaking trucks. Another CSL went to Mr. Mazzei regarding the same issues. I also sent Mr. Hepplewhite (718) 237-7976 and Mr. Mazzei CSLs with the 5 items from above. Later, Mr. Mormando, the owner of M&G Carting (212) 689-0332, called me back. He said that he will clean up the spill under and around his trucks and he will have the rolling container emptied. 7/12/11 - Raphael Ketani. Mr. Mazzei cell (347) 231-6440 called. He said that everything that the DEC was concerned about in the garage and in the yard has been cleaned up. He invited me to check the place. I told him that I will this week. However, I added that Mr. Hepplewhite still has to hire an environmental company to do soil

borings in the former oil saturated area and along the sides of the zipper drains. He said that he understood. 7/19/11 - Raphael Ketani. The CSL to 242 Nevins Inc. was returned in an unopened envelope as ATTEMPTED - NOT KNOWN. 8/5/11 - Raphael Ketani. I made an unannounced site visit. The oil spill under the red trailer had been cleaned up. The small oil spills next to and around the garbage trucks had also been cleaned up. The small rolling trash dumpsters (about 1.5 cu. yds. each) had been emptied. I met Mr. Hepplewhite. He showed me the area inside the garage that had been badly affected by spilled oil. He said that the oil was actually on sheets of plywood, not on the garage floor. This appeared to be true as most of this area of the garage floor was very clean as if there had never been oil tanks here. It was cleaner than it could have been if someone had power washed the floor. All of the tanks and buckets had been removed. However, I did see a darkened corner of this area next to the racks which used to hold containers of oil. I knelt down at this corner, but didn't sense any oil odors. I assumed the darkening to be the result of moisture as it had rained heavily earlier during the week and the corrugated walls were not sealed to the floor. There still were mud puddles in the backyard where the garbage trucks were. Next, he showed me the new location of the waste oil tank. It was now in a larger tank which served as secondary containment - should any of his workers spill oil while transferring it to the tank. The tank was in between the two back garage doors. Mr. Hepplewhite showed me the zipper drains. They were now covered by steel plates which fit flush with the garage floor. The plates had holes so that wash water can enter the drains. He lifted up one plate and I could see the concrete bottom of the drain. There were no odors and the bottom of the drain looked to be in good condition without any cracks. Lastly, he showed me the drums of sediment that had been removed from the drains. The lids were securely attached to the drums and they looked to be ready for pickup. Mr. Hepplewhite said that the person who runs the waste oil pickup company will arrange for the drums to be picked up. I looked at the floor of the shop and it was very clean, except for a small puddle under one engine. This engine had just been drained. I pointed this out to Mr. Hepplewhite and he said that the spill will be cleaned up immediately. After this, I left. As the former waste oil tank area was very clean and as the zipper drains didn't smell as if they had oil and were in good condition, I decided that soil borings weren't necessary at the site. As the spills appeared to have been remediated, I have determined that there is no threat to the public or the environment. Therefore, I am closing the spill case. DLE had issued tickets. So their case will remain active.

Remarks:

The whole ground of the garage is saturated. Been dumping there for 6 years. No clean up as of yet.

DEC Region: 2
DER Facility ID: 247328
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND" 8/23/99 - Sangesland spoke with owner "Miki". She said she is trying to sell the building and the tank failed. She is taking the tank out and switching to gas heat. She has hired D&D Plumbing & Heating (718-436-6698) to remove the tank and switch to gas. Sangesland told Miki to call the DEC 1 or 2 days before work will be done. DEC needs to see the hole after the tank is removed and before it is backfilled. 9/1/99 - Jim from State Environmental said he opened the tank and tested the tank and the lines seperate. He found the problem in the neck of the tank. There was a bad weld, but since it was on the top of the tank there was no leak of oil to the ground. He saw no evidence of soil contamination in the area that was dug away. Sangesland asked him to submit a statement saying 1) The tank past the soundness test, 2) The problem was a weld line in the neck of the tank, 3) no contamination was found. Sangesland gave permission to close out the tank in place. The building is being converted to natural gas heat. 9/22/99 State Environmental sent an affidavit saying no contamination was found and the site is clean.
Closed

DEC Region: 2
DER Facility ID: 82010
DEC Memo: 3/14/03 REASSIGNED FROM SULLIVAN TO VOUGHT. 10/27/03 Also see spill # 0307900. 11/25/03 Reassigned from Vought to Foley. 11/25/03 Received Delta Dispenser Upgrade Report dated 11/10/03 on 11/17/03. Lab analysis of post-ex soil samples collected from beneath four dispensers identified VOC concentrations in excess of TAGM 4046 soil cleanup objectives in three dispenser locations (D-1, D-2, D-3). Delta will delineate the soil impacts beneath the product dispensers. 4/19/04 Received SHAR. On 3/17/04, four borings were advanced by Geoprobe in the vicinity of the dispensers. DTW 13-20'bgs. Nine soil samples were collected at the depth interval exhibiting the highest PID reading or immediately above the water table. SB-1 (3.5-4.5'), SB-1 (17-18'), SB-2(19-20'), SB-3(2.5-3.5'), SB-3 (12-13'), SB-4(2.5-3.5'), SB-4(7-8'), SB-4(12-13'). Analysis by 8260 showed hits for VOCs above cleanup levels in five of nine soil samples in all four borings. Total BTEX conc ranged from ND (SB-1, 3.5-4.5' and SB-2, 3.5-4.5') to 1,076,900ppb in SB-4(12-13'). The four borings were converted to 1" temporary wells. Four groundwater samples were collected and analyzed for VOCs. DTW 18-24'bgs. MWs were advanced to 23-26'bgs. Temporary wells were removed. No LNAPL was detected. Total BTEX ranged from 3,732ppb (MW-1) to 45,380ppb(MW-4). Total VOC range from 17,061ppb(MW-2) to 69,062ppb(MW-1). MTBE ranged from 9,050ppb(MW-4) to 64,600ppb(MW-1). 12/21/04 4Q04 report received(samples collected 11/23/04). BTEX ranged from 38ppb(MW-5) to 38810ppb(MW-4). MTBE ranged from 33ppb(MW-5) to 174000ppb(MW-1). DTW approx 12-15'bgs. 6/28/04 Investigation report received. On 4/23/04, one 1" well(MW-3) was installed through existing soil boring SB-3 and one 2" well(MW-4) was installed through previously advanced soil boring SB-4. Wells were advanced to 25.5 and 26.5' respectively. GW was encountered at 17.15'bgs in MW-3 and 17'bgs in MW-4. No soil samples collected due to previous investigation. On 5/24/04, three 2" wells (MW-1, MW-2, MW-5) were installed to 24', 20', and 20' respectively. GW encountered at 11.7' and 16.8'bgs. Four soil samples were collected. Hits for VOCs in SB-5/MW-2(10-11'), SB-5/MW-2(12-13'). On 5/28/04, five GW samples were collected. GW was identified at 11'-14.5'bgs. Flow was interpreted as NW. BTEX ranged from 74ppb(MW-5) to 45550ppb(MW-4). MTBE from 19ppb(MW-5) to 192000ppb(MW-1). 9/30/04 3Q04 monitoring report received. BTEX from 57ppb(MW-5) to 39150ppb(MW-4). MTBE from 17ppb(MW-5) to 164000ppb(MW-1). DTW 11-14'bgs. Need to delineate downgradient and sidegradient. 3/10/05 Received 1Q05 monitoring report. BTEX ranged from 65ppb(MW-5) to 38730ppb(MW-4). MTBE from 12ppb(MW-5) to 204000ppb(MW-1). 3/15/05 Issued sidewalk permit letter to install three MWs along the west sidewalk of 4th Ave. 3/15/05 Stip issued. Due 4/29/05. 4/21/05 Received stip signed by C. Wein on 4/19/05. 4/27/05 Portfolio meeting- Vadose and saturated soil impacts at northern border and SW portion of property. PS #51 300' NW. Impacts across street(total BTEX 100ppb). Service station and taxi stand on

Sanborns for property across street. 4/28/05 Stip executed by T. Kunkel. An Investigation Summary report is due 6/27/05. RAP due 8/26/05. 6/13/05 Received subsurface hydrocarbon assessment report dated 6/7/05. MW-6,7,8 installed off-site. Soil results show impacts at MW-7(11-12'bgs & 15-16'bgs). Adjacent to U-Haul and Taxi Stand with garage. Total BTEX in GW was 1ppb(MW-6), 272ppb(MW-7) and ND(MW-8). MTBE concentrations were 2ppb(MW-6), 3ppb(MW-7) and 13ppb(MW-8). 6/24/05 Received Investigation summary report dated 6/22/05. On-site vadose zone soil impacts in and around dispensers are from historical release. Elevated MTBE concentrations in MW-1 and MW-2 may be related to more recent release. This is also supported by analysis of BTEX ratios. Off-site soil and GW impacts were detected across 4th Ave at MW-7 and MW-8, which appear to be from U-Haul or taxi stand(impacts as shallow as 11'bgs). 9/6/05 Received well installation report documenting installation of EW-1, MW-9 and MW-10. MPE pilot conducted 8/16/05. Pilot test feasibility report to be submitted. 12/30/05 Received 3Q05 monitoring report. DTW 11.37-14.90'bgs. BTEX ranged from ND(MW-8) to 50320ppb(MW-4). MTBE ranged from 5.1ppb(MW-6) to 170000ppb(MW-1). 2/23/06 Received letter from Delta requesting extension to stip and summarizing MPE pilot test results which was conducted in 8/05. Since 8/05, Delta has tried to identify an appropriate remedial alternative to address site impacts within the vadose, smear and saturated zones on-site. On 11/4/05, Delta sampled on and off-site wells for geochemical parameters and stable carbon isotope ratio analysis. Delta is currently reviewing the results as they relate to the potential use of aerobic stimulation(sparging). Request extension to submit RAP by 5/14/06. 3/9/06 4Q05- DTW 11.96-14.63'bgs. BTEX ranged from ND(MW-8) to 44200ppb(MW-4). MTBE ranged from 1ppb(MW-8) to 81900ppb(MW-10). 3/16/06 Met with BP and Delta. MW-6,7,8 installed in 4/05. Pilot for MPE completed in 8/05 which determined it is not an option. Geochemical sampling completed 10/05 which showed no degradation. DTW 11.5-14.5'bgs. Very high MTBE concentrations. Sensitive receptors include utility vaults along 4th Ave. Delta was planning to submit biosparge proposal. Vic Kremesec, BP, requested Delta look into something more aggressive. 5/9/06 Received feasibility pilot testing and analysis report for Multi-Phase Extraction and a Remedial Action Plan. 6/8/2006 - Feng - project reassigned to RJFeng. (RJF) 7/28/2006 - Feng - Quarterly Monitoring Report, 1Q2006, 6/6/2006, submitted by Delta. As of sampling on 3/6/2006, groundwater flows to northwest at the depth of 10.89' to 15.17' bg. 11 monitoring wells. W-1, 9,350 ppb BTEX (3,410 ppb B, 1,050 ppb T, 1,480 ppb E, 3,410 ppb X), 21,100 ppb MTBE. W-2, 2,840 ppb BTEX (1,170 ppb B, 163 ppb T, 811 ppb E, 696 ppb X), 3,330 ppb MTBE. W-3, 20,990 ppb BTEX (3,070 ppb B, 6,800 ppb T, 2,120 ppb E, 9,000 ppb X), 10,400 ppb MTBE. W-4, 38,920 ppb BTEX (4,400 ppb B, 17,300 ppb T, 3,220 ppb E, 14,000 ppb X), 33,500 ppb MTBE. W-5, 35.4 ppb BTEX, 4.6 ppb MTBE. W-6, 1.42 ppb BTEX, 4.6 ppb MTBE. W-7, 677 ppb BTEX (22.8 ppb B, 8.9 ppb T, 304 ppb E, 341 ppb X), 8.1 ppb MTBE. W-8, ND. W-9, 16,780 ppb BTEX (2,180 ppb B, 1,890 ppb T, 2,210 ppb E, 10,500 ppb X), 14,200 ppb MTBE. W-10, 17,760 ppb BTEX (3,810 ppb B, 3,180 ppb T, 2,890 ppb E, 7,880 ppb X), 44,900 ppb MTBE. EW-1, 12,180 ppb BTEX (2,110 ppb B, 1,780 ppb T, 1,940 ppb E, 6,350 ppb X), 8,260 ppb MTBE. (RJF) 8/1/2006 - Feng - Remedial Action Plan, 5/8/2006, submitted by Delta Environmental. Delta proposed MultiPhase Extraction System to be installed to address FP, soil vapor and gw contamination. Delta conducted pilot test twice. The 1st time it was concluded that "The results of this MPE pilot event

Site

Database(s)

EDR ID Number
EPA ID Number

AMOCO (Continued)

S106126142

conflicted with the expected response from the site's lithology". During the 2nd pilot test, 5 air samples collected at specific intervals to quantify specific vapor VOC concentration being removed. The recovery rates are 0.19 lb/hr BTEX, 0.091 lbs/hr MTBE, 4.89 lbs/hr TPH. For the groundwater drawdown reading, W-9 at 0.28' which located 5 feet away from EW-1. Delta explained that "The limited groundwater drawdown ROI from extraction well EW-1 is likely due to the more transmissive subsurface soils which allow more significant groundwater recharge into the cone of depression generated by MPE operation at the extraction well EW-1". The system components included 4 extraction wells, phase separator, liquid ring pump, system control panel, for vapor and liquid treatment are being designed. System flow chart is provided. By running the MPE, there is better hydraulic control and source removal. RAP is approved conditionally: 1) add the air exhaust in the system flow chart. 2) reinstall the MW-1, MW-3 and MW-4 due to their screen interval starts at the water table or below the water table. 3) Investigate the impact to the subway tunnel right next to the station (N, R and F trains run along 4th Ave). (RJF) 8/2/2006 - Feng - Approval of MPE letter sent to BP and cc to Delta. (RJF) 9/26/2006 - Feng - Quarterly Monitoring Report, 2Q2006, 9/7/2006, by Delta. Sampled and monitored on 6/19/2006. DTW 10.60' to 14.42' bg, flows to northwest. 10 of 11 monitoring wells were sampled. MW-2 was not accessible. MW-1, 8,012 ppb BTEX, 28,200 ppb MTBE. MW-3, 16,430 ppb BTEX, 8,540 ppb MTBE. MW-4, 37,250 ppb BTEX, 32,400 ppb MTBE. MW-5, 59.1 ppb BTEX, 5.4 ppb MTBE. MW-6, 0.25 ppb BTEX, 2.8 ppb MTBE. MW-7, 569 ppb BTEX, 6.1 ppb MTBE. MW-8, BTEX ND, 0.71 ppb MTBE. MW-9, 10,688 ppb BTEX, 4,620 ppb MTBE. MW-10, 21,300 ppb BTEX, 63,500 ppb MTBE. EW-1, 8,055 ppb BTEX, 5,250 ppb MTBE. (RJF) 9/28/2006 - Feng - Portfolio meeting with BP and Delta. Plan changed for this site. On 8/2006, Delta had the plan in place for redevelopment and construction of high rise building. There will be multi-story basement, USTs will be pulled and additional soil will be removed. Construction schedule will be confirmed and remedial plan will start from the groundwater quality after tanks removal. (RJF) 3/6/3007 - Feng - 3Q2006, 12/21/2006. Groundwater sampled and gauged 9/13/2006. 11 monitoring wells were sampled. DTW 10.68' to 14.36' bg. Flows northwest. LNAPL in MW-9 (0.12'). MW-1, 9,350 ppb BTEX, 21,100 ppb MTBE. MW-2, 2,840 ppb BTEX, 3,330 ppb MTBE. MW-3, 20,990 ppb BTEX, 10,400 ppb MTBE. MW-4, 38,920 ppb BTEX, 33,500 ppb MTBE. MW-5, 35.4 ppb BTEX, 4.6 ppb MTBE. MW-6, 1.42 ppb BTEX, 4.6 ppb MTBE. MW-7, 677 ppb BTEX, 8.1 ppb MTBE. MW-8, ND. MW-9, 16,780 ppb BTEX, 14,200 ppb MTBE. MW-10, 17,760 ppb BTEX, 44,900 ppb MTBE. EW-1, 12,180 ppb BTEX, 8,260 ppb MTBE. Email Delta for status on tank pull, site development and RAP. (RJF) 3/6/3007 - Feng - Updates from D. Greffenius (Delta), the USTs, piping, and dispenser removals will begin on Monday, March 12, 2007. Alvin Petroleum is the contractor. 3/6/2007 - Feng - email from D. Taylor (Delta), USTs will be removed and endpoint samples will be taken and Closure report will be submitted. Delta are currently in touch with the site owner who hasn't yet provided the development schedule. (RJF) 7/24/2007 - Feng - 4Q2006, 4/30/2007. Groundwater sampled 12/7/2006. All 11 monitoring wells were sampled. DTW 10.42' to 14.17' bg. Flows to northwest. No LNAPL. MW-1, 7,750 ppb BTEX, 9,800 ppb MTBE. MW-2, 2,754 ppb BTEX, 1,340 ppb MTBE. MW-3, 10,370 ppb BTEX, 5,350 ppb MTBE. MW-4, 31,030 ppb BTEX, 14,300 ppb MTBE. MW-5, 47.7 ppb BTEX, 4.4 ppb MTBE. MW-6, 1.94 ppb BTEX, 4 ppb MTBE. MW-7, 650 ppb BTEX, 4.7 ppb MTBE. MW-8, BTEX ND, <1 ppb MTBE. MW-9, 9,510 ppb

BTEX, 3,630 ppb MTBE. MW-10, 17,180 ppb BTEX, 15,900 ppb MTBE. EW-1, 9,850 ppb BTEX, 3,640 ppb MTBE. (RJF) 7/27/2007 - Feng - 1Q2007, 5/7/2007. Groundwater sampled 3/7/2007. 9/11 monitoring wells were sampled. DTW 11.51' to 14.6' bg. Flows to north-northwest. No LNAPL. MW-1, 6,936 ppb BTEX, 4,930 ppb MTBE. MW-2, 2,820 ppb BTEX, 632 ppb MTBE. MW-3, not accessible. MW-4, 40,800 ppb BTEX, 34,800 ppb MTBE. MW-5, well not located. MW-6, ND. MW-7, 468 ppb BTEX, 3.1 ppb MTBE. MW-8, ND. MW-9, 9,160 ppb BTEX, 2,230 ppb MTBE. MW-10, 24,490 ppb BTEX, 7,960 ppb MTBE. EW-1, 10,430 ppb BTEX, 2,460 ppb MTBE. (RJF) 7/31/2007 - Feng - Underground Storage Tank Excavation Assessment Report, 4/26/2007, by Delta. Between 3/12/2007 and 3/15/2007, 4 (4,000-gallon) double-walled steel gasoline USTs and 1 (4,000-gallon) double walled steel abandoned UST from a single tank cavity on the central portion of the site were excavated. The abandoned UST was filled with concrete slurry. Upon excavation, the tanks were observed to be in good condition with no visible holes or areas of pitting. Between 3/16/2007 to 3/20/2007, 4 pump island dispensers and the associated product piping were excavated and removed. On 3/12/2007, 1 hydraulic lift was removed. 25 over-excavation soil samples were collected. High contamination detected in soil samples. For USTs excavation, the total BTEX range from ND (SW-17) to 1,796,700 ug/kg in SW-5 (9'), the total VOCs ranged from 205 ug/kg in SW-14 (9') to 2,828,170 ug/kg in SW-5 (9'). For the pump islands and piping excavation, total BTEX concentration ranged from ND in B-13 (12-12.5') to 327,700 ug/kg in B-2 (12-12.5'), the total VOCs concentration ranged from ND in B-3 to 659,890 ug/kg in B2 (12-12.5'). For the hydraulic lift excavation, no SVOCs exceedance. Groundwater encountered at a depth of 13' bg. 1 groundwater sample was taken from MW-4, 40,800 ppb ug/L BTEX, 34,800 ug/L MTBE. On 3/28-29/2007, 795.24 tons of soil was generated during the over excavation activities. The soil was transported and disposed at the Clean Earth of Philadelphia (CEP). The excavations were backfilled with the Certified Clean Fill. 8/1/2007 - Feng - Letter to Kevin Endriss (BP) requiring RAP and the construction details. Due 10/1/2007. (RJF) 10/10/2007 - Feng - Portfolio meeting with BP and Delta. Potentially developing the site. Tanks closure done and soil over-excavated. Drill at the side near the subway to inspect for impact on the subway tunnel. The new development may need to excavate down to 30 feet bg. Development schedule is unknown at this point. Delta will submit a work plan for proposing MPE events on 2" wells for short term remediation. (RJF) 12/10/2007 - Feng - Call from potential buyer and inquired about the site status. DEC stated the requirement of gw and soil remediation, plus the soil vapor mitigation. Buying is in process. (RJF) 1/11/2008 - Feng - Reviewed various documents submitted by HydroTech. 1) Phase I Environmental Site Assessment Report, dated 10/12/2007. Some Recognized Environmental Concerns were identified: the "E" Designation listing of the site for HAZMAT; historical utilization of the site as an auto repair facility and a gasoline station; presence of an open NYSDEC spill at the site; presence of elevated levels of VOCs in the soil and groundwater at the site at concentrations exceeding regulatory standards; inconsistent PBS information. 2) Investigation Work Plan, dated 11/27/2007. Investigation were proposed to be conducted in addressing the "E" Designation. HydroTech proposed GPR Survey to scan for any subsurface anomalies such as unknown tanks; to install 12 soil borings and 2 soil samples will be taken from each soil boring; and 3 groundwater probes will be installed for groundwater sampling.

Site plan with proposed soil boring location is provided. 3) Site Investigation Report, dated 12/20/2007. The GPR Survey did not identify any significant anomalies. Gasoline contaminated soil is present in the shallow soil in the northern and northwestern portions of the site. The gasoline contamination extends vertically to the deeper depths of the soil and horizontally to the northwestern boundary and western portion of the site. Soil samples collected from HTE-SP-2, 662,600 ppb VOCs at 2'-4', 934,900 ppb VOCs at 10'-12'. Groundwater was encountered at 12 feet bg and flows to northwest. The compounds detected in the groundwater plume are mainly gasoline compounds, range ND to 79,300 ug/L. 4) Remedial Action Plan, 12/14/2007. HydroTech proposed to have 1) soil excavation, down to 12'; 2) installation vapor barrier and sub-slab venting system; 3) RAP for groundwater will be submitted to NYSDEC. 5) Floor Plans for the new building. The new building will be occupied the whole site. Called Yash Saha (HydroTech). The excavation will cover the whole site and down to 12'-14', no dewatering is planned. DEC required the vapor barrier and sub-slab venting system design, groundwater remediation. HydroTech will submit a RAP including the soil excavation, groundwater remediation, and soil vapor mitigation shortly. (RJF) 2/7/2008 - Feng - Reviewed the Revised RAP, 1/31/2008, by HydroTech. HydroTech proposed: 1) soil excavation; 2) installation of vapor barrier and sub-slab venting system; 3) RegenOx and ORC injections for groundwater remediation. Reviewed also the 3Q2007 quarterly report. During the tank excavation activities in 3/2007, monitoring wells MW-1, MW-5, MW-9 and EW-1 were destroyed. 7/11 wells were sampled. BTEX range 73 ppb (MW-6) to 15,260 ppb (MW-4). MTBE range 18 ppb (MW-6) to 47,200 ppb (MW-4). Emailed HydroTech the comments and questions. (RJF) 2/15/2008 - Feng - Stipulation Agreement to Katan Group. Due back 3/7/2008. (RJF) 2/27/2008 - Feng - Received signed Stipulation Agreement. Sent for RD's signature. (RJF) 3/3/2008 - Feng - Reviewed the Revised RAP, 2/13/2008, by HydroTech. Addressed the comments provided on 2/7/2008. Approval letter to Katan Group and cc to HydroTech. DEC require the vapor barrier to be extended vertically to the surface grade through the foundation walls and more RegenOx injection points to be installed. Revised the vapor barrier design and the injection diagram will be submitted within 10 days. (RJF) 3/7/2008 - Feng - Spoke to D. Greffenius (Delta). BP will also oversee the remediation progress occurring onsite. An addendum letter/plan will be submitted for post-excavation sampling, dewatering plan in case dewatering is needed, and monitoring plan after the construction. BP will still continue to comply with the Stipulation between BP and DEC. (RJF) 3/13/2008 - Feng - Stipulation Agreement executed 2/28/2008. (RJF) 4/17/2008 - Feng - Email to HydroTech regarding the notification of chemox injection to EPA UIC program. HydroTech contacted EPA and it may take 30 days to have EPA review the details of the injections. Letter for offsite soil vapor point to HydroTech. 4/18/2008 - Feng - Call from HydroTech (Yash). HydroTech will inject the ORC while installing the soil vapor points. ORC will be injected at the sidewalk across the 4th Ave and some onsite injection points. (RJF) 4/24/2008 - Feng - email from Yash Saha (HydroTech). HydroTech has finished the onsite ORC injection and the soil gas implants offsite. (RJF) 5/1/2008 - Feng - Site visit. Met with Carlos Quinonez from HydroTech. The tech team was late. The work will be rescheduled. 5/2/2008 - Feng - Site visit and met with Yash Saha. Started RegenOx injection using GeoProbe. The intended injection points were marked. It will be drilled down to 25 feet and

AMOCO (Continued)

S106126142

the RegenOx will be injected into the 25 feet to 16 feet. Planned to finish 10 point today. Offsite soil vapor sampling also ongoing. According to Yash, there will be some dewatering activities along with the development. Dewatering water will need to be treated. Met with D. Greffenius (Delta) in DEC office. Received the IRAP. (RJF) 5/9/2008 - Feng - cc-d the EPA Underground Injection Control section's letter to Katan group for authorization to inject RegenOx and ORC. (RJF) 6/12/2008 - Feng - Called from Yash (HydroTech). All the RegenOx injections are completed at this time. They started the site excavation on 6/4/2008, so far at 8 feet bg, and had some foundation pillars installed. The elevator shaft part has not worked on yet. At this time, no work on site, but may excavate deeper later on. DEC still requires groundwater samples to confirm the effectiveness of the RegenOx, taken gw samples from the previous baseline sampling points. 6/16/2008 - Feng - 4Q2008, 3/18/2008, by Delta. The monitoring well network was gauged and sampled on 1/17/2008. 7 wells. DTW 11.01' to 14.88' bg. Flows to northwest. BTEX range ND to 18,500 ppb (MW-10). MTBE range ND to 21,000 ppb (MW-4). 6/18/2008 - Feng - Portfolio meeting with BP and Delta. In 6/2008, soil removal is about 4,600 tons. Delta is submitting the final version of IRAP. The exhaust blowers planned for building's lower parking levels will control vapors. No sub slab venting system might be installed since the basement is so close to water table. Conference call with BP/Delta, Katan/HydroTech will be scheduled. (RJF) 7/28/2008 - Conference call with Delta (D. Greffenius and G. Hinshalwood) and HydroTech (Rachel). Delta and HydroTech will be sending the brief summary of the site status. (RJF) 9/17/2008 - Vapor complaint from the resident across the street. DEC has contacted and required the developer (Perry Soskin from Katan Group) and the RP (BP) to immediately mitigate the vapor by today. Mr. Soskin from Katan Group and David Greffenius from Delta called back. Delta and EnviroTrac will be onsite and lay the plastic sheeting on the area today. They will there around 4:30pm. Tomorrow they will cover with a few loads of fills and more plastic sheeting on top of the fills if necessary. Called the resident David Simonoff and informed him that the responsible party will be onsite start taking of the odor today and DEC will continue to monitor the situation. (RJF) 9/17/2008 - Site visit and met with Delta and EnviroTrac. The north portion of property near the 5th Street is filled with water, half foot to one foot deep. Delta and EnviroTrac lay the plastic sheeting on the waterly area with some product, next to 4th Ave and east portion. A vac truck will be mobilized tomorrow morning and remove the water before the backfills. (RJF) 10/16/2008 - Letter to Katan Group and BP requiring the developer/RP to submit a Revised RAP which include monitoring wells installation around the property to access the current and during construction groundwater condition, dewatering plan, post construction remediation plan if necessary, and post construction groundwater monitoring plan. Revised RAP due 11/17/2008. The Department notifies the city agencies, DOB, DEP, and DOH on the site status and its intended development. (RJF) 10/29/2008 - 1Q2008, 7/25/2008, by Delta. Vacant. The monitoring well network was gauged and sampled on 3/6/2008. During tank excavation activities in 3/2007, MW-1, MW-5, MW-9, and EW-1 were destroyed. Due to construction onsite during first quarter 2008, all onsite wells are covered with soil and gravel and are suspected to be destroyed. 3 were were gauged (offsite wells). No LNAPL. DTW 14.04' to 14.78' bg. Flows to northwest. 3 were sampled. BTEX range ND to 407 ug/L (MW-7). MTBE range ND to 2.8 ug/L

(MW-6). 2Q2008, 9/29/2008, by Delta. Vacant. The monitoring wells were gauged and sampled 6/30/2008. 3 offsite wells were gauged. No LNAPL. DTW 13.48' to 14.12' bg. flows to northwest. 3 wells were sampled. BTEX range ND to 486 ug/L (MW-7). MTBE range ND to 1.9 ug/L (MW-6). (RJF) 11/10/2008 - Vapor complaint received from resident adjacent to the site. Visited the site, no access because the site was locked. Walked around the site and did not observe odor. No PID reading. Water retained in the open excavation again. (RJF) 11/10/2008 - Email to Bill Bogdon approving the 60 days extension for RAP. (RJF) 11/12/2008 - Delta and EnviroTrac were onsite to mitigate the vapor. A vac truck was mobilized and vac out the product in the property line area and water. Delta and EnviroTrac will then cover the area with product and rest of the water. They will come back tomorrow to see if water level rise again. Soil backfill may be done if necessary. (RJF) 12/10/2008 - Email from David Greffenius (Delta) "Please note that Delta and EnviroTrac, on behalf of Atlantic Richfield, will be transporting additional backfill to the 363 4th Avenue, Brooklyn site this Friday, December 12, 2008, in order to fill-in the remaining standing (ground) water at this site for the purpose of preventing another vapor complaint by the residents in this neighborhood. Our plan will be identical to our last effort: we will cover the standing water with plastic (where it is safe to do so), and then cover the plastic/water with between 4 and 6 loads of recycled concrete aggregate (RCA) backfill." 12/17/2008 - Spoke with David Greffenius (Delta). The excavation where been with water is backfilled. The product seems coming back again. Might need to investigate the adjacent parking lot. (RJF) 12/18/2008 - Visited the site and met with David Greffenius. The site is backfilled in most of the area with water. Some water is still retained near the back apartment building. No product was seen this time. David will stop by regularly to check if there is any recharge of the product. SanBorn maps may be reviewed for the parking lot next door. (RJF) 1/20/2009 - Met with Domenick Tonacchia (Tona Development), Bill Bogdon (Tona Development), Kevin Kleaka (Impact Environmental), and phone conference with David Greffenius (Delta). There will no dewatering. The building will be covered the entire site with cellar, no subcellar. There will be changes for the new building since they are trying to avoid dewatering process. DEC required an investigation work plan for both onsite and offsite by 2/2009. (RJF) 3/20/2009 - Reviewed Investigation Work Plan, dated 3/3/2009, by Delta. Delta proposes to install 7 monitoring wells at the sidewalks around the perimeter of the site. Work to be scheduled and RI report to be due within 90 days, 6/19/2009. Work Plan is approved. Letter to BP and cc to Delta. (RJF) 3/23/2009 - Reviewed the Investigation Work Plan, dated 2/2009, by Leggette, Brashears & Graham, Inc (LBG). LBG proposes to install 4 monitoring wells onsite within the perimeter. Comments to LBG and Tona Development via email. see comments in eDoc. (RJF) 3/24/2009 - Reviewed LBG's responses to the comments on the IWP, uploaded in eDocs. Additional comments on the responses were sent to LBG and Tona Development, in eDocs. (RJF) 4/3/2009 - Reviewed the Updated IWP, via email on 3/25/2009, by LBG. Previous comments are addressed. Work plan to be approved. Letter to Tona Development and LBG. 4/3/2009 - Conference call with BP, Delta, Tona Development and LBG. The offsite wells installation will be started within 2 weeks. The onstie will be within 1 week. Tona Development will advance some test pits to verify the real water table and will notify BP 2 days in advance so BP could send a field technician to the site.

Changes to the development plan will be made, the basement slab will be above water table. DEC require the RAP should include the vapor barrier and SSDS. Stipulation agreement will be sent to Tona Development. (RJF) 4/6/2009 - Stipulation Agreement to 267 Sixth Street, LLC. eDocs. (RJF) 4/28/2009 - Conference call with Tona Development and Delta. The onsite wells are installed and the report will be sent to DEC and Delta. Sewer line is identified beneath the sidewalk. A Con Ed oil line is also identified between the sidewalk and the site and might be extended into the site. Hand clearance will be made during the installation of the offsite wells. The test pits were advanced down to 9-10 feet below current grade, and found groundwater at 5 feet in one of them. Construction excavation will be above/at water table. Tona will be moving the soil around this week to make the ramp for the machines entrance. A plan to suppress the possible odor shall be in place before the excavation. And soil shall be tested for disposal and this enable the soil to be disposed immediated when being generated. Delta will review the Tona's recent investigation report to come up the IRAP, remedy to be proposed depend on the current site condition, soil and groundwater residual. Next updates call will be held upon the submission of IRAP. (RJF) 7/7/2009 - Reviewed Subsurface Investigation Report, dated 5/13/2009, by Leggette, Brashears & Graham, Inc. On April 9, 2009, the groundwater monitoring wells were installed onsite. Soil samples were collected continuously through the boring from the excavation grade to approximately 15 feet below the excavation grade. The final boring depth is approximately 20 feet below the historical grade of the site. The wells were surveyed. DTW 4.54' to 10.55'. no product was encountered, but film was observed. Soil samples run for VOCs and SVOCs. VOCs and SVOCs exceedances were detected, unit in ug/kg. MW-21, 10-15 feet, 920 benzene, 770 toluene, 30,000 ethylbenzene, 22,700 xylenes. MW-22, 5-10 feet, 6,200 benzene, 100,000 toluene,, 120,000 ethylbenzene, 400,000 xylene, 1,100 MTBE. MW-25, 10-15 feet, 1,500 benzene, 11,000 toluene, 43,000 ethylbenzene, 183,000 xylene. Groundwater samples were run for VOCs and SVOCs. Exceedances were detected, unit in ug/L. MW-21, 360 benzene, 300 toluene, 1,300 ethylbenzene, 1,480 xylene, 610 MTBE. MW-22, 230 benzene, 3,700 toluene, 2,300 ethylbenzene, 7,900 xylene, 28 MTBE. MW-25, 1,200 benzene, 620 toluene, 3,500 ethylbenzene, 6,200 xylene, 1,100 MTBE. And SVOCs were also detected in these wells. Compared to the historical soil and groundwater concentration levels, data show down trend for most of the wells. The data gained from this investigation will be used in preparing of the IRAP. Email BP and Delta for the status of the IRAP. (RJF) 7/14/2009 - Conference call with Tona Development, BP and Delta. Delta is putting together the LBG's report data and the new building plan, the IRAP will be submitted next week. Delta is also going through the MTA permitting process to have the wells installed at the sidewalk along 4th Ave. There are probably 3-4 feet of soil to be removed, no dewatering. Film = sheet in LBG's report. DEC required there are shall be wells being able to monitor the effectiveness of Delta's proposed remedy. BP will gauge and sample the onsite wells after the perimeter wells are in. (RJF) 1/4/2010 - Reviewed Work Plan for Offsite Monitoring Wells Abandonment, dated October 12, 2009, by Delta. Delta will abandon the three monitoring wells across 4th Ave, MW-6, MW-7 and MW-8. (RJF) 1/12/2010 - Reviewed Subsurface Hydrocarbon Assessment Report Addendum, dated October 29, 2009, by Delta. On June 19, 2009, EnviroTrac, on behalf of Atlantic Richfield and under the direction

of Delta, installed one permanent two-inch monitoring well (MW-13) at the northeast sidewalk of 6th Street using Geoprobe 6610 hollow-stem auger drill rig with direct push, macro-core sampling capability. MW-13 was drilled to 18 feet and groundwater was encountered at 12 feet. 2 soil samples were collected. MW-13 (11.5-12'), VOCs ND. MW-13 (19.5-20'), VOCs ND. On September 21, 2009, MW-13 as well as the monitoring wells onsite MW-20, MW-21, MW-22, MW-23, MW-24 and MW-15 were gauged and sampled. DTW 6.31' to 12.63' bg. NO LNAPL. unit in ug/L. MW-13, ND. MW-20, 7.6 benzene, 26 MTBE, 6 isopropylbenzene, 9.4 n-propylbenzene, 61 total VOCs. MW-21, 350 benzene, 290 toluene, 1,250 ethylbenzene, 860 xylene, 2,750 BTEX, 430 MTBE, 34 n-butylbenzene, 18 sec-butylbenzene, 87 isopropylbenzene, 10 p-isopropylbenzene, 520 naphthalene, 240 n-propylbenzene, 590 1,2,4-trimethylbenzene, 140 1,3,5-trimethylbenzene, 4,819 total VOCs. MW-22, 140 benzene, 810 toluene, 1,450 ethylbenzene, 420 xylene, 2,820 BTEX, 76 MTBE, 11 n-butylbenzene, 32 isopropylbenzene, 7.1 p-isopropylbenzene, 260 naphthalene, 60 n-propylbenzene, 250 1,2,4-trimethylbenzene, 100 1,3,5-trimethylbenzene, 3,621 total VOCs. MW-23, ND. MW-24, 21 MTBE, 27 total VOCs. MW-25, 1,100 benzene, 440 toluene, 2,790 ethylbenzene, 2,600 xylene, 6,930 BTEX, 390 MTBE, 25 n-butylbenzene, 15J sec-butylbenzene, 170 isopropylbenzene, 14J p-isopropylbenzene, 280 naphthalene, 300 n-propylbenzene, 830 1,2,4-trimethylbenzene, 400 1,3,5-trimethylbenzene, 9,354 total VOCs. Off-site Monitoring Well Abandonment Report, dated December 30, 2009, by Delta. On October 21, 2009, EnviroTrac, on behalf of Atlantic Richfield, abandoned offsite wells MW-6, MW-7 and MW-8 by 1) removing the bolt-down cover and riser cap from each well; 2) tremmie-filling each well screen and riser pipe with Portland cement/bentonite slurry from the bottom of the well to 5 feet bg using a grout pump; and 3) filling the top 5 feet of riser pipe and the flush-mount cover of the each well with Portland cement to the groundwater surface. (RJF) 3/10/2010 - Neil Steven (646-542-4312) from Law Enforcement Region 2 called. Odor complaint from the residents. He went to the site yesterday, there was strong odor and dark product. Email to Nick Onufrak (BP), Bill Bogdon (Tona Development) and David Greffenius (Delta). "Bill and Nick, DEC received a odor complaint from the nearby residents for this site. Our ECO went to the site yesterday and he said there was strong odor and dark product was witnessed. You MUST send someone out there TODAY, to take pictures, sample the product, remove the product and mitigate the odor. If nobody is there today, we will send contractor out tomorrow and bill everybody. " Called and spoke with Nick Onufrak. He will call EnviroTrac and see what they can do, and give us an update by the end of today. Call Domenick (Tona Construction), he will send out someone to check out. Forwarded him the email since Bill is no longer with Tona. (RJF) 3/10/2010 - email from Gordon Hinshalwood (Delta). "We investigated SS 13397 today in response to your email below. Some soil staining was identified in the rear area of the site, but free-phase NAPL was not identified on the standing water in the excavation, nor were hydrocarbon odors identified. We plan on delivering a frac tank to the property tomorrow afternoon and pumping the standing water out of the excavation (the volume of water is reportedly too large for a vac truck to handle). We will store the water in the tank on-site until we can arrange for it's proper disposal. We also intend to backfill the excavation to prevent further water accumulation on-site, which will likely happen on Friday, or early on next week." 3/11/2010 - closed the spill 09-12838 opened for receiving the odor complain from

Cynthia Simonoff and refer to spill 89-01904. Called Ms. Simonoff and told her that BP will be there this afternoon to vac the water out and will do some backfill by Friday. (RJF) 3/11/2010 - NYCDEP called and claimed there was odor and product onsite. DEC Tibbe visited the site and met Dave Greffenius (Delta) and EnviroTrac. There was a petroleum odor but it was not significant. There was some floating product and sheen on the water in the excavation, and there was stained soil most of the way around the excavation, at water level. Delta was directed to sample the oil and excavate the stained soil. DEC also required addressing any floating product, if there is any, during the monthly gauging event. DEC emailed to Delta and required the submittal of RAP to address the soil and groundwater, regardless of the potential development, because the schedule is unknown. Draft proposal or a review of alternatives by 3/2010. (RJF) 3/17/2010 - email from Nick Onufrak (BP). They will be onsite to pump out more water and backfill some of the excavation Wednesday and Thursday. Domenick (Tona Development) is aware of the work. DEC responded to the Yvonne Schmitz's inquiry. (RJF) 4/7/2010 - received complaint and spill 1000269 was opened. DEC Spill staff visited the site. The responder did not detect any petroleum odors and from his vantage point outside the fence, could not see floating product, but he did see standing water in the excavation. DEC email to BP and Tona Development requiring that the issue of standing water in the excavation must be rectified in order to prevent future impacts to the area residents as well as reduce and/or eliminate future complaints. The only way could be pumping out the water and completely fill the excavation to grade. DEC requires arrangements to complete this task immediately. Email from David Greffenius and attached with LNAPL Forensic Analysis Letter Report. Based on the fingerprinting forensic analysis of the sample collected from the top of the standing water, the floating oil was determined to be a relatively "fresh" diesel/fuel oil product probably released within the last two years. Based on BP's underground storage tank (UST) registration records, no diesel or fuel oil USTs were registered at the subject site from 1990 forward. 4/8/2010 - email from David Greffenius. EnviroTrac will begin water pumping operation tomorrow and site backfilling is scheduled for next week. 4/9/2010 - Letter from BP committing to address the odor complaint issue in a timely fashion and the spill remediation. 4/12/2010 - letter to NYC DOB, DOH, DEP notifying the open excavation issue at the site. 4/13/2010 - email from David Greffenius. Additional water pumping and removal, and site backfilling activities are scheduled to begin on Thursday, April 15. They are planning to bring in 1,000-1,500 yards of additional backfill material to the site (1,500-2,500 tons) over a 2-3 days period. checked spill 97-05330 at 278 6th Street. No investigation has been done at this site. PBS record 2-603857 at 383-393 4th Ave 278 6th Street show one 550-gallon kerosene (#1 fuel oil), one 275-gallon #2 fuel oil, one 4,000-gallon diesel, and one 4,000-gallon gasoline were removed in 3/2008. But no tanks closure report in file. 4/14/2010 - DEC Zhune called the owner of 278 6th Street. The property is sold already and he will call the consultant who did the closure to send the report in. 6/8/2010 - DEC responds to the Dailey News inquiry. Documentation of the backfill of the excavation including 3 photos taken after the backfill on 4/19/2010 were received from Delta. As seen from the photos, the backfill is up to the street level, and the monitoring wells are still in place. 6/9/2010 - DEC inspected the site around 9am and took some photos. No

petroleum odors noticed. NO sign of contaminated soil was found. 4Q2009, 3/2/2010, by EnviroTrac. Currently a vacant lot. The monitoring well network was gauged and sampled on 12/28/2009. Due to site flooding several wells were inaccessible during the 12/2009 event (MW-21, MW-22, MW-23, MW-24 were under water) and were subsequently gauged and sampled on 1/22/2010. 6 wells were gauged. No LNAPL. DTW 3.76 - 12.82 (below existing grade?). Flows to northwest. historic flows to south. 6 wells were sampled. MW-24 was under water, not sampled. Max benzene 490 ug/L (MW-25). Max BTEX 2,820 ug/L (MW-25). Max MTBE 120 ug/L (MW-25). 1Q2010, 5/17/2010, by EnviroTrac. The monitoring well network was gauged and monitored on 3/25/2010. 7 wells were gauged. NO LNAPL. DTW 2.19 - 10.23' (below existing grade?). Flows to northwest. 7 wells were sampled. Max benzene 9.1 ug/L (MW-22). Max BTEX 248.6 ug/L (MW-21). Max MTBE 10 ug/L (MW-24). 7/20/2010 - Reviewed Remediation Work Plan for Chemical Oxidation Solution Pilot Application, dated July 12, 2010, by Delta. During the week of June 21, 2010, Delta installed 6 soil borings in the portion near the 4th Ave. SB-8 (12-13'), 1,302,600 ug/kg total VOCs. SB-8 (20-21'), 12,568 total VOCs. SB-9 (8-10'), 1,884 total VOCs. SB-9 (19-20'), 525 VOCs. SB-10 (7.5-10'), 828,240 VOCs. SB-10 (15-16'), 217 total VOCs. MW-14 (11-12'), 167,549 total VOCs. MW-14 (17-18'), 15,788 total VOCs. MW-15 (7.5-10'), 318,470 total VOCs. MW-15 (14-15'), 15,908 total VOCs. 3 soil borings turned into MW-14, MW-15 and MW-16. soil sample was not recovered and therefore no sample was collected for MW-16. Delta proposes to inject iron activated sodium persulfate and a pilot will be conducted first. 2 application wells AW-1 and AW-2 will be installed in the northwest portion of the site. The application wells will be installed to 15 feet bg with 10 feet 4-inch diameter screen. 500 gallon of sodium persulfate/EDTA-chelated Fe(II) solution (0.50 kg/gal/0.01 kg/gal EDTA-Fe(II) as Fe) will be added into the two application wells. Surrounding wells MW-15, MW-16 and MW-22 will be monitored. Pre-application sampling will be included BTEX/MTBE, sulfate, DO, pH, ORP, and alkalinity. Sampling will be also conducted the day of the application, following day, and weekly for 2 weeks. Anticipated the pilot to be conducted the final week of 7/2010. ChemOx pilot work plan is approved. Report due 8/2010. 10/26/10 The site is temporarily reassigned to Alex Zhitomirsky as per V. Brevdo and M. Tibbe. I went to the site today. There is some standing water and some residential garbage at the site. I could not smell any odor. An e-mail with my findings was sent to V. Brevdo and M. Tibbe. AZ 4/11/2011 - Spill transferred back to JFeng. 6/24/2011 - On June 24, 2011, DEC reviewed the work plan proposing full scale ChemOx injection. Then DEC was also notified by the developer that they have financing coming into place and plan again to develop the site. A conference call was held on June 28th with BP, its consultant, and the property developer. The developer is planning to construct a building with a full basement that will cover the entire footprint of the property; with the basement only to a depth at which dewatering will not be needed. As such, BP will need to change plans - the developer agreed to provide us with their construction drawings, and BP agreed to provide a work plan for a focused investigation to determine whether they could over-excavate to remove remaining impacts; we also spoke about the need for continued gw monitoring which would likely need to include wells in the basement. 8/1/2011 - Reviewed Soil Investigation Work Plan, dated 7/14/2011, by Antea Group. 8 soil borings were proposed in order to identify remaining soil contamination. Comments: the drilling should

be beyond the historical contamination depth until hitting clean soil; sewer information in the sidewalk of 4th Ave; the 1997 misfiled oil burner replacement Block 987 Lot 11, but address 363 4th Ave; and if this site is a e-designated site under NYC DEP. 8/9/2011 - meeting with BP and Antea Group. Discussed the submitted IWP. DEC required the drilling down to the clean depth in order to vertically profile of the soil and identify remaining soil contamination. Revised IWP will be submitted. 9/9/2011 - reviewed additional revision of the IWP submitted via email by Antea Group on 9/5/2011. "reduced" PID reading is defined as immeasurable reading. So soil samples from the water table interface, highest PID reading, reduced PID reading, and 3 feet below reduced PID reading will be taken. 9/9/2011 - approved IWP for installing 8 soil borings to assess the current soil condition. Report due 12/2011.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"VOUGHT" VOLATILE ORGANIC COMPOUNDS DETECTED IN SOIL BORINGS AT
PROPERTY. REMEDIATION WAS RECOMMENDED TO AMERICAN HI-TECH/ALLAN
MILLER. 12/2/2003 Transferred from Sangesland to Rommel
5/25/05-Vought-Received from Michael Morris (ATC 212-353-8280x345)
regarding status of report review. Vought returned call and requested
another copy of report be sent. New groundwater data will be
collected and sent. 6/7/05-Vought-File review by Vought: Letter from
American Hi-Tech (Trish Merwin)-12/15/94. "American Hi-Tech has
attmepted to remove two 4000 gallon and one 4000 diesel underground
storage tanks from the above referenced facility. However, these
tanks are encased in three feet of concrete and removal is not
possible". "AHT would like to abandon these tanks." Revised and Final
Site Assessment Work Plan (Dames & Moore)-7/8/94. Three (4000-gallon)

S102672726

USTs onsite. "...the tank inculcated with the tracer gas detected in the soil gas was filled with water and not petroleum product at the time of testing. On this basis, it appears that one of the USTs may have failed the recent integrity testing". "if a tank test failure is confirmed then a site assessment as described below will be conducted". Site assessment will include soil borings at former tankfield and at pump island. Focused Subsurface Site Investigation (ATC Associates)-2/20/01. "Three 4000-gallon gasoline/diesel USTs were abandoned at the Site in 1996. Two 550-gallon gasoline USTs were removed from the Site in 1996; and three 5000-gallon fuel oil USTs were abandoned in 1998." Fifteen soil borings were performed at the site. "...ATC concludes that the former presence of gasoline and/or diesel USTs has adversely affected the subsurface soil and groundwater quality at the site and that further investigation is recommended". ATC recommends that "additional soil borings and groundwater monitoring wells be installed at the Site to further delineate soil and groundwater conditions". In 1995 approximately 49.25 tons of impacted soil was removed from the Site. Sixteen soil samples and six groundwater samples were collected. Soil analyticals show 20200ppb 1,2,4-trimethylbenzene(B1 11.5-12.5'bg), 3950ppb xylene(B2 12-13'bg), 908ppb benzene(B7 6-7'bg), 15800ppb ethylbenzene(B7 6-7'bg), 141000ppb 1,2,4-trimethylbenzene(B7 6-7'bg), 305ppb benzene(B8 11.5-12.5'bg), 78.4ppb benzene(B9 11-12'bg), 177ppb MTBE(B9 11-12'bg), 135ppb benzene(B10 10-11'bg), 75ppb benzene(B12 6.5-7.5'bg), 64ppb benzene(B13 12.5-13.5'bg). Analyticals also show high SVOCs at B6 19-20'bg such as 126000ppb flouranthene, 156000ppb phenanthrene, 38400ppb benzo(b)fluoranthene. Boring logs for B6 show "coal fragments, cinders and ash in layers". Groundwater analyticals show 193ppb MTBE(UHP 1W), 38ppb MTBE(UHP 8W). Groundwater Investigation (ATC Associates)-6/3/02. Installation of six monitoring wells. "The lack of contamination in the upgradient sample from MW4 along with the calculated groundwater flow direction indicated that the former gas station locations both onsite and offsite at the intersection of Fourth Avenue and Sixth Street have not contributed to the groundwater contamination at this Site". No active USTs onsite. "Therefore steady state equilibrium has been reached between the contamination present in the soil and groundwater resulting in attenuation of the contamination by the mechanism of sorption, degradation and dilution". ATC request No Further Action. Groundwater at depth of 15-17' below grade and flow to the north. Groundwater analyticals show 7.4ppb 1,2,4-trimethylbenzene(MW1), 109ppb MTBE(MW1), 10ppb MTBE(MW2), 5ppb ethylbenzene(MW5), 15ppb xylene(MW5), 30ppb MTBE(MW5), 19ppb MTBE(MW6). Limited Groundwater Investigation(ATC Associates)-6/2/05. "...ATC personnel attempted to collect groundwater samples from six onsite groundwater monitoring wells; however, ATC could only locate five of the wells". Groundwater at depth of 15 feet below grade and flow to the north. Report recommends No Further Action. Groundwater analyticals show 140ppb benzene(MW3), 12ppb ethylbenzene(MW3) and 12ppb MTBE(MW4). 6/7/05-Vought-Called Michael Morris and required that 1)he provided suspected source of groundwater contamination in MW3 2)continue quarterly monitoring of groundwater 3)submit surrounding area site plan. Vought sent letter stating same. 9/26/05- Obligado - FILE TRANSFERRED FROM VOUGHT TO OBLIGADO 10/20/05 - Obligado - Received phone call from Michael Morris. Requesting status of closure report review. Told him had not been reviewed yet but would look at it in near future. 10/28/05 - Obligado - Review Limited Remedial

Investigation Report. Gasoline service station 363 4th avenue east of site across 4th Ave with open spill number 9606963. "further, although sensitive receptors, including the Gowanus Canal, residential development, schools, et.c, were observed in the area, none of these receptors are suspected to be impacted as a results of the limited impacted groundwater at the Site. Ground water analyticals from 5 wells: 118 ppb benzene (mw3), 7.58 ppb ethylbenzene (mw3), 10.5 ppb MTBE (MW5). NFA rejected. Require 1) continued quarterly groundwater monitoring, and include MW6 in monitoring network. 2) Include Gowanus Canal on Surrounding Area Site plan. Call Michael Moore, inform him of above requirements. 3/13/06 - Obligado - Review report from ATC, dated January 23, 2006. Subway line approximately 30 to 40 ft bgs and upgradient, ATC doesn't suspect any impact to subway line. Ground water sampled on 11/18/05 and 1/4/06. On 11/18/05, the only BTEX compound is xylene at 5.98 ppb in MW2 and MTBE is 27.7 ppb at MW3. MW-6 not sampled. On 1/4/06, no BTEX compounds were detected in anywells, MTBE was detected at MW3, MW4, MW5, and MW6, with max at MW6 of 353 ppb. Conclusions: - No odor, sheen, or floating product was observed, and no sensitive receptors appear to be impacted by the groundwater beneath the site. BTEX concentrations have decreased to non-detect. Request no further action. Discussed site with J.Sun on 3/10/06. Agree to grant no further action.

Billy Maysonet Brothers Environmental 610 Underhill Avenue Bronx, NY 10473 877-839-6009 End JK. 09/26/06 this case was transfer from Albany to Region 2. 10/2/06-Zhune called Rosma developepment spoke to Joe Weiss. He told me that ken Mikkelson is no longer working for this company. He asked me to sent the stipulation letter copy to: Rosma Devepolment 199 Lee Ave Apt # 287 Brooklyn, NY 11211 Att: Joe Weiss 10/2/06-Zhune called Dyber. He doesn't have estipulation letter in his recods. 10/2/06. A copy of Stipulation letter signed was sent to Joe Weiss above address. 08/22/09- Zhune spoke to Dennis Goldstein from Ferrantino & Co. He need ccopies of stipulation and spill report. I said I will fax them. 04/14/10- Zhune spoke to Mike Taylor (Service Manager) from Ferrantino & CO 718-832-6700. He said Ferrantino sold the propety in 2005. The tanks were closed and soil invetigation was performed. The new owner knocked down the building. He plan to do something else. Mike will contact the company that closure the tanks and he will call back. 05/28/10-Zhune called Mike Taylor for three weeks in a road. Everytime that I spoke to him he said I will call you back with name of company and he never called back. 05/28/10-The Petroleum Bulk Storage facility report show four tanks closed in 2008. 001 550 gal. Kerosene 002 275 " #2 heating oil 003 4000 " Diesel 004 4000 " Gasoline 08/01/2011- Fenley & Nicol Environmental sent the subsurface investigation report, dated June 10,2011. The result of GPR survey did not revealed anomalies consistent with the presence of UST sytem. Apparently the UST system and pump island have been removed in August 2007 during demolition of structure On March 21 to 28, 2011 F&N installed thirteen(13) soil probes, three temporary wells and three monitoring wells. The analitical soil results indicates one VOCs (1,2,4 Trimethylbenzene 6000 ug/kg in sample Sp-10(10-15') detected above the NYSDEC Soil Cleanup Guidance values and some SVOCS detected below the NYSDEC Soil Cleanup Guidance value. The groundwater results indicates that TW-2 had Isopropyltoluene and sec-Buthylbenzene exceedence of 10 ug/lit and 74 ug/lit respectively. TW-3 had secbulthylbenzene exceedence of 32 ug/lit. MW-2 had no exceedence and no VOCs were detected in monitoring wells MW-1 and MW-3. Groundwater flow direction was found to be southwesterly direction. Spill Closed. .

DEC Memo: need to send TTF letter no PBS for this address. 4/28/05. J.Krimgold reviewed a letter report submitted by Mercury Tank & Pump dated April 25, 2005. According to the report a 550 gal #2 oil tank failed the test due to disconnected pipe fittings on the top of the tank. The tank was empty at the time of test. Tank top was excavated,tank was cleaned up and filled with concrete slurry. Before this a hole was drilled through the bottom of the tank to obtain a soil sample. All analytes were found below TAGMs objectives. NFA letter.

Remarks: Doing a tank test on an old heating tank that no one knew was there.
No contamination found or evidence of a leak. Ullage failure...
unsure of any removal of tank.

Site Description:

The Metropolitan Gas Works site is located at the intersection of 12th Street and Second Avenue in Brooklyn. Virtually the entire site is flat and covered with buildings or pavement. The surrounding neighborhood is primarily industrial and commercial, with some residential properties within a few blocks. To the south, across 12th Street, the New York City Board of Education maintains a two story office and supply building. Across 2nd Avenue to the east is a municipally owned garbage truck maintenance facility. An active

Env Problem:

commercial property borders the site to the north, and the Gowanus Canal borders on the west. The site was occupied by a large manufactured gas plant (MGP) from the late 1800s to the 1930s. The MGP converted coal and petroleum products to gas, which was used for heating, cooking, and lighting purposes in the surrounding areas. The process produced large amounts of coal tar wastes which have heavily contaminated the soils beneath the site. The western third of the site (where the actual gas plant was located) is now occupied by a multi-story brick commercial building including a Pathmark grocery store. The remainder of the site, (which housed gas purification and storage facilities and three large gas holders) was redeveloped under the Department's Voluntary Cleanup Program in 2003 and now houses a large Lowe's building supply store. Remediation included removal of the contents of the gas holder foundations and grossly contaminated soils in the surrounding areas to depths ranging from 4 to 16 feet. Tar contamination has penetrated deeper than this, down to depths of 60-80 feet; however, this material could not be reached by conventional excavation techniques and presents little danger of exposure. Some of the tar which was left behind at depth remains mobile in the subsurface. A series of passive tar recovery wells remain in service and continue to recover tar as of June, 2007. Tar is collected on a monthly basis, and shipped off site for proper treatment and disposal. No evidence of tar contamination entering the Gowanus Canal from this site has been found to date. However, tar contamination from a similar site nearby (Carroll Gardens) has been found entering the canal, and investigation of tar migration at this site remains incomplete. The remaining portion of the site (beneath the Pathmark store), and off site areas where tar and contaminated groundwater have migrated, were beyond the scope of the Voluntary Cleanup Agreement. The site was listed on the registry, and has now been included in National Grid's multisite consent order. A remedial investigation is began in late 2009 and is still under way.

Contaminants of concern The principal waste disposed on the site was MGP tar, which is a brown, oily liquid that is slightly denser than water. Large amounts of this tar escaped from the foundation of the gas holders, and appear to have migrated off site to the south and west of the site. The tar contains high levels of BTEX and PAH compounds. Both groups of compounds have been found in site groundwater. Impacted media Soils and groundwater at the site are heavily impacted by BTEX and PAH compounds. The impacted soils are found at depths of 8-16 feet and greater beneath the Lowe's portion of the property; contaminated soils above this elevation were removed and replaced with clean backfill during the remedial action in 2002. No information is available on the Pathmark portion of the site. However, gross contamination was found within a few feet of the Pathmark foundation and it is likely that significant amounts of soil and groundwater contamination are present in this area also. Known SCG exceedances Soil and groundwater contain BTEX and PAH compounds at levels far in excess of SCGs. These exceedances represent a significant threat to the environment. Special Resources impacted No special resources identified. The adjacent portion of the Gowanus Canal is heavily contaminated from a variety of sources, but specific impacts from this MGP site have not been identified. The off site tar migration appears to be taking place at depths below the bottom of the canal.

Health Problem:

Further investigation is needed to assess the nature and extent of site-related contamination and the potential for exposure to site

contaminants. The site currently has several buildings and a paved parking lot, therefore, contact with subsurface contamination is unlikely. Exposure to site-related contaminants in groundwater is not expected because the area is served by public water. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion on the site.

DEC Region: 2
DER Facility ID: 147978
DEC Memo: 09-19-11 - LZ Quartely reports for October - November 2010 and April - June 2011 are in eDocs. 04-28-11 - LZ The Quarterly Site Status Report dated January 2011 by Fenley & Nicol Environmental, Inc. summarizes activities for October - December 2010 (eDocs). No. of Wells: Monitoring wells -Seventeen; MW-3, MW-6, GT-01, GT-02, GT-04,GT-06 through GT-10, GT-14 through GT-20. Recovery wells - Nine; MW-01, MW-02, MW-04, MW-05, MW-07 through MW-11 Extraction wells -TPE-01 & TPE-02 Wells with LPH/trace levels: GT-17 & Sump in Basement During monthly monitoring, the level of product in the holding tank was recorded. No product was detected in the holding tank for this report period. 09/30/10 - LZ The June-August 2010 report (eDocs), dated September 4, 2010, prepared by Fenley and Nicol, indicates that five wells exposed free product; MW-1 (1.46 feet), MW-2 (0.15 foot), MW-9 (0.49 foot), GT-07 (0.11 foot)and GT-17 (0.03 foot). 09/27/10 - LZ The April-June 2010 report(eDocs) by Fenley and Nicol indicates that only one out of 20 monitoring wells had a detectable level of floating product (MW-1 - 0.25 foot). 06/28/10 - LZ Fenley & Nicol Environmental, Inc., submitted the January-March 2010 report (eDocs), received in June 2010. The report shows that only MW-1 had measurable levels of free product of the highest thickness 0.92 foot (February). Seventeen wells were gauged on the site. No free product was recovered by the the extraction system operating at the site. The next report due end of July. 02/18/10 - LZ Fenley & Nicol Environmental, Inc., submitted the October-December 2009 report (eDocs), dated February 8, 2010. The report shows that only MW-1 had measurable levels of free product of the highest thickness 0.7 foot. Traces of free product were encountered in MW-5. Twenty two wells were gauged on the site. No free product was recovered by the the extraction system operating on the site. 09-28-09 - LZ The June-August 2009 report(eDocs), prepared by Fenley & Nicol Environmental, Inc, indicates that the remediation system is in operation. The extraction system contains connects 11 extraction wells. Five monitoring wells had free-phase product (max, thickness of 1.46 ft in MW-1). The report, the submission of which resumed after a two-year pause, lacks the quantity of recovered petroleum (the report says about 1 inch of recovered product), monthly gauging results (before September Nicol and Fenley had no agreement with Bayside on monthly gauging), information on operational times of the extraction system (it starts and stops by a preset timer). I spoke with Mr. Oloke of Fenley and Nicol, and he assured that missing data will be included in the next report due November 30, 2009. 05/27/09 - LZ In its May 27, 2009, letter (eDOCs) department directs BFODC shut down the remediation system for seven calendar days in June 2009 prior to gauging of all monitoring wells; informing the department of the date of the gauging event within 10 business days from your receipt of the letter; submission of all overdue reports detailing remedial activities by the end of June. 04/07/09 - LZ Spoke with Dave Oloke; the system has been repaired and is in operation. 3/11/09 - LZ This spill case reassigned to Leszek Zielinski. Since the remediation system is out of service, the piping system needs to be repaired. I called Dave Oloke of Fenley and Nicol requesting to bring the system back in service. Also, I

requested--and received--reports on gauging of the monitoring wells covering September 2008 to January 2009. The received report indicates that 22 wells were gauging in December 2208 and January 2009. Two wells, MW-5 and MW-8, contained free product; MW-5 (0.8 ft and 0.6 ft) and MW-8 (4.0 ft and 6.8 ft) in December and January. (eDocs). Prior to Sept, 2004 data translation this spill Lead_DEC Field was "BREEN" 11/18/94: REASSIGNED FROM SIGONA TO BREEN ON 11/18/94. see eDocs attached to this spill report. also see 9009292 and 9009301.

DEC Region: 2
DER Facility ID: 20999
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL" This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. DEC Sigona sent a letter to RP on Jan 23, 1990 with requirements for spill investigation. On May 16, 2002, DEC (Austin) was contacted by Mr. Englemenan (917)747-7702 representative for the owner. He requested to pave over the monitoring wells at the site. DEC (Sigona) called Mr. Engleman on 5/17/02 and left message on answering machine to submit recent groundwater testing results to determine if the spill case could be closed. 3/17/06 This site had documented impacts to groundwater. A complete investigation was needed in 1989. The file does not reflect completion of an investigation. Available data indicates that remediation would have been necessary. Need to establish the current status and determine if site should be in one of the remedial programs. 9/12/2006 This case was transferred from Albany to Region #2. Zhune spoke to Mr. Englemenan He said as soon as he find documentation. He will send it.
Remarks: (6) 550 GALLON TANKS WERE TESTED BY FIRE DEPT, TANKS ARE LEAKING, LEAK ORDER FOR INVESTIGATION ISSUED BY CITY.

Acres: 9.400
Date Record Added: 11/30/2000 4:06:00 PM
Date Record Updated: 1/22/2008 1:54:00 PM
Updated By: GWHEITZM
Site Description: The site is located between Gowanus Canal, 11th St. Basin, 12th Street, and Second Ave., Brooklyn, NY 11215. In the area operates an oil distribution terminal, a garbage truck maintenance facility, a school district warehouse, a Pathmark supermarket store, a cement mixing facility, a rental truck company, and a junk yard. Residential areas exist within a few blocks of the site. From 1880 to the late 1930's, the Metropolitan Works manufactured gas plant (MGP) operated on the site. Commercial buildings, including a 4 story post office, have been built on the remaining foundations of the MGP. The USPS Gowanus operated until 2000, when it was demolished for redevelopment. During the demolition and regrading of the site, the MGP gas holders were discovered, full of tar mixed with construction debris. The MGP tars have significantly contaminated soil and groundwater. In 2002-2003 approximately 34,000 tons of contaminated material was excavated, transported and thermally treated off-site under a VCP remediation agreement. A release and covenant not to sue was issued on August 6, 2003. Currently, a Lowes store operates on the site.

Env Problem: The soil and the groundwater at the site were significantly contaminated with MGP tars and NAPLs containing BTEXs and PAHs. The site was remediated under the supervision of the MGP Division in Albany.

Health Problem: Public water is provided to the area, thereby preventing exposures to groundwater. Most of the contaminated soil has been removed from the site. The site has been redeveloped at into a retail store and the entire site has been covered with a building, pavement or landscaped areas, thereby preventing direct contact with residual contamination.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SUN" 01/07/04 ALso refer to Spill #04-07082 9/27/04-Reassinged from Rommel to sun. 9/28/04 File Update by Sun: On 9/29/04, Joe Sun conducted a site visit. Sun spoke to Mark Turoff of Environmental System Group (Tel: 917-750-1483) about the site investigation he has recently performed. Per Turoff, his company had installed twelve soil temporary wells on 9/27/04 and had collected soil and groundwater samples from eleven wells except one which contained one foot of free phase product. He will send me the invstigation report after the laboratory report is complete. 10/7/04 Sun received an e-mail from Lauren Gallagher, Project Manager from NYCDEP on 10/7/04 for this "Little E Restricted" site. She will fax to me a copy of Phase II testing and accompanying HASP which they approved on 9/8/04. 04/08/05-File Update by Sun: The Stipulation Agreement was signed by the owner and executed by the Department on 12/15/04. -On April 6, 2005, DEC received an Investigation Summary Report from owner's consultant, Advanced Site Restoration, LLC. Joe Sun called the owner (Paul Rigas)on 04/08/05, informing him that the Department disapproved the report, since it does not delineate the off-site contamination. A meeting is scheduled for April 19, 2005 at the site between the DEC and the owner to discuss the location of off-site wells. -WJS 04/25/05-File Update by Sun: On 5/25/05, Sun sent a letter to the property owner (George Rigas), informing him that the Department has reviewed and approved the Investigation Summary Report with the incorporation of the following items: 1. Install two (2) two-inch (minimum) off-site monitoring wells in sidewalk east of Butler Street between 3rd Avenue and 4th Avenue in Brooklyn, New York. The monitoring wells should be selected at locations down-gradient of the existing monitoring wells TMW-16 and TMW-17. The new wells will provide the additional off-site delineation of dissolved groundwater contamination plumes. Pursuant to the Stipulation Agreement signed and dated effective December 15, 2004, the Department requires a Remedial Action Plan (RAP) be submitted by June 24, 2005. THe Department requires that the RAP shall detail the work proposed to remediate all contaminated media (groundwater and soil) and provide a detailed descriptions of a vapor mitigation efforts used in the construction of the residence including the installation of vapor barriers and sub-foundation venting systems. (WJS) 06/29/05 File Update by Sun: On 06/29/05, Sun sent a letter to the property owner (George Rigas), informing him that the Department has reviewed and approved the Remedial Action Plan, prepared by Advanced Cleanup Technologies, Inc., with the incorporation of the following items: 1. The OMMP shall describe and tabulate the

S101658438

operation, maintenance and monitoring schedule (frequency) for system equipment and their performance, influent and effluent water sample, system influent and effluent air emission, all monitoring wells and soil vapor monitoring points. EPA Method TO-14A, not TO-02 as stated in Reference 1, shall be used to sample and analyze air stream before and after carbon treatment. 2. Soil Vapor Extraction System (SVES) Data sheet and Air Stripper Data Sheet shall be completed and submitted to the Department by November 15, 2005 for review. The Blank SVES and Air Stripper Data sheets are attached here for your reference. 3. Measurements of groundwater levels in all area are to be conducted monthly for the first three months, and then quarterly. Collection and analysis of groundwater and soil vapor samples shall be conducted monthly for all monitoring wells and soil vapor monitoring points. (Sun) 12/09/05-Sun: Sun received an email from Paul Stewart of ACT, Inc., informing the Department on the current status of the projec: The owner modified development plans for the property to include a full basement with elevator room and underground parking rather than a partial basement with elevator room only. The NYCDEP required modifications to the work plan approved by the NYSDEC to account for the full basement. The modified work plan was approved by the NYCDEP and includes a vapor barrier under the entire property and a more extensive subslab ventilation system. A supplemental soil and ground water investigation is currently being performed and should be completed by Friday. The existing cased wells were surveyed and a flow direction to the west was calculated. The results of the supplemental investigation will be used to size and locate the soil vapor extraction and ground water recovery systems. (Sun) 01/11/06-Sun: Sun sent a letter to the property owner, Paul Bregianos of Arc Electrical and Mechanical, approving the revised Remedial Action Plan prepared by Advanced Cleanup Technologies, Inc. dated 01/04/06, as noted below: Soil Vapor Extraction System (SVES) data sheet and Air Stripper Data Sheet shall be completed and submitted to the Department by March 31, 2006 for review, (2)The owner must notify the Department of site status change from Closed-In Place to Closed-Removed for seven (7) 550-gallon gasoline underground storage tanks (USTs) within 30 days prior to sustantially modifying a facility. (Sun) 03/27/06-Sun received an email from Paul Stewart of ATC on 03/06/06 informing DEC that they are planning to issue to DEC a formal report on the extent of free product and dissolved gasoline in ground water beneath the site. It will also contain a summary of underground storage tank closure activities as requested in DEC's correspondence to the property owner. We should have the report to DEC by the end of this week. (Sun) 03/27/06-Sun sent an email to Paul Stewart of ATC stating that DEC is still waiting to receive a report from ATC on the extent of free product and dissolved gasoline in ground water beneath the siteand a summary of underground storage tank closure activities as requested in DEC's correspondence to the property owner. (Sun) 06/16/06-Sun: Paul Stewart of ACT (Consultant for RP) informed the Department that installation of the recovery well, monitoring wells and vapor monitoring points is complete. The horizontal ventilation screens and piping associated with the vapor extraction wells is also complete. Tomorrow, we will be overseeing installation of the vapor extraction wells. We will also be connecting those wells to piping leading to the location of the treatment system. Next week we will be installing the remaining sections of the 20 mil HDPE liner. The concrete foundation floor will be poured soon after that. Once the first floor parking garage has

Map ID

EDR ID Number
EPA ID Number

124 4TH AVENUE (Continued)

S101658438

been completed, we will perform a ground water pump test and a pilot soil vapor extraction test to size a treatment system. Installation of the treatment system will depend upon the construction schedule and access to the alleyway where it will be located. We expect that will take place this fall. (Sun) 09/06/06-Sun: Sun received an email dated 09/04/06 from Paul Stewart of ACT (Consultant for RP) as follows: "All wells and subsurface piping have been installed. We are waiting for completion of the first floor so we can install a pilot system and perform a pilot SVE and ground water pump test. I expect that should take place in October". (Sun) 12/13/06-Sun: Sun received an email from Paul Stewart on 10/30/06, stating that All of the wells and piping for a pump and treat system, vapor extraction system and subslab depressurization system have been installed. He is currently waiting for completion of the first floor of the building so he can install a pilot system and perform a pilot SVE and ground water pump test. He spoke with Paul Bregianos who said the first floor would be completed after the steel was installed which should be this winter. (Sun) 03/23/07-Sun: On 03/23/07 Sun received the following email from Paul Stewart: We completed piping the soil vapor extraction and recovery well conduits to the western portion of the utility room and the concrete floor was installed. We are now awaiting installation of electric service to the utility room in order to perform a pilot SVE and pump test. I will notify you when the pilot tests are scheduled. (Sun) 10/19/07-Sun: On 10/18/07 Sun received the following email from Paul Stewart of ACT for the status of this project "We performed a pilot test of the soil vapor extraction system and a pump test on the recovery well last week and plan to have a pilot test report issued next week. The full scale remedial system should be installed before Thanksgiving". (Sun) 12/18/07-Sun: Sun received the following email from Paul Stewart of ACT, "A pump test performed on the recovery well indicated that ground water could not be recovered at a flow rate that could contain the ground water plume. Therefore, we will rely upon two 15 Hp regenerative blowers to remediate soil and ground water in the 6 SVE wells installed beneath the site. A 5.5 Hp regenerative blower for a sub-slab depressurization system is also being installed as a precaution to protect building occupants. The remedial system is being delivered this week and will be installed and put into operation the first week of January, 2008. I will forward a startup report to you and the NYCDEP once the remedial system has been rendered operational." (Sun) 2/25/08-Sun: Sun received the following email from Paul Stewart of ACT, the consultant for the RP, "The remedial system has been completely installed and is ready for full scale operation. We are waiting for the owner to provide us with an active telephone line to permit unattended operation. The telephone line should be installed within 10 days at which time the remedial system will be turned on. A Startup Report and an Operation, Maintenance and Monitoring Plan will be forwarded to your attention in approximately 2 weeks. A Closure Report will also be submitted to the NYCDEP with a copy to you." (Sun) 3/12/08-Sun: Sun visited the site to witness the start-up of the remedial system. (Sun) 4/2/08-Sun: Sun received the Remedial System Operation, Maintenance and Monitoring Plan (OMMP) from Paul Stewart of ACT, Inc. (Phone # 631-293-4992). (Sun) 4/11/08: Sun sent the following email to Paul Stewart: "Hi, Paul, While I was reviewing the Remedial System OMMP, submitted by you, dated April 1, 2008 for the above referenced site, I found the following documents are missing in the OMMP report: 1. Figure 1: Remedial System Layout 2. Figure 2:

Map ID

S101658438

Treatment Room Equipment Layout 3. Table 1: Troubleshooting Guidance Table I also noticed that P&ID was not included in the OMMP. The P&ID is a very important document which shows all the equipment, and instrumentation and control. Please revise your OMMP to include P&ID. I have reviewed SVES Data Sheet and found one error on Item #12 (Contaminant). Based on 33 ft of Stack Height and 250 CFM of Air Flow Rate, the Permissible Air Output Concentration for Benzene is 0.02206 LBS/HR, NOT 0.00494 LBS/HR as indicated in your SVES Data Sheet. (Please note that 0.00494 LBS/HR is based on 15 ft of Stack Height). Please address the above comments and resubmit." (Sun) 4/22/08-Sun: Sun reviewed the Remedial System Operation, Maintenance and Monitoring Plan (OMMP), dated 3/31/08, submitted by RP's consultant, Advanced Cleanup Technologies, Inc. (ACT). The Department also reviewed the supplemental documents submitted by ACT on April 16, 2008, including Figure 1 through 3 and Table 1 which were missing in Reference 1 and a revised SVES Data Sheet indicating the correct Permissible Air Output Concentration for Benzene as 0.002206 LBS/HR. The Department approved the OMMP with the condition that a third Pressure gauge & sampling port be installed on inter-connection between two Vapor Carbon Filters. (Sun) 6/24/08-Sun: Sun received the following email from Paul Stewart of ACT, "Operation, maintenance and monitoring of the remedial system is being performed on a monthly basis. A quarterly monitoring report will be prepared for submittal in August." (Sun) 8/1/2008 - Project reassigned to Feng. 1/21/2009 - Quarterly Monitoring Report, 4/2008 - 7/2008, 10/3/2008, by ACT. The site is occupied by a ten-story residential apartment building. A remedial program was started 3/12/2008 consisting of an active SVE and treatment system and an active sub-slab depressurization system and treatment system. There are 3 vacuum probes VP-1 to VP-3 for monitoring sub-slab vacuum monthly and Groundwater monitoring wells MW-01 and MW-03 for quarterly monitoring, are located in the cellar floor. Additional monitoring well RW-01 is located in the first floor treatment room. A circuit breaker malfunctioned on the B-200 SVE blower causing it to remain off since 5/30/2008. The two SVE manifolds were joined together. Increased pressure in the B-100 carbon units required the B-100 SVE blower to be shut down until the problem could be resolved. Average DTW 11.71 feet. 4 wells were sampled on 4/28/2008. BTEX range 600 ug/L in MW-01 to 9,842 ug/L in MW-02. MTBE range from 23.1 ug/L in MW-01 to 229 ug/L in MW-02. (RJF) 1/26/2009 - Letter to Paul Bregianos (Arc Electrical and Mechanical). DEC requires 1) explanation of the reason why groundwater treatment is missing, 2) surrounding map, 3) delineation work plan for offsite. Investigation work plan include addressing the above comments by 3/16/2009. (RJF) 10/1/2009 - Site Status Report for 2/2009 to 7/2009, dated 9/2/2009, by Advanced Cleanup Technology. On July 16, 2009, a low flow pump test was performed on RW-01. Groundwater recharge is relatively fast. On July 22, 2009, the configuration of the SSD and SVE piping was modified by connecting the casing to RW-01 and the influent piping from the SSD system to the influent piping for SVE Blower B-100. The modified configuration was operated for a few days when high room temp required shut down of the B-100 blower. The ball valves for the SSD piping were re-directed to the 5.5 Hp B-300 blower which was turned on. The B-100 blower was turned off until ambient temp decrease this fall. DTW 13.53' in MW-02 to 14.05' in MW-01. DTW in RW-01 was 22.84'. Groundwater was sampled on 7/22/2009. BTEX range 177 ug/L in MW-01 to 7,200 ug/L in MW-03. MTBE range 15 ug/L in MW-01 to 76 ug/L in MW-03. Will continue monthly system operation,

maintenance and monitoring and quarterly groundwater sampling. (RJF)
5/19/2010 - received inquiry regarding the two monitoring wells in front of the 355 Butler Street. The two wells were installed back in 5/2005, sampled once during installation, but no included in the quarterly. 6/1/2010 - email to Paul Steward (ACT) for information on these two wells, and required site plan with all the wells, their monitoring data and contour map in the next quarterly. 11/4/10. Site Status Report was due in early September 2010. Breen 11/20/10. Sent e-mail to Paul Steward asking for status reports subsequent to 9-2-09. Not reported

Alias Comments: Not reported

Site Description: The Gowanus Canal runs through a highly developed area in Brooklyn, New York, and is impacted by contaminated sediments, principally due to activities of former Manufactured Gas Plants (MGPs). Surface sediments contain PCBs at levels up to 350 ppm, and coal tar residue up to 23% by weight of sample.

Site Description:	<p>This site is located in a commercial/industrial area within 70 feet of the Gowanus Canal, which empties into the Gowanus Bay of the New York Harbor. Approximately 10,000 people live within a half-mile radius of the site. The potable water supply for the area is the New York City reservoir system. Information received in a letter dated November 24, 1982, from the Brooklyn District Attorney's Office, indicates hazardous wastes were disposed of at the foot of 17th and 18th streets, off Hamilton Ave. in Brooklyn. The piers at the end of these streets behind Jetto Foods were filled in from 1974 to 1979. It is alleged that also over this period of time (1974 - 1979), hazardous wastes were regularly spread on the landfill during the night. Field work for the Phase II State Superfund investigation was completed, in 1989, to address the possibility of soil and groundwater contamination from on-site activities and to determine whether hazardous wastes had been released to the environment. The Phase II Investigation had five test borings drilled onsite, three of these were converted into monitoring wells. One well contained 1,2 dichlorobenzene at low concentrations. A supplemental site investigation workplan by the NYSDEC was approved in December, 1992; fieldwork was completed in spring of 1993. A review of additional information with supporting documentation provided by the PRP indicates that we are unable to pinpoint the source of contamination. Based on this, the site will be delist</p>

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

one point, the main site features included 19 buildings, five designated tank farms and a wastewater pretreatment system. However, the site has been substantially decommissioned. Current Zoning/Use(s): The site is zoned for industrial use, but is currently mostly unoccupied. Some light manufacturing (stone countertops) takes place on site. The surrounding parcels are currently used for a combination of commercial, light industrial and recreational uses. The site is bordered immediately to the east by Court Street, Brooklyn Union Gas and Spentonbush Red Star Companies, to the west by Clinton Street and American Import Export Trucking and to the south by Bryant Street and Hess Oil Company. A recreational park (Red Hook Recreational) is located immediately to the north of the site. Historical Use(s) Milliken Brothers Iron Works occupied the southwestern portion of the site in 1904. The remaining property was occupied by Barrett plant from 1904 to 1949 for the manufacturing of tar paper. In 1939 John F. McKenna, Inc. Lumber Yard, Marine Canvas Supply Corporation and John Menton Boiler Maker occupied the site. The site remained a lumberyard and marine canvas supply business until approximately 1958, when manufacturing at the site began. Historic manufacturing processes at the site include production of metallic-organic soaps and salts, phosphates and epoxy plasticizers. A hot-oil system, that used PCB containing oil, was part of the manufacturing process. Contamination at the site appears related to several historic operations, including materials handling from the tar paper operation and the various manufacturing processes, as well as releases to the environment from the hot oil system. Phase I and Phase II Site Assessments were completed in the late 1990 s, and corrective action was initiated under the RCRA program. The current owner of the property - Chemtura Corporation - filed for bankruptcy in 2010. During the bankruptcy process, an Order on Consent was obtained with Chemtura along with funding to continue the remedial process. The remedial program for this site will be completed through the Superfund program. Site Geology and Hydrogeology: The site was formed by backfilling the marsh and waterfront areas of the Gowanus Canal in the late 1800s through the early 1900s. Fill material consisting of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.) was observed across the site from ground surface to a depth of 12 ft. Underlying the fill materials, a clay layer was encountered with lateral continuity across the site. This layer (former base of the Gowanus Canal) acts as a low permeability barrier between the overlying fill and the underlying water-bearing zone located within the glacial deposits beneath the site. Based on the manmade coastline (rip-rap, pile sheeting), well gauging data and the generalized hydrogeological cross-sections, a horizontal and somewhat radial (north, northwest, west, southwest, south) pathway for groundwater flow exists. Depth to water beneath the site has ranged from 2.0 ft to 9.0-ft bgs over the course of investigation. Groundwater beneath the site does not appear to be tidally influenced. Not reported

Env Problem:

Nature and Extent of Contamination: Based on investigations conducted to date, the primary contaminants of concern at the site include petroleum related compounds, phenolic compounds, and PCBs. BTEX is found in soil from the ground surface to the water table throughout a significant portion of the site. Xylenes were detected at concentrations up to 560 ppm (UUSCO of 1.6 ppm); benzene was detected as high as 5.3 ppm (UUSCO of 0.06 ppm.) The highest concentrations of

Map ID

WITCO CORP (Continued)

1001485652

xylene is located at the east side of building 14 and north of building 19. The SVOCs phenol; 2,4-dichlorophenol and naphthalene are found in soil from the ground surface to the water table throughout the center of the site. SVOCs, carcinogenic PAHs and metals related to historic fill are found throughout the site. Carcinogenic PAHs (up to 100 ppm) and metals (4370 ppm for lead; 1420 ppm for Barium and 305 ppm for cadmium) were detected well above UUSCOs. PCBs are found in soil at concentrations as high as 320 ppm. PCB contamination is located near buildings 13 and 14 in the north and northwestern part of the property where the hot oil system was located and operated. Contaminated soil is a source of groundwater contamination. Benzene is found in groundwater above the groundwater standard of 1 ppb at concentrations as high as 3,400 ppb. SVOCs in soil from the use of tar in the manufacturing of tar paper are of a source of groundwater contamination. For example, naphthalene is found in groundwater as high as 5,500 ppb (groundwater standard 10 ppb.) Non-aqueous phase material, in the form of tar and less viscous oil, is found in the environment.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. However, people could come into contact with contaminants if they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur in the existing buildings will be investigated.

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/30/2011	Source: EPA
Date Data Arrived at EDR: 07/12/2011	Telephone: N/A
Date Made Active in Reports: 09/29/2011	Last EDR Contact: 10/12/2011
Number of Days to Update: 79	Next Scheduled EDR Contact: 01/23/2012
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/30/2011	Source: EPA

Date Made Active in Reports: 09/29/2011	Last EDR Contact: 10/12/2011
Number of Days to Update: 79	Next Scheduled EDR Contact: 01/23/2012
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/25/2011	Source: EPA
Date Data Arrived at EDR: 03/01/2011	Telephone: 703-412-9810

Number of Days to Update: 36	Next Scheduled EDR Contact: 01/23/2012
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/25/2011	Source: EPA

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2011
Date Data Arrived at EDR: 07/07/2011
Date Made Active in Reports: 08/08/2011
Number of Days to Update: 32

Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/16/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/25/2011	Telephone: 703-603-0695
Date Made Active in Reports: 06/14/2011	Last EDR Contact: 09/12/2011
Number of Days to Update: 81	Next Scheduled EDR Contact: 12/26/2011
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/16/2011	Source: Environmental Protection Agency

State- and tribal - equivalent CERCLIS

SHWS: Inactive Hazardous Waste Disposal Sites in New York State

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 09/27/2011	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 09/28/2011	Telephone: 518-402-9622
Date Made Active in Reports: 10/20/2011	Last EDR Contact: 09/28/2011
Number of Days to Update: 22	Next Scheduled EDR Contact: 12/05/2011
	Data Release Frequency: Annually

VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 08/01/2011	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 08/26/2011	Telephone: 518-402-9814

State and tribal landfill and/or solid waste disposal site lists

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SWF/LF: Facility Register

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 10/11/2011
Date Data Arrived at EDR: 10/11/2011

Data Release Frequency: Semi-Annually

State and tribal leaking storage tank lists

LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Date of Government Version: 09/27/2011

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

Date Made Active in Reports: 05/27/2010	Last EDR Contact: 09/13/2011
Number of Days to Update: 41	Next Scheduled EDR Contact: 12/26/2011
	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Location Relative to TP: 0 - 1/8 Mile NNE
Site Name: Vidan Auto Salvage
Site EPA ID Number: NYD986961167
Groundwater Flow Direction: SW TOWARD THE NARROWS.
Inferred Depth to Water: approximately 38 feet.
Hydraulic Connection: The surficial aquifer and underlying aquifer are hydraulically connected.
Sole Source Aquifer: No information about a sole source aquifer is available
Data Quality: Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION</u> <u>FROM TP</u>	<u>GENERAL DIRECTION</u> <u>GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinator soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

FREEDOM OF INFORMATION ACT REQUESTS

December 14, 2011

Regional Records Access Officer
New York State Department of Environmental
Conservation, Region II
47-40 21st Street
Long Island City, New York 10035

Re: Freedom of Information Request
363 Bond Street
Brooklyn, NY

To Whom It May Concern:

P.W. Grosser Consulting, Inc. (PWGC) has been retained to prepare a Phase I Environmental Site Assessment for the property located at 363 Bond Street, Brooklyn, New York. According to the NYSDEC website, the site is identified by Spill number 04-07393.

We are requesting available copies of environmental files, records, and memoranda concerning the facility. This information should include: 1) past and present underground storage tank registration(s); 2) reported spills or releases of hazardous substances; 3) generation, storage, treatment, or disposal of hazardous substances; 4) past or present groundwater, surface water, and soil investigations; 5) environmental permits/violations.

We will gladly pay copying costs.

Please advise if this request can be accommodated in an expedient manner. We would like to schedule an appointment to copy the file/records if this is not possible.

Feel free to call with any questions or if additional information is needed to respond to this request.

Very truly yours,
PWGC
